#### A LIFE ON OUR PLANET

Random House Trade Paperbacks

Now the subject of the hit documentary *Scotty and the Secret History of Hollywood*, praised by *Vanity Fair* as “full of revelations” and *Entertainment Weekly* as “deliciously salacious,” *Full Service* is the remarkable true story of Scotty Bowers, the “gentleman hustler,” during the heyday of classic Hollywood. Newly discharged from the Marines after World War II, Bowers arrived in Hollywood in 1946. Young, charismatic, and strikingly handsome, he quickly caught the eye of many of the town’s stars and starlets. He began sleeping with some himself, and connecting others with his coterie of young, attractive, and sexually free-spirited friends. His own lovers included Edith Piaf, Spencer Tracy, Vivien Leigh, Cary Grant, and the abdicated King of England Edward VIII, and he arranged tricks or otherwise crossed paths with Tennessee Williams, Charles Laughton, Vincent Price, Katharine Hepburn, Rita Hayworth, Errol Flynn, Gloria Swanson, Noël Coward, Mae West, James Dean, Rock Hudson and J. Edgar Hoover, to name but a few. *Full Service* is not only a fascinating chronicle of Hollywood’s sexual underground, but also exposes the hypocrisy of the major studios, who used actors to propagate a myth of a conformist, sexually innocent America knowing full well that their stars’ personal lives differed dramatically from this family-friendly mold. As revelation-filled as *Hollywood Babylon*, *Full Service* provides a lost chapter in the history of the sexual revolution and is a testament to a man who provided sex, support, and affection to countless people.

**The Secret Life of Plants** Skyhorse Publishing, Inc.

This book,a fascinating companion to *The Secret Life of Plants* by the same authors, tells the story of the innovative, nontraditional, often surprising things that certain scientists, farmers, and mystics are doing to prevent the slow degradation of our planet. For example, using the techniques of Rudolf Steiner’s biodynamic agriculture with its reliance on ethereal forces from the planets,Dan Carlson’s growth stimulating *Sonic Bloom*, and rock dust fertilizer to revitalize depleted soils; or gardening with the help of truly amazing new technologies to reverse serious agricultural problems.The authors illustrate,in a truly enlightening and convincing manner, the pivotal role that the natural elements play in our lives, and the necessity of cultivating and sustaining a relationship with one most basic of them the soil.

*The Reluctant Spy* Vintage

The world of plants and its relation to mankind as revealed by the latest scientific discoveries. "Plenty of hard facts and astounding scientific and practical lore."--Newsweek

**The Secret Life of Water** Penguin

“Pollan shines a light on our own nature as well as on our implication in the natural world.” —The New York Times “A wry, informed pastoral.” —The New Yorker The book that helped make Michael Pollan, the New York Times bestselling author of *How to Change Your Mind*, *Cooked* and *The Omnivore’s Dilemma*, one of the most trusted food experts in America Every schoolchild learns about the mutually beneficial dance of honeybees and flowers: The bee collects nectar and pollen to make honey and, in the process, spreads the flowers’ genes far and wide. In *The Botany of Desire*, Michael Pollan ingeniously demonstrates how people and domesticated plants have formed a similarly reciprocal relationship. He masterfully links four fundamental human desires—sweetness, beauty, intoxication, and control—with the plants that satisfy them: the apple, the tulip, marijuana, and the potato. In telling the stories of four familiar species, Pollan illustrates how the plants have evolved to satisfy humankind’s most basic yearnings. And just as we’ve benefited from these plants, we have also done well by them. So who is really domesticating whom?

**The Secret Life of Germs** Chelsea Green Publishing

Examines the threats caused by an exploding level of germ infections, from the common cold to flesh-eating bacteria; offers ways to protect against infection; and discusses the media, germ warfare, and the importance of germs.

#### THE SECRET LIFE OF GROCERIES

Random House

Shows how plants avoid predators, find food, increase their territory, reproduce, and obtain sunlight

#### SEEDS OF HOPE

Vintage

How our collective intelligence has helped us to evolve and prosper Humans are a puzzling species. On the one hand, we struggle to survive on our own in the wild, often failing to overcome even basic challenges, like obtaining food, building shelters, or avoiding predators. On the other hand, human groups have produced ingenious technologies, sophisticated languages, and complex institutions that have permitted us to successfully expand into a vast range of diverse environments. What has enabled us to dominate the globe, more than any other species, while remaining virtually

