OMB No. 9136041897842 edited by

NICHOLSON MYLA

A CATALOGUE OF BRITISH PLANTS ARRANGED ACCORDING TO THE NATURAL SYSTEM, WITH THE SYNONYMS OF DE CANDOLLE, SMITH, AND LINDLEY

Edward Elgar Publishing

First published in 2005, this book represents the first full length biography of John Phillips, one of the most remarkable and important scientists of the Victorian period. Adopting a broad chronological approach, this book not only traces the development of Phillips' career but clarifies and highlights his role within Victorian culture, shedding light on many wider themes. It explores how Phillips' love of science was inseparable from his need to earn a living and develop a career which could sustain him. Hence questions of power, authority, reputation and patronage were central to Phillips' career and scientific work. Drawing on a wealth of primary sources and a rich body of recent writings on Victorian science, this biography brings together his personal story with the scientific theories and developments of the day, and fixes them firmly within the context of wider society.

Routledge Revivals: John Phillips and the Business of Victorian Science (2005) Routledge

More than 775 models of Smith & Wesson guns produced since 1857 are listed according to model and year of manufacture with updated prices in up to five grades of condition. Includes a range of serial numbers for each year of manufacture. This is the most comprehensive list of Smith & Wesson products and prices available.

Monthly Catalog of United States Government Publications Property Markets and the State in Adam Smith's System

This book, first published in 1987, is an attempt to explain Adam Smith's theory of property. The author examines Smith's theory in the context of The Wealth of Nations, and explores what Smith said, what he really meant, and what can be logically deduced from it. This title will be of interest to students of economic thought.

Integrated Safe Driving Information System Development: Catalog of available materials Routledge

The first published catalogue of a fossil collection arranged using a stratigraphic system, first published in 1817.

A Selected Bibliography of Significant Works About Adam Smith Routledge

The two-hundredth anniversary in 1976 of the publication of An Inquiry into the Nature and Causes of the Wealth of Nations emphasized the already evident new interest in the relationship between Smith's social and political thought and his economic theory. Only recently have economists turned their attention to Smith's other works, long overshadowed by the more renowned The Wealth of Nations. Martha Lightwood here argues that A Theory of Moral Sentiments actually laid the philosophic groundwork for The Wealth of Nations and emphasizes that Smith's writings, considered in their totality, represent a compelling interest not solely in economics but in philosophy and the study of society. Selected for this bibliography are major contributions and representative studies on three aspects of Smith's work: moral philosophy, the history of the development of scientific methodology, and political economy.

Catalog of Copyright Entries. Part 1. [B] Group 2. Pamphlets, Etc. New Series University of Pennsylvania Press

Designed as a beginning, how-to guide, this handbook lists 20 short steps to cataloging library materials for a church or synagogue library. The guide opens with a history and a brief explanation of the Dewey Decimal System, with special attention given to the divisions and subdivisions that fall under the category "Religion." Several references on the Dewey Decimal System are recommended for further reading. The section on step-by-step processing covers initial procedures such as opening the book properly, collating the book, and stamping the library name in it before progressing to the more complicated tasks of selecting subject headings (from the Sears List of Subject Headings), typing the catalog cards, and keeping statistics. Following the 20 processing steps are 14 sample catalog cards showing: (1) the back and front of a work card; (2) main entry cards; and (3) a card set, including author, title, subtitle, subject, and series; and (4) a shelf list card among others. A glossary of 38 common cataloging terms is included. (SD)

New Perspectives on Adam Smith's The Theory of Moral Sentiments Bryn Mawr, PA : Church and Synagogue Library Association

John Phillips was one of the most remarkable and important scientists of the Victorian period. Orphaned at the age of seven and brought up by his uncle, he rose to hold a number of highly prestigious posts within the British academic and scientific community, despite lacking a university education. By the time of his death in 1874 he was widely regarded as one of the pioneers and champions of the science of geology, yet until now there has been no full length biography of Phillips. In rectifying this lacuna, Jack Morrell has produced a meticulous and magisterial piece of scholarship that does justice to the achievements and legacy of John Phillips. Adopting a broadly chronological approach, the book not only traces the development of Phillips's career but clarifies and highlights his role within Victorian culture, shedding light on many wider themes. It explores how Phillips' love of science was inseparable from his need to earn a living and develop a career which could sustain him. Hence questions of power, authority, reputation and patronage were central to Phillips's career and scientific work. Drawing on a wealth of primary sources and a rich body of recent writings on Victorian science, this biography provides a fascinating and compelling account of John Phillips and his legacy. Pulling together his personal story with the scientific theories and developments of the day, and fixing them firmly within the context of wider society, this biography will be vital reading for anyone with an interest in the history of British and nineteenth-century science.
