**JUDAEO-CHRISTIAN INTELLECTUAL
CULTURE IN THE SEVENTEENTH**

CENTURY

Walter de Gruyter GmbH & Co KG

The book is constituted in four chapters, each of which addresses a specific aspect of the the physical realities of the Islamic city. The first chapter introduces issues that pertain to the dialectic relationship between buildings, cities,

and civilizations and highlights the typological processes involved. The second chapter involves a typological analysis of the Islamic houses which formed the structure of many cities including Fez, Mostar, Aleppo, and Algiers--among others. Chapter 3 addresses the physical aspects of the building tissue in the Islamic city and the dialectic relations between the building tissue and the larger contextual fabric. In chapter 4, the city is analytically described as an urban organism; it also involves methods of interpretation while at the same time concluding with the fact that Islamic cities have unique character, especially in terms of its spontaneity and intentionality.

During the past financial year, the IMF's 189 member countries faced a number of pressing challenges. IMF work on these challenges - slower trade, declining productivity, gender inequality, inclusive growth, and debt management - is a central focus of this 2017 Annual Report.

R & T ANU E Press

MURIEL MCCARTHY This volume originated from a seminar organised by Richard H. Popkin in Marsh's Library on July 7-8, 1994. It was one of the most stimulating events held in the Library in recent years. Although we have hosted many special seminars on such subjects as rare books, the Huguenots, and Irish church history, this was the first time that a seminar was held which was specifically related to the books in our own collection. It seems surprising that this type of seminar has never been held before although the reason is obvious. Since there is no printed catalogue of the Library scholars are not aware of its

contents. In fact the collection of books by late seventeenth and early eighteenth century European authors on, for example, such subjects as biblical criticism, political and religious controversy, is one of the richest parts of the Library's collections. Some years ago we were informed that of the 25,000 books in Marsh's at least 5,000 English books or books printed in England were printed between 1640 and 1700.

International Monetary Fund Annual Report 2017 History of Oriental Studies

Following on from *The Beast and the Sovereign*, Volume I, this book extends Jacques Derrida's exploration of the connections between animality and sovereignty. In this second year of the seminar, originally presented in 2002-2003 as the last course he would give before his death, Derrida focuses on two markedly different texts:

Heidegger's 1929-1930 course *The Fundamental Concepts of Metaphysics*, and Daniel Defoe's *Robinson Crusoe*. As he moves back and forth between the two works, Derrida pursues the relations between solitude, insularity, world, violence, boredom and death as they supposedly affect humans and animals in different ways. Hitherto unnoticed or underappreciated aspects of *Robinson Crusoe* are brought out in strikingly original readings of questions such as Crusoe's belief in ghosts, his learning to pray, his parrot Poll, and his reinvention of the wheel. Crusoe's terror of being buried alive or swallowed alive by beasts or cannibals gives rise to a rich and provocative reflection on death, burial, and cremation, in part provoked by a meditation on the death of Derrida's friend Maurice Blanchot. Throughout, these readings are juxtaposed with interpretations of Heidegger's concepts of world and finitude to produce a

distinctively Derridean account that will continue to surprise his readers.

THE ARMENIANS IN HISTORY AND THE ARMENIAN QUESTION

The Armenians in History and the Armenian Question

This joint venture between ICOMOS, the advisory body to UNESCO on cultural sites, and the International Astronomical Union is the second volume in an ongoing exploration of themes and issues relating to astronomical heritage in particular and to science and technology heritage in general. It examines a number of key questions relating to astronomical heritage sites and their potential recognition as World Heritage, attempting to identify what might constitute "outstanding universal value" in relation to astronomy. "Heritage Sites of Astronomy and Archaeoastronomy--Volume 2" represents the culmination of several years' work to address some of the most challenging issues raised in the first ICOMOS-IAU Thematic Study, published in 2010. These include the recognition and preservation of the value of dark skies at both cultural and natural sites and landscapes; balancing archaeoastronomical considerations in the context of broader archaeological and cultural values; the potential for serial nominations; and management issues such as preserving the integrity of astronomical sightlines through the landscape. Its case studies are developed in greater depth than those in volume 1, and generally structured as segments of draft nomination dossiers. They include seven-stone antas (prehistoric dolmens) in Portugal and Spain, the thirteen towers of Chankillo in Peru, the astronomical timing of irrigation in Oman, Pic du Midi de Bigorre

Observatory in France, Baikonur Cosmodrome in Kazakhstan, and Aoraki-Mackenzie International Dark Sky Reserve in New Zealand. A case study on Stonehenge, already a World Heritage Site, focuses on preserving the integrity of the solstitial sightlines. As for the first ICOMOS-IAU Thematic Study, a international team of authors including historians, astronomers and heritage professionals is led by Professor Clive Ruggles for the IAU and Professor Michel Cotte for ICOMOS.