helpless as lone individuals? This book shows that the secret of our success lies not in our innate intelligence, but in our collective brains—on the ability of human groups to socially interconnect and learn from one another over generations. Drawing insights from lost European explorers, clever chimpanzees, mobile hunter-gatherers, neuroscientific findings, ancient bones, and the human genome, Joseph Henrich demonstrates how our collective brains have propelled our species' genetic evolution and shaped our biology. Our early capacities for learning from others produced many cultural innovations, such as fire, cooking, water containers, plant knowledge, and projectile weapons, which in turn drove the expansion of our brains and altered our physiology, anatomy, and psychology in crucial ways. Later on, some collective brains generated and recombined powerful concepts, such as the lever, wheel, screw, and writing, while also creating the institutions that continue to alter our motivations and perceptions. Henrich shows how our genetics and biology are inextricably interwoven with cultural evolution, and how culture-gene interactions launched our species on an extraordinary evolutionary trajectory. Tracking clues from our ancient past to the present, *The Secret of Our Success* explores how the evolution of both our cultural and social natures produce a collective intelligence that explains both our species' immense success and the origins of human uniqueness.

*The Secret Life of Cows* Grand Central Publishing

Sunday Times Bestseller 'A paradigm-smashing chronicle of joyous entanglement' Charles Foster Waterstones Non-Fiction Book of the Month (September) Are trees social beings? How do trees live? Do they feel pain or have awareness of their surroundings?

*The Secret Life of Plants* Timber Press

From the New York Times-bestselling author of *The Hidden Life of Trees*. "The Inner Life of Animals will rock your world. This book shows us that animals think, feel and know in much the same way as we do."—Sy Montgomery, bestselling author of *The Soul of an Octopus* Through vivid stories of devoted pigs, two-timing magpies, and scheming roosters, *The Inner Life of Animals* weaves the latest scientific research into how animals interact with the world with Peter Wohlleben's personal experiences in forests and fields. We learn that horses feel shame, deer grieve, and goats discipline their kids. Ravens call their friends by name, rats regret bad choices, and butterflies choose the very best places for their children to grow up. In this captivating book, Peter Wohlleben follows the hugely successful *The Hidden Life of Trees* with insightful stories into the emotions, feelings, and intelligence of animals around us. Animals are different from us in ways that amaze us—and they are also much closer to us than we ever would have thought. "Wry, avuncular, careful and kind. . . Each story adds to a widening vision of intelligence, emotion and relationship."—The Guardian Published in Partnership with the David Suzuki Institute

*The Fabric of the Cosmos* Dorling Kindersley Ltd

The idea that plants have a mind of their own has been a prominent feature of some Indigenous narratives, literary works, and philosophical discourses. Recent scientific research in the field of plant cognition similarly highlights the capacity of botanical life to discern between options and learn from prior experiences or, in other words, to think. *The Mind of Plants* offers an accessible account of the idea of "the plant mind" by bringing together short essays and poems on plants and their interactions with humans. The texts interpret the theme broadly—from the ways that humans mind and unmind plants to the mindedness or unmindedness of plants themselves. Authors from the humanities, social sciences, and natural sciences have written about their personal connections to particular plants, reflecting upon their research on plant studies in a style amenable to a broad audience. Each of the authors has selected a plant that functions as a guiding thread to their interpretation of "the mind of plants." From the ubiquitous rose to the ugly hornwort, from the Amazonian ayahuasca to tobacco, the texts reflect the multifarious interactions between humans and flora. These personal narratives, filled with anecdotes, experiences, and musings, offer cutting-edge insights into the different meanings and dimensions of "the mind of plants." Contributors to *The Mind of Plants* are key figures in the fields of ethnobotany, ethnopharmacology, plant behavior and cognition, and critical plant studies. Included are simple, thumbnail-style, black-and-white illustrations of the plants to enhance readers' appreciation of the narratives.

**The Man Who Never Was** Princeton University Press

NEW YORK TIMES BESTSELLER • A "brilliant [and] entrancing" (The Guardian) journey into the hidden lives of fungi—the great connectors of the living world—and their astonishing and intimate roles in human life, with the power to heal our bodies, expand our minds, and help us address our most urgent environmental problems. "Grand and dizzying in how thoroughly it recalibrates our understanding of the natural world."—Ed Yong, author of *I Contain Multitudes* ONE OF THE BEST BOOKS OF THE YEAR—Time, BBC Science Focus, The Daily Mail, Geographical, The Times, The Telegraph, New Statesman, London Evening Standard, Science Friday When we think of fungi, we likely think of mushrooms. But mushrooms are only fruiting bodies, analogous to apples on a tree. Most fungi live out of sight, yet make up a massively diverse kingdom of organisms that supports and sustains nearly all living systems. Fungi provide a key to understanding the planet on which we live, and the ways we think, feel, and behave. In *Entangled Life*, the brilliant young biologist Merlin Sheldrake shows us the world from a fungal point of view, providing an exhilarating change of perspective. Sheldrake's vivid exploration takes us from yeast to psychedelics, to the fungi that range for miles underground and are the largest organisms on the planet, to those that link plants together in complex networks known as the "Wood Wide Web," to those that infiltrate and manipulate insect bodies with devastating precision. Fungi throw our concepts of individuality and even intelligence into question. They are metabolic masters, earth makers, and key players in most of life's processes. They can change our minds, heal our bodies, and even help us remediate environmental disaster. By examining fungi on their own terms, Sheldrake reveals how these extraordinary organisms—and our relationships with them—are changing our understanding of how life works. Winner of the Wainwright Prize, the Royal Society Science Book Prize, and the Guild of Food Writers Award • Shortlisted for the British Book Award • Longlisted for the Rathbones Folio Prize

