Deep learning has already achieved remarkable results in many fields. Now it's making waves throughout the sciences broadly and the life sciences in particular. This practical book teaches developers and scientists how to use deep learning for genomics, chemistry, biophysics, microscopy, medical analysis, and other fields. Ideal for practicing developers and scientists ready to apply their skills to scientific applications such as biology, genetics, and drug discovery, this book introduces several deep network primitives. You'll follow a case study on the problem of designing new therapeutics that ties together physics, chemistry, biology, and medicine—an example that represents one of science's greatest challenges. Learn the basics of performing machine learning on molecular data Understand why deep learning is a powerful tool for genetics and genomics Apply deep learning to understand biophysical systems Get a brief introduction to machine learning with DeepChem Use deep learning to analyze microscopic images Analyze medical scans using deep learning techniques Learn about variational autoencoders and generative adversarial networks Interpret what your model is doing and how it's working

Environmental challenges have never been greater than today. There is the need for the utmost accuracy in the efforts to track the use, manufacture, processing, treatment, and disposal of toxic and hazardous materials. Legislation passed over the last twenty years has not only resulted in improved environmental quality, but has also created new levels of accountability for today's environmental professional. This book helps companies meet the ever-growing number of recordkeeping, reporting, and information-management demands. It assists the practicing professional who must keep facility records relating to the generation and management of solid and hazardous waste. Specific guidance is given on the principles of waste material tracking by point of generation and fully loaded waste management cost accounting.

This book proposes Regenerative Sanitation as the next era of sanitation management and attempts to provide a foundation for the study of sanitation on the premise that sanitation is a complex and dynamic system that comprises of social-ecological, technological and resource systems. The preconception is that sanitation will deliver maximal benefits to society only when there exists a cyclical integration of the three subsystems to enable appropriate linkages between 'technological design' and the 'delivery platform' so as to achieve optimal and sustained sanitation solutions. It also calls for the rethinking of sanitation to change the narrative towards more progressive trajectories such as resource recovery and reuse rather than just amelioration. It explores the contributions to food security, livelihood support, urban regeneration, rural development and even local economies.

A new paradigm, theory and ten principles for ensuring practical and effective sanitation solutions and management is presented. In addition is a unique conceptual framework applicable to both developed and developing countries, and to all stages, processes and cycles of delivering sanitation solutions that could critically evaluate, analyse and provide credible, adequate and appropriate sanitation solutions. All of which culminates in a strategic and practical application platform called 'Sanitation 4.0' that advocates for total rejuvenation and comprehensive overhaul with eight key strategic considerations for the implementation. Regenerative Sanitation: A New Paradigm For Sanitation 4.0 is inter and trans-disciplinary and encourages collaboration between engineers, scientists, technologists, social scientists and others to provide effective and practical user-centred solutions. It includes relevant case studies, examples, exercise and future research recommendations. It is written as both a textbook for researchers and students as well as a practitioners' guide for policymakers and professionals.

For several years now, there has been an exponential growth of the amount of life science data (e. g., sequenced complete genomes, 3D structures, DNA chips, mass spectroscopy data), most of which are generated by high-throughput experiments. This exponential corpus of data is stored and made available through a large number of databases and resources over the Web, but unfortunately still with a high degree of semantic heterogeneity and varying levels of quality. These data must be combined together and processed by bioinformatics tools deployed on powerful and efficient platforms to permit the uncovering of patterns, similarities and in general to help in the process of discovery. Analyzing complex, voluminous, and heterogeneous data and guiding the analysis of data are thus of paramount importance and necessitate the involvement of data integration techniques. DILS 2008 was the 7th in a workshop series that aims at fostering discussion, exchange, and innovation in research and development in the area of data integration for the life sciences. Each previous DILS workshop attracted around 100 researchers from all over the world and saw an increase of submitted papers over the preceding one. This year was not an exception and the number of submitted papers increased to 54. The Program Committee selected 18 of them. The selected papers cover a wide spectrum of theoretical and practical issues including data annotation, Semantic Web for the life sciences, and data mining on integrated biological data.

