The Textbook of Non-Medical Prescribing addresses all the key issues relevant to non-medical prescribing, bringing together essential knowledge, key issues, and skills in a single text. This accessible, engaging and comprehensive resource explores the history of non-medical prescribing; prescribing in context; ethical, legal and professional issues in relation to prescribing practice; factors influencing prescribing; effective consultations; essential

pharmacology; the role of the multi-disciplinary team; clinical skills; prescribing for specific groups; and the future of nurse prescribing. With case studies throughout, The Textbook of Non-Medical Prescribing is essential reading for all students on non-medical prescribing courses. It is also of use to qualified health professionals, be they prescribers themselves or interested in the concepts of non-medical prescribing.

The role and function of the nurse is rapidly changing. Some nurses are now required to undertake clinical diagnosis of the patient, a responsibility traditionally undertaken by a doctor. Clinical Diagnosis helps prepare nurses to fulfill this role, providing them with the skills and underpinning knowledge to make clinical diagnoses of patients effectively. Each chapter follows the same layout for each symptom or sign, exploring the

definition, causes, history, precipitating factors, associated signs and symptoms, important considerations, relevant clinical examination, and investigations and tests. The first UK text to explore clinical diagnosis from a nursing perspective In the Essential Clinical Skills for Nurses series Written by an authority in the field Concise, accessible, and evidence-based

There are times when what a youngster does or says is absolutely baffling to mom or dad. How can 15-year-old Sarah spend hours prepping her hair and not give one second to cleaning her room? Likewise, what's wrong with 10-year-old Mark who knows he shouldn't bully his little brother but does so anyway? Certainly parents want answers, and no one is surprised when a parent falls back on interrogating a child or teen with repeated "Why?" or "What were you thinking?"

questions. Unfortunately, searching for the reasons children behave as they do by asking the ubiquitous "Why?" is ultimately unsuccessful and, frankly, irrelevant. "I don't know," "Because," or "I wasn't thinking," is the usual child response, resulting in frustrated parents and youngsters who feel embarrassed, stupid or annoyed. Drs. Charles C. Larson and John B. Dockstader, each with more than thirty years of experience working with parents and youngsters, advise parents to step back from situations such as those described and offer, instead, techniques for evaluating and solving family problems without needing to know "Why?".

The authors counsel parents how to determine if a problem exists, who owns the problem and who is best equipped to solve it. Numerous real-life examples are presented to illustrate the

problem-solving process and solutions. In Parenting Without Guilt, parents learn not only to solve family problems, but also why the challenges parents and youngsters face today are more demanding than ever before. In addition, parents are guided through each stage of child development, from birth to young adulthood, with attention to typical problems any parent may anticipate. Resources that parents can use to help them resolve family discords are discussed, to include working with educators, clergy, pediatricians, private practitioners and others. With compassion, humor and wisdom gained through practical experience, Drs. Larson and Dockstader offer information and advice that provides any parent with the skills to raise successful children without guilt, anxiety or distress.

Prescribing has traditionally been the responsibility of medical doctors but independent prescribing courses are now firmly established in the UK and increasing numbers of healthcare professionals have taken on prescribing responsibilities. The Prescribing Pharmacist reflects these changes, beginning with an overview of pharmacist prescribing and continuing with an exploration of consultation, patient clinical assessment, team working, and understanding cultural and religious issues and ethics. Internal and external influences on the new prescriber are considered, as well as medicines optimisation. The authors also look at prescribing for specific patient groups, such as the elderly, the very young, pregnant women and breast-feeding women, and finally move on to specific medicines that require special care when prescribing. Each chapter of the book refers and links to the

Royal Pharmaceutical Society framework written in 2016, A Competency Framework for All Prescribers, which is reproduced, with permission. Written by a team of pharmacy experts, this book is intended for any pharmacist who is thinking of becoming an independent prescriber, those on pharmacy courses and those who are already qualified as independent or supplementary pharmacist prescribers, who may use it as a reminder of important points covered on their course. Contents include:

- List of abbreviations
- An introduction to pharmacist prescribing
- The consultation, diagnostic process, diagnosis and influences on prescribing
- Patient clinical assessment
- Patient partnership and prescribing
- Prescribing for specific groups of patients
- Medicines requiring particular care when prescribing
- Appendix 1: A Competency Framework for All Prescribers