## THE INNER LIFE OF ANIMALS

Springer

The eighteenth-century naturalist Erasmus Darwin (grandfather of Charles) argued that plants are animate, living beings and attributed them sensation, movement, and a certain degree of mental activity, emphasizing the continuity between humankind and plant existence. Two centuries

later, the understanding of plants as active and communicative organisms has reemerged in such diverse fields as plant neurobiology, philosophical posthumanism, and ecocriticism. *The Language of Plants* brings together groundbreaking essays from across the disciplines to foster a dialogue between the biological sciences and the humanities and to reconsider our relation to the vegetal world in new ethical and political terms. Viewing plants as sophisticated information-processing organisms with complex communication strategies (they can sense and respond to environmental cues and play an active role in their own survival and reproduction through chemical languages) radically transforms our notion of plants as unresponsive beings, ready to be instrumentally appropriated. By providing multifaceted understandings of plants, informed by the latest developments in evolutionary ecology, the philosophy of biology, and ecocritical theory, *The Language of Plants* promotes the freedom of imagination necessary for a new ecological awareness and more sustainable interactions with diverse life forms. Contributors: Joni Adamson, Arizona State U; Nancy E. Baker, Sarah Lawrence College; Karen L. F. Houle, U of Guelph; Luce Irigaray, Centre National de la Recherche Scientifique, Paris; Erin James, U of Idaho; Richard Karban, U of California at Davis; André Kessler, Cornell U; Isabel Kranz, U of Vienna; Michael Marder, U of the Basque Country (UPV-EHU); Timothy Morton, Rice U; Christian Nansen, U of California at Davis; Robert A. Raguso, Cornell U; Catriona Sandilands, York U.

**Secrets of the Soil** BenBella Books

From New York Times bestselling author and world-renowned scientist Jane Goodall, as seen in the National Geographic documentary *Jane*, comes a fascinating examination of the critical role that trees and plants play in our world. *Seeds of Hope* takes us from Goodall's home in England to her home-away-from-home in Africa, deep inside the Gombe forest, where she and the chimpanzees are enchanted by the fig and plum trees they encounter. She introduces us to botanists around the world, as well as places where hope for plants can be found, such as The Millennium Seed Bank. She shows us the secret world of plants with all their mysteries and potential for healing our bodies as well as Planet Earth. Looking at the world as an adventurer, scientist, and devotee of sustainable foods and gardening—and setting forth simple goals we can all take to protect the plants around us—Goodall delivers an enlightening story of the wonders we can find in our own backyards.

## BREAKING BOUNDARIES

books catalog

INTERNATIONAL BESTSELLER • A contemporary literary classic and "an accomplished psychological thriller ... absolutely chilling" (Village Voice), from the Pulitzer Prize-winning author of *The Goldfinch*. Under the influence of a charismatic classics professor, a group of clever, eccentric misfits at a New England college discover a way of thought and life a world away from their banal contemporaries. But their search for the transcendent leads them down a dangerous path, beyond human constructs of morality.