Self-directed learning (SDL) is considered a core concept in problem-based learning (PBL) and student-centered learning. More importantly, the current face-to-face model of curriculum implementation faces many challenges that seem to question its dominance over other models. The violent nature of the COVID-19 pandemic has again vindicated SDL practitioners and research enthusiasts to continue seeking solutions that will enhance skills to cope in a rapidly changing technological, globalized world. However, the higher education sector is challenged when promoting SDL due to a slow pace of digital integration since the education system is not fully transformed. This has necessitated an urgent need for global discourse on how universities globally are implementing SDL strategies to enhance the quality of curriculum delivery. Advancing Self-Directed Learning in Higher

Education provides insight into various strategic approaches that could be adopted for the successful implementation of SDL in higher education. It is written for professionals who want to improve their understanding of how to improve student teaching and learning and the quality of curriculum implementation in higher education. In this realm, this book provides ideas to its readers about the approaches pertaining to strategy and innovative measures, practical implementations, and tools in the field of curriculum and SDL. Covering topics such as educational technology, intentional education practice theory, and student experience, this premier reference source is an essential resource for teachers, policymakers, lecturers, research scholars, students of higher education, administrators, librarians, academicians, and researchers.

Challenges and pitfalls of co-creative methods applied to migration studies Co-creative methods are increasingly used to understand and facilitate integration processes of migrants in immigrant societies. This volume aims to contribute to the debates on the ways in which co-creative methods may advance migrant integration. More specifically, the contributions investigate how co-creative research strategies can provide insights into how integration processes into various domains of immigrant society (e.g. language learning, housing, employment) are shaped, and how they can contribute to policy making and new policy practices. Because co-creative methods are relatively new approaches to research and policy making, the authors evaluate and demonstrate the pitfalls and benefits of using them. Starting with a theoretical and methodological overview of co-creative methods, empirical chapters document and critically assess ongoing research experiences and studies to incorporate co-creative methods in academic research across Europe. Co-creation in Migration Studies analyses the use of co-creative methods in migrant research and policy making, reflects upon the conditions required to successfully implement these methods, and offers new insights and recommendations for future research and policy making practices.

Citizen science, the active participation of the public in scientific research projects, is a rapidly expanding field in open science and open innovation. It provides an integrated model of public knowledge production and engagement with science. As a growing worldwide phenomenon, it is invigorated by evolving new technologies that connect people easily and effectively with the scientific community. Catalysed by citizens' wishes to be actively involved in scientific processes, as a result of recent societal trends, it also offers contributions to the rise in tertiary education. In addition, citizen science provides a valuable tool for citizens to play a more active role in sustainable development. This book identifies and explains the role of citizen science within innovation in science and society, and as a vibrant and productive science-policy interface. The scope of this volume is global, geared towards identifying solutions and lessons to be applied across science, practice and policy. The chapters consider the role of citizen science in the context of the wider agenda of open science and open innovation, and discuss progress towards responsible research and innovation, two of the most critical aspects of science today.

This title is directed primarily towards health care professionals outside of the United States. Applying the RLT Model in Practice has been written to enable students and their teachers in both Higher Education and clinical practice to explore the different dimensions of the model through a variety of case studies and exercises. The case studies can be viewed as 'triggers' for student problem-solving skills in using the Model. Many of the exercises are aimed at enabling readers to find evidence to support nursing activities. The authors have incorporated an international perspective throughout the text. Based on the most popular model used in general nursing care throughout the world Explicitly demonstrates how the RLT model can be used to assess, plan, deliver and evaluate individualised nursing care Applies the RLT model in the context of today's health services and links it to clinical governance and the multi-disciplinary context of care Uses a problem solving approach with extensive use of exercises and case studies Attractive two-colour design using boxes, tables and summaries Fully updated throughout in line with changes in practice, developments in the evidence base, changes in the NHS e.g. modern matrons, Modernisation Agency etc More material on how to apply the model in an inter disciplinary context Updated infection control section More on discharge planning More material relating to primary care