This book is designed to bring the far-flung facts about Communism into a single volume. It contains a distillation of more than one hundred books and treatises—many of them written by Communist authors. It attempts to present the Communist in his true native elements, stripped of propaganda and pretense. Hence, the title, *The Naked Communist*. A panoramic study of Communism might easily degenerate into a long list of dates, names, and platitudes without helping the student to gain a genuine understanding of the history and philosophy of Marxist thought and Communism. Therefore, in this book, an attempt has been made to present Communism as the living, breathing force in the earth which it really is. The political development, the philosophy, the economic theory and the big names in international Communism have all been presented in

their historical setting. This eBook includes the original index, illustrations, footnotes, table of contents and page numbering from the printed format.

Increasingly, primary care professionals are faced with challenges in dealing with patients who have been affected by a genetic disorder, or whose family history is of concern. A basic understanding of clinical genetics and the role of the genetics centres leads to greater confidence in the management of these patients. This book is an ideal introduction to the principles of genetics. It outlines the key influences that will affect primary care including screening programmes, the role of genetics education (such as the RCGP Genetics Curriculum) and national guidelines. It provides information on basic clinical genetics and includes some of the more common clinical genetic conditions seen in primary care, such as cystic fibrosis, breast cancer and the haemoglobinopathies. It addresses some of the key ethical issues that may be faced including patient confidentiality, the ethics of reproductive genetic medicine and relevant medico-legal cases. The wider societal impact of genetics is also discussed. An introduction to the increasing impact of genetics into primary care, this book is invaluable for every primary healthcare professional.

'...a unique book, written by a unique GP. There is no-one better placed to pull together decades of learning and experience on

how to achieve the greatest success in the general practice consultation. The relaxed pace of writing, the accessible examples, the clear narrative and the engaging anecdotes make this a resource that it is accessible and useful to all who seek to improve their clinical consulting skills.' Helen Stokes-Lampard, former Chair of the Royal College of General Practitioners This brand-new book aims to help GPs establish ways of thinking, talking and behaving in the consultation that are most likely to lead to good outcomes. It describes a simple three-part approach to the consultation's essential task, which is to convert a patient's problem into a plan acceptable to both patient and doctor. It combines reader-friendly explanations, helpful illustrations and examples from everyday practice. Key features: Written by a respected GP, teacher, and author of the highly-regarded trilogy *The Inner Consultation*, *The Inner Apprentice* and *The Inner Physician* Gives GPs a framework for consulting that is easy to remember, comprehensive, adaptable, robust, exam-friendly and quickly becomes second nature Identifies and addresses key areas of anxiety for GP trainees and MRCGP candidates, including 'How do I complete in 10 minutes?', 'How do I deal with difficult patients?' and 'What do I do when it all goes pear-shaped and I don't know what to do?' Gives advice and practical suggestions for how to make the difficult transition from theory to practice, from reading about the consultation to actually doing it better in real life Consulting in a Nutshell will help GPs at every career stage - from medical student to CSA candidate to experienced practitioner - to analyse, develop and grow their personal consulting style. Coming at a time of profound change in primary care, it aims to ensure that seeing

patients and having good consultations becomes and remains a source of satisfaction and fulfilment. The author: Roger Neighbour is a retired GP, former Convenor of the Panel of MRCGP Examiners, and past President, Royal College of General Practitioners, UK.

Neighbour the Inner Consultation Radcliffe Publishing Highly Commended at the British Medical Association Book Awards 2016 Clinical Communication in Medicine brings together the theories, models and evidence that underpin effective healthcare communication in one accessible volume. Endorsed and developed by members of the UK Council of Clinical Communication in Undergraduate Medical Education, it traces the subject to its primary disciplinary origins, looking at how it is practised, taught and learned today, as well as considering future directions. Focusing on three key areas - the doctor-patient relationship, core components of clinical communication, and effective teaching and assessment - Clinical Communication in Medicine enhances the understanding of effective communication. It links theory to teaching, so principles and practice are clearly understood. Clinical Communication in Medicine is a new and definitive guide for professionals involved in the education of medical undergraduate students and postgraduate trainees, as well as experienced and junior clinicians, researchers, teachers, students, and policy makers.