## THE LANGUAGE OF PLANTS

HarperCollins

NEW YORK TIMES BEST SELLER • From the world's leading forest ecologist who forever changed how people view trees and their connections to one another and to other living things in the forest—a moving, deeply personal journey of discovery Suzanne Simard is a pioneer on the frontier of plant communication and intelligence; her TED talks have been viewed by more than 10 million people worldwide. In this, her first book, now available in paperback, Simard brings us into her world, the intimate world of the trees, in which she brilliantly illuminates the fascinating and vital truths—that trees are not simply the source of timber or pulp, but are a complicated, interdependent circle of life; that forests are social, cooperative creatures connected through underground networks by which trees communicate their vitality and vulnerabilities with communal lives not that different from our own. Simard writes—in inspiring, illuminating, and accessible ways—how trees, living side by side for hundreds of years, have evolved, how they learn and adapt their behaviors, recognize neighbors, compete and cooperate with one another with sophistication, characteristics ascribed to human intelligence, traits that are the essence of civil societies—and at the center of it all, the Mother Trees: the mysterious, powerful forces that connect and sustain the others that surround them. And Simard writes of her own life, born and raised into a logging world in the rainforests of British Columbia, of her days as a child spent cataloging the trees from the forest and how she came to love and respect them. And as she writes of her scientific quest, she writes of her own journey, making us understand how deeply human scientific inquiry exists beyond data and technology, that it is about understanding who we are and our place in the world.

## PRIMARY PERCEPTION

Simon and Schuster

A BuzzFeed "Best Book of June 2021" From sixteen-year-old Dara McAnulty, a globally renowned figure in the youth climate activist movement, comes a memoir about loving the natural world and fighting to save it. *Diary of a Young Naturalist* chronicles the turning of a year in Dara's Northern Ireland home patch. Beginning in spring—when "the sparrows dig the moss from the guttering and the air is as puffed out as the robin's chest—these diary entries about his connection to wildlife and the way he sees the world are vivid, evocative, and moving. As well as Dara's intense connection to the natural world, *Diary of a Young Naturalist* captures his perspective as a teenager juggling exams, friendships, and a life of campaigning. We see his close-knit family, the disruptions of moving and changing schools, and the complexities of living with autism. "In writing this book," writes Dara, "I have experienced challenges but also felt incredible joy, wonder, curiosity and excitement. In sharing this journey my hope is that people of all generations will not only understand autism a little more but also appreciate a child's eye view on our delicate and changing biosphere." Winner of the Wainwright Prize for UK nature writing and already sold into more than a dozen territories, *Diary of a Young Naturalist* is a triumphant debut from an important new voice.

*Finding the Mother Tree* Harper Collins

Long before the waterboarding controversy exploded in the media, one CIA agent had already gone public. In a groundbreaking 2007 interview with ABC News, John Kiriakou called waterboarding torture—but admitted that it probably worked. This book, at once a confessional, an adventure story,

and a chronicle of Kiriakou's life in the CIA, stands as an important, eloquent piece of testimony from a committed American patriot. In February 2002 Kiriakou was the head of counterterrorism in Pakistan. Under his command, in a spectacular raid coordinated with Pakistani agents and the CIA's best intelligence analyst, Kiriakou's field officers took down the infamous terrorist Abu Zubaydah. For days, Kiriakou became the wounded terrorist's personal "bodyguard." In circumstances stranger than fiction, as al-Qaeda agents scoured the streets for their captured leader, the best trauma surgeon in America was flown to Pakistan to make sure that Zubaydah did not die. In *The Reluctant Spy*, Kiriakou takes us into the fight against an enemy fueled by fanaticism. He chillingly describes what it was like inside the CIA headquarters on the morning of 9/11, the agency leaders who stepped up and those who protected their careers. And in what may be the book's most shocking revelation, he describes how the White House made plans to invade Iraq a full year before the CIA knew about it—or could attempt to stop it. Chronicling both mind-boggling mistakes and heroic acts of individual courage, *The Reluctant Spy* is essential reading for anyone who wishes to understand the inner workings of the U.S. intelligence apparatus, the truth behind the torture debate, and the incredible dedication of ordinary men and women doing one of the most extraordinary jobs on earth.

From Brian Greene, one of the world's leading physicists and author of the Pulitzer Prize finalist *The Elegant Universe*, comes a grand tour of the universe that makes us look at reality in a completely different way. Space and time form the very fabric of the cosmos. Yet they remain among the most mysterious of concepts. Is space an entity? Why does time have a direction? Could the universe exist without space and time? Can we travel to the past? Greene has set himself a daunting task: to explain non-intuitive, mathematical concepts like String Theory, the Heisenberg Uncertainty Principle, and Inflationary Cosmology with analogies drawn from common experience. From Newton's unchanging realm in which space and time are absolute, to Einstein's fluid conception of spacetime, to quantum mechanics' entangled arena where vastly distant objects can instantaneously coordinate their behavior, Greene takes us all, regardless of our scientific backgrounds, on an irresistible and revelatory journey to the new layers of reality that modern physics has discovered lying just beneath the surface of our everyday world.

**What a Plant Knows** Macmillan

Analyzes a series of public domain documents which demonstrate how the government has misled the public, engaging in deception about the objectives and scope of some of its programs and perpetuating wasteful spending and harmful cover-ups.