Historical Dictionary of Somalia

International Monetary Fund

Now almost 20 years old, the digital turn in architecture has already gone through several stages and phases. Architectural Design (AD) has captured them all - from folding to cyberspace, nonlinearity and hypersurfaces, from versioning to scripting, emergence, information modelling and parametricism. It has recorded and interpreted the spirit of the times with vivid documentary precision, fostering and often anticipating crucial architectural and theoretical developments. This anthology of AD's most salient articles is chronologically and thematically arranged to provide a complete historical timeline of the recent rise to pre-eminence of computer-based design and production. Mario Carpo provides an astute overview of the recent history of digital design in his comprehensive introductory essay and in his leaders to each original text. A much needed pedagogical and research tool for students and scholars, this synopsis also relates the present state of digitality in architecture to the history and theory of its recent development and trends, and raises issues of crucial importance for the contemporary practice of the design professions. A comprehensive anthology on digital architecture edited

by one of its most eminent scholars in this field, Mario Carpo. Includes seminal texts by Bernard Cache, Peter Eisenman, John Frazer, Charles Jencks, Greg Lynn, Achim Menges and Patrik Schumacher. Features key works by FOA, Frank Gehry, Zaha Hadid, Ali Rahim, Lars Spuybroek/NOX, Kas Oosterhuis and SHoP.

The Roll in England and France in the Late Middle Ages John Benjamins Publishing Company

In the Middle Ages, rolls were ubiquitous as a writing support. While scholars have long examined the texts and images on rolls, they have rarely taken the manuscripts themselves into account. This volume readdresses this imbalance by focusing on the materiality and various usages of rolls in late medieval England and France. Researchers from England, France, Germany and Singapore demonstrate in 11 contributions how this approach can increase our understanding of the rolls and their contents, as well as the contexts in which they were produced and used.

Research and Technology Mrts

In this ground-breaking new study, Jacques Le Goff, arguably the leading medievalist of his generation, presents his view of the primacy of the Middle Ages in the development of European history. "[A] superb and necessary book. This provocative assessment from a lifetime of scholarship might help us to place ourselves, not just territorially, but in that other precious element of history: time." The Guardian "A book that never fails to be informative, readable and provocative. Le Goff... has been the bravest and best of champions for medieval history. This book... is in every sense an inspiration." BBC History Magazine Praised by

prominent figures in Europe and history including: Rt Hon Christopher Patten, CH, Former Member of the European Commission, and Neil Kinnock, Vice-President, European Commission. *Spectacle, Skill, and Self-Promotion in Paris During the Age of Revolution* John Wiley & Sons

The threshold as both boundary and bridge: investigations of spaces, public and private, local and global. Today, spaces no longer represent a bourgeois haven; nor are they the sites of a classical harmony between work and leisure, private and public, the local and the global. The house is not merely a home but a position for negotiations with multiple spheres—the technological as well as the physical and the psychological. In *A Topology of Everyday Constellations*, Georges Teyssot considers the intrusion of the public sphere into private space, and the blurring of notions of interior, privacy, and intimacy in our societies. He proposes that we rethink design in terms of a new definition of the practices of everyday life. Teyssot considers the door, the window, the mirror, and the screen as thresholds or interstitial spaces that divide the world in two: the outside and the inside. Thresholds, he suggests, work both as markers of boundaries and as bridges to the exterior. The stark choice between boundary and bridge creates a middle space, an in-between that holds the possibility of exchanges and encounters. If the threshold no longer separates public from private, and if we can no longer think of the house as a bastion of privacy, Teyssot asks, does the body still inhabit the house—or does the house, evolving into a series of microdevices, inhabit the body?

Modern Music and After Houghton Mifflin

Harcourt

Organized by historical period and categorized by subject, this reference covers noted scientists and inventors, inventions, scientific discoveries, technological innovations, and scientific concepts.

The Development of Mathematics Walter de Gruyter GmbH & Co KG

Innovate Bristol highlights and celebrates those companies and individuals that are actively working at building a better tomorrow for all. Innovation Ecosystems thrive through the involvement and support of companies and individuals from all industries, which is why the Innovate series not only focuses on the innovators but also those people whom the Innovation Ecosystem, would not be able to thrive without.

The Analysis of Ecstasy Tablets in a Forensic Drug Intelligence Perspective Springer

The essays in this volume shed light on how, for what purposes and to what extent the Arabic language was taught and studied by European scholars, theologian, merchants, diplomats and prisoners in early modern Europe.

THE FURNISHING OF TERRITORIES

Biblioasis

This book gathers 22 papers which were presented at the 6th International Symposium of the ICA Commission on the History of Cartography in Dubrovnik, Croatia on 13–15 October 2016. The overall conference theme was 'The Dissemination of Cartographic Knowledge: Production – Trade – Consumption – Preservation'. The book presents original research by internationally respected authors in the field of historical cartography, offering a significant contribution to the

development of this field of study, but also of geography, history and the GIS sciences. The primary target audience includes researchers, educators, postgraduate students, map librarians and archivists.