This new volume in the SCM Research series argues that both preaching and Action Research are inherently exposing practices. They require a deep level of self-consciousness, and a willingness to hold oneself up to critique and comment. But at their best they

are both formed within a deep and supportive critical community. Applying a methodology rooted in Action Research as way of Doing Theology (ART), and drawn from the author's own research within a specific 'community of practice', "The Naked Preacher" demonstrates for preachers and ministers new ways to be critically and constructively self-aware. It also offers an important contribution for practical theologians with an interest in action research and critical reflection.

"Peter's thoughtful model will hopefully enable future practitioners of medicine to argue against any retrograde move towards paternalism and authoritarianism."- Jonathan Silverman, author of Skills for Communicating with Patients, from the Foreword. This inspirational guide provides an innovative framework for understanding the consultation. It is concise, easy-to-read and highly accessible, presenting a simple and easily remembered non-linear diagram which facilitates the understanding of this richly complex process. Inspired by the work of Balint, it beautifully reflects the narrative of the

The GP Consultation Reimagined is a new and creative way of thinking about the consultation in primary care, based on the author's experience of teaching communication skills over 10 years as a GP Training Programme Director. The book features a unique Two Houses model to help the reader move away from completing a series of tasks to focusing on the two key objectives at the heart of every consultation: \* Working out what matters (The House of Discovery) \* Deciding with the patient what to do about it (The House of Decision) Using the rich metaphors contained within these houses, the book explores common pitfalls that can beset those who are learning the craft of

consulting in primary care, and encourages the reader to fill their toolbox with the skills needed to develop their own patient-centred consultation style. "This book will not teach you to improve your consultations. That is its great merit. Instead, it will encourage you to learn how to consult better." From the Foreword by Roger Neighbour

The Consultation, published almost 20 years ago by the same authors, has been completely rewritten. The New Consultation will be an essential aid for all doctors and their educators to increase the effectiveness of their consultations and to help to make them more patient-centred. It includes theoretical background as well as practical help for both consulters and teachers. The consultation is 'the central act of medicine': the meeting between the patient and the doctor. The first part of the book takes the reader from the context of the consultation in society and with the medical profession, to the intimacy of the consulting room, and then delves into its processes. The reader is invited to share the individual perspectives of doctor and patient and to consider what will lead to positive outcomes. The last

chapter of the first section puts all these factors together and provides a coherent, evidence-based description of the processes needed for an effective consultation for the patient, the doctor, and society. The second part of the book takes the reader into the practicalities of learning and teaching effective consultations. It starts with a brief description of the evidence for effective teaching and outlines the authors' experience of teaching in this way with over 1,000 doctors. Realizing that many doctors organize their own self-directed learning, the authors have included a chapter that enables individuals to develop their own consulting technique. Help is offered for teachers of the consultation in both undergraduate and postgraduate settings. The consultation is now assessed by a number of the royal medical colleges to measure competence and there is a chapter on these issues. The last chapter discusses the difficulties that many doctors still have in conducting patient-centred consultations and makes some suggestions for effective implementation of skills.

The average attention span today has dropped to 8 seconds (which means you may want to send out detailed bullet points reviewing what was discussed at your last staff meeting). With more distractions today than ever before for the average person, it has become as difficult as it's ever been to get a message across. To get heard in this ADD-filled, phone-addicted culture, one must focus their message, be slightly different, and deliver with finesse. In *You've Got 8 Seconds*, high-stakes communications expert Paul Hellman uses fast, fun, actionable

tips to explain what works and what doesn't, what's forgettable and what sticks, when it comes to getting your message to land. With stories, scripts, and examples of both good and bad messages, the book reveals three main strategies for getting your point across: • FOCUS: Design a strong message--then communicate it in seconds • VARIETY: Make routine information come alive • PRESENCE: Convey confidence and command attention Hellman also shares many practical techniques that have been proven successful, including his very own Focus Method™ that he uses with leadership teams; 10 actions that spell executive presence; and his own unique plan for how to stand out in the first seconds of a presentation. Get their attention. Get understood. Get results!
