Praise for *Educating Nurses* "This book represents a call to arms, a call for nursing educators and programs to step up in our preparation of nurses. This book will incite controversy, wonderful debate, and dialogue among nurses and others. It is a must-read for every nurse educator and for every nurse that yearns for nursing to acknowledge and reach for the real difference that nursing can make in safety and quality in health care." —Beverly Malone, chief executive officer, National League for Nursing "This book describes specific steps that will enable a new system to improve both nursing formation and patient care. It provides a timely and essential element to health care reform." —David C. Leach, former executive director, Accreditation Council for

Graduate Medical Education "The ideas about caregiving developed here make a profoundly philosophical and intellectually innovative contribution to medicine as well as all healing professions, and to anyone concerned with ethics. This groundbreaking work is both paradigm-shifting and delightful to read." —Jodi Halpern, author, *From Detached Concern to Empathy: Humanizing Medical Practice* "This book is a landmark work in professional education! It is a must-read for all practicing and aspiring nurse educators, administrators, policy makers, and, yes, nursing students." —Christine A. Tanner, senior editor, *Journal of Nursing Education* "This work has profound implications for nurse executives and frontline managers." —Eloise Balasco Cathcart, coordinator, Graduate Program in Nursing Administration, New York University

Incorporate the principles of "Novice to Expert" into your classroom Nearly thirty years ago, Pearson published Patricia Benner's groundbreaking work, "From

Novice to Expert," which outlined principles that have continued to be the cornerstone of major transformative efforts in nursing education. And now, Pearson has partnered with Dr. Benner to bring nurse educators a robust digital learning solution that empowers them to make the ideals of transforming novice learners to practice-ready professionals a reality for today's nursing students. Based on the definitive work of the Florence Nightingale of our time, Dr. Patricia Benner, and on the urgent calls for educational transformation from the Carnegie Foundation, the Robert Wood Johnson Foundation with the Institutes of Medicine, and the Quality and Safety for Education of Nurses reports, NovEx is a digital-first, situated learning solution designed to help educators move beyond a focus on developing students' critical thinking abilities and help prepare students that can "clinically" reason and problem-solve like a real nurse. With its completely immersive learning environment, students are able to apply knowledge as they acquire it. NovEx's unfolding, patient cases provide practice-centered experiences that enrich the learning of essential content, while its evidence-based content prepares new nurses with the most clinically-salient knowledge to safely care for patients. <http://www.pearsonhighered.com/novex/>

Of all the qualitative research methods, none has provoked more interest among nurses than phenomenological research. As part of Pam Brink's nuts and bolts series on research methods for nurses, this volume will provide a much needed introduction to this methodology including discussions on site-access, preparation, proposal-writing, ethical issues, data collections, bias reduction, data analysis, and research publication.

"The authors demonstrate how U. S. nurses have worked throughout their history to restore patients to health, teach health promotion, and participate in disease preventing activities. Recounting those experiences in the nurses' own words, the authors bring that history to life, capturing nurses' thoughts and feelings during times of war, epidemics, and disasters as well as during their everyday work. The book fills a gap in the secondary literature on...the history of nursing that can be useful in these times of great social change. It is a "must read" for every nurse in the United States!" --Barbra Mann Wall, PhD, RN, FAAN; Director of the Eleanor Crowder Bjoring Center for Nursing Historical Inquiry; University of Virginia; From the Foreword For over four hundred years, a diverse array of nurses, nurses' aides, midwives, and public-minded citizens across the United States have attended to the healthcare of America's equally diverse populations. Beginning in 1607 when the first Englishmen landed in Virginia, and concluding in 2016 when Flint, Michigan, was declared to be in a state of emergency, this expansive nursing history text for undergraduate and graduate nursing programs examines the history of the nursing profession to better understand how nursing became what it is today. Grounded in the premise that health care can and should be promoted in partnership with communities to provide quality care for all, this history analyzes the resilience and innovation of nurses who provided care for the most underprivileged populations, such as slaves on Southern plantations, immigrants in tenements in Manhattan's Lower East Side, and isolated populations in rural Kentucky. It takes into account issues of race, class, and gender and the influence of these factors on nurses and patients. Featuring nearly 300 photos, oral histories, and case examples from varied settings in the United States and beyond, the narrative discusses major medical advances, prominent leaders and grassroots movements in nursing, and ethical dilemmas that nurses faced with each change in the profession. Chapters include discussion questions for class sessions as well as a list of suggested readings. Key Features: Examines the history of nursing during the last four centuries Links challenges for nurses in the past to those of present-day nurses Includes oral histories, case examples, boxed highlights, call-outs, discussion questions, archival sites, and references Covers drugs, technological innovations, and scientific discovery in each era Demonstrates progression toward "A Culture of Health" as described by the Robert Wood Johnson Foundation.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a

profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

*Nursing Theories: A Framework for Professional Practice* Jones & Bartlett Publishers

This contributed book is based on more than 20 years of researches on patient individuality, care and services of the continuously changing healthcare system. It describes how research results can be used to respond to challenges on individuality in healthcare systems. Service users', patients' or clients' point of views on care and health services are urgently needed. This book describes the conceptualisation of the

individualized nursing care phenomenon and the process development of the measuring instruments of that phenomenon in different contexts. It describes results from a variety of clinical contexts about individualized nursing care and explains factors associated with the perceptions and delivery of individualized nursing care from different point of views. This book may appeal to clinicians, nurses practitioners and researchers from many fields.

*Nursing Theorists and Their Work* World Scientific

By combining stories of care, the reflections of caregiving practitioners, and interpretations of caregiving within a larger social and theoretical framework, this collection identifies the values and skills involved in quality caregiving at the individual level and affirms their importance for reshaping our public caregiving institutions. Contributors from the fields of medicine, nursing, teaching, ministry, sociology, psychotherapy, theology, and philosophy articulate their values, hopes, commitments, and practices both in theoretical essays and in narratives of caregiving that reveal the complexities of skillful practice.

Core Curriculum for Oncology Nursing John Wiley & Sons

Research shows that the sharing of personal, first-hand stories not only enhances learning and eases the transition to a new role, but also helps novice educators to understand that their challenges are shared by others. With the goal of improving the experience of nurses transitioning from clinician to educator, in hospitals as well as schools of nursing, this unique book presents the stories of nurses who made this transition. It presents the findings of several qualitative studies addressing the question, "What is the lived experience of clinicians as they assume new roles as clinical nurse educators?" These narratives describe the challenges they faced and transformations in each nurse's identity and relationships during the transition process. The text includes recommendations from the Carnegie Foundation for the Advancement of Teaching and specific problem-solving strategies that have worked for others. The narratives are from nurse clinicians, nurse educators, and students who provide insights into such common dilemmas faced by novice educators as "How do I keep a patient safe while allowing the student nurse to practice a skill for the first time?" "If a student is slow to catch on to a procedure, how long do I wait before they fail?" "How do I help provide a safe and effective learning environment for new graduate nurses?" The book includes stories of students who describe caring and uncaring experiences with clinical nurse educators. Stories address cultural diversity, bullying, and dilemmas related to critical and ethical thinking. Nurse educators themselves share insights into what they wish they had done differently to guide students and new graduate nurses in their learning. While these storytellers had diverse clinical and educational backgrounds, there were consistent similarities between the experiences they described. One common thread was the need to embrace the role of a novice in order to succeed. The book will serve as a valuable text for graduate students in nurse educator courses as well as students and nurses seeking support, insight, and inspiration in their transition to the clinical nurse educator role. Key Features: Presents experiential narratives from nurses who made the transition from clinician to educator Describes important aspects of a nurse's transition from the role of clinical expert to that of novice educator Includes research-based insights in a highly accessible style and format Integrates National League for Nursing Core Competencies into the text Provides inspiring, helpful, and comforting guidance for nurse clinicians feeling lost or confused in a new role