CONSTRUCTIVISM

Wiley-Blackwell

The French writer Raymond Queneau (1903-1976) is coming to be recognized as one of the major voices in 20th-century literature. Although twelve of his novels have been translated, "Chene et Chien," considered by specialists to be the keystone of his oeuvre, has not until now been available in English. Labeled a -novel in verse- by Queneau, this autobiographical poem recounts the poet's childhood, portions of that childhood revisited through psychoanalysis, and finally his joy at finding himself whole. The translator's introduction situates the work in Queneau's life and oeuvre, addresses the problem of poetry as autobiography, examines the structure of the poem itself and discusses the difficulties of translating Queneau's many moods and rich wordplay into English verse. Explanatory notes complete the volume."

THE HISTORY OF SCIENCE AND TECHNOLOGY

Shambhala Publications

The rise and fall of identical copies: digital technologies and form-making from mass customization to mass collaboration. Digital technologies have changed architecture—the way it is taught, practiced, managed, and regulated. But if the digital has created a “paradigm shift” for architecture, which paradigm is shifting? In *The Alphabet and the Algorithm*, Mario Carpo points to

one key practice of modernity: the making of identical copies. Carpo highlights two examples of identity crucial to the shaping of architectural modernity: in the fifteenth century, Leon Battista Alberti's invention of architectural design, according to which a building is an identical copy of the architect's design; and, in the nineteenth and twentieth centuries, the mass production of identical copies from mechanical master models, matrixes, imprints, or molds. The modern power of the identical, Carpo argues, came to an end with the rise of digital technologies. Everything digital is variable. In architecture, this means the end of notational limitations, of mechanical standardization, and of the Albertian, authorial way of building by design. Charting the rise and fall of the paradigm of identity, Carpo compares new forms of postindustrial digital craftsmanship to hand-making and the cultures and technologies of variations that existed before the coming of machine-made, identical copies. Carpo reviews the unfolding of digitally based design and construction from the early 1990s to the present, and suggests a new agenda for architecture in an age of variable objects and of generic and participatory authorship.

Studies on the History of Society and Culture

The volume will cover all aspects of Somalia, providing useful information about the country in a comprehensive manner. The book also reflects on the contributions of the Somali sources on history and culture. Arabic sources and other non-English colonial sources of great importance to the subject are also highlighted. A vital addition to reference collections supporting undergraduate and graduate programs on Africa and

the Middle East, international relations, and economics, and a useful fact-filled compendium for government and public libraries, NGO's, and other special libraries as well.

Intercultural Engagements with Architecture and Craft in the Age of Travel and Reform John Wiley & Sons

Time-honored study by a prominent scholar of mathematics traces decisive epochs from the evolution of mathematical ideas in ancient Egypt and Babylonia to major breakthroughs in the 19th and 20th centuries. 1945 edition.

Promoting Inclusive Growth Mitchell Beazley

A multidisciplinary index covering the journal literature of the arts and humanities. It fully covers 1,144 of the world's leading arts and humanities journals, and it indexes individually selected, relevant items from over 6,800 major science and social science journals.

Innovate Bristol Scarecrow Press

Earth Moves, Bernard Cache's first major work, conceptualizes a series of architectural images as vehicles for two important developments. First, he offers a new understanding of the architectural image itself. Following Gilles Deleuze and Henri Bergson, he develops an account of the image that is nonrepresentational and constructive—images as constituents of a primary, image world, of which subjectivity itself is a special kind of image. Second, Cache redefines architecture beyond building proper to include cinematic, pictorial, and other framings. Complementary to this classification, Cache offers what is to date the only Deleuzian architectural development of the "fold," a form and concept that has become important over the last few years. For Cache, as for

Deleuze, what is significant about the fold is that it provides a way to rethink the relationship between interior and exterior, between past and present, and between architecture and the urban.

The Journey of a Book Springer Science & Business Media

The present work has three principal objectives: (1) to fix the chronology of the development of the pre-Euclidean theory of incommensurable magnitudes beginning from the first discoveries by fifth-century Pythagoreans, advancing through the achievements of Theodorus of Cyrene, Theaetetus, Archytas and Eudoxus, and culminating in the formal theory of Elements X; (2) to correlate the stages of this developing theory with the evolution of the Elements as a whole; and (3) to establish that the high standards of rigor characteristic of this evolution were intrinsic to the

mathematicians' work. In this third point, we wish to counterbalance a prevalent thesis that the impulse toward mathematical rigor was purely a response to the dialecticians' critique of foundations; on the contrary, we shall see that not until Eudoxus does there appear work which may be described as purely foundational in its intent. Through the examination of these problems, the present work will either alter or set in a new light virtually every standard thesis about the fourth-century Greek geometry. I. THE PRE-EUCLIDEAN THEORY OF INCOMMENSURABLE MAGNITUDES The Euclidean theory of incommensurable magnitudes, as preserved in Book X of the Elements, is a synthetic masterwork. Yet there are detectable seams in its structure, seams revealed both through terminology and through the historical clues provided by the neo-Platonist commentator Proclus.
