Circulating Tumor Cells New Haven : Yale University Press

Marking a complete break with previous scholarship in the field, this book rewrites the history of early Chan (Zen) Buddhism, focusing on the genealogy and doctrine of one of its dominant strains, the so-called Northern school that flourished at the turn of the eighth century. The traditional interpretation of the Northern school was heavily influenced by the polemics of one of its opponents, the monk Shenhiu, who characterized the Northern school's teaching as propounding the belief that enlightenment occurred gradually, was measurable, and could be expressed in conventional language. To all this, Shenhiu and his teaching of "sudden enlightenment" were opposed, and Shenhiu's school and its version of history would later prevail. On the basis of documents found at Dunhuang, this book shows how the traditional view is incorrect, that Shenhiu's imposition of a debate between gradual and sudden conceals the doctrinal continuity between the two schools and the diversity of Chan thought in the period. The author buttresses his conclusions by placing the evolution of early Chan in the intellectual, political, social, and economic context of the mid-Tang. The book is in three parts. The first part treats the biography and thought of the "founder" of the Northern school, Shenxiu, the nature of his followers, and his affinities for Buddhist scholasticism. The second part studies the way in which the Northern school, after Shenxiu, adapted to new circumstances: changes in imperial policies, the rise of rival schools, and changes in the nature of its followers. The third part focuses on the internecine struggles around the genealogy of Chan as reflected in the *Lengqie shizi ji* (Record of the Masters and Disciples of the Lankavatara [School]) by the monk Jingjue. A close reading of this work reveals that it foreshadowed many of the themes and issues that would later come to the forefront in Zen, and contributes significantly to our reassessment of the teachings and practices of "pre-classical" Chan.

Chivalry--"with its pageants, heraldry, and knights in shining armor--"was a social ideal that had a profound influence on the history of early modern Europe. In this eloquent and richly detailed book, a leading medieval historian discusses the complex reality of chivalry: its secular foundations, the effects of the Crusades, the literature of Knighthood, and its ethos of the social and moral obligations of nobility.

The French writer Raymond Queneau (1903-1976) is coming to be recognized as one of the major voices in 20th-century literature. Although twelve of his novels have been translated, "Chene et Chien," considered by specialists to be the keystone of his oeuvre, has not until now been available in English. Labeled a -novel in verse- by Queneau, this autobiographical poem recounts the poet's childhood, portions of that childhood revisited through psychoanalysis, and finally his joy at finding himself whole. The translator's introduction situates the work in Queneau's life and oeuvre,

addresses the problem of poetry as autobiography, examines the structure of the poem itself and discusses the difficulties of translating Queneau's many moods and rich wordplay into English verse. Explanatory notes complete the volume."

Islamic Psychology or ilm an-nafs (science of the soul) is an important introductory textbook drawing on the latest evidence in the sub-disciplines of psychology to provide a balanced and comprehensive view of human nature, behaviour and experience. Its foundation to develop theories about human nature is based upon the writings of the Qur'an, Sunna, Muslim scholars and contemporary research findings. Synthesising contemporary empirical psychology and Islamic psychology, this book is holistic in both nature and process and includes the physical, psychological, social and spiritual dimensions of human behaviour and experience. Through a broad and comprehensive scope, the book addresses three main areas: Context, perspectives and the clinical applications of applied psychology from an Islamic approach. This book is a core text on Islamic psychology for undergraduate and postgraduate students and those undertaking continuing professional development in Islamic psychology, psychotherapy and counselling. Beyond this, it is also a good supporting resource for teachers and lecturers in this field.

Over the past two decades there has been an explosion in knowledge about the molecular pathology of human diseases which accelerated with the sequencing of the human genome in 2003. Molecular diagnostics and molecular targeted therapy have contributed to the current concept of personalized patient care that is now routine in many medical centers. As a result, general and subspecialty pathologists, clinical practitioners of all types and radiologists must now have an understanding of the basic concepts of molecular pathology and their role in new diagnostic and therapeutic applications to patient care. The Molecular Pathology Library series was created to bridge the gap between traditional basic science textbooks in molecular biology and traditional medical textbooks

for organ-specific diseases. *Basic Concepts of Molecular Pathology* is designed as a stand-alone book to provide the pathologist, clinician or radiologist with a concise review of the essential terminology, concepts and tools of molecular biology that are applied to the understanding, diagnosis and treatment of human diseases in the age of personalized medicine. Those medical practitioners, residents, fellows and students who need to refer to the terminology and concepts of molecular pathology in their patient care will find the *Basic Concepts of Molecular Pathology* to be a succinct, portable, user-friendly aid in their practice and studies. The service-based physician will find this handy reference to be valuable at the laboratory benchside, at the patient bedside, at multidisciplinary patient care conferences or as a review for examinations.

This volume explores various approaches for enrichment, detection, isolation, and molecular profiling of circulating tumor cells (CTCs). Each chapter provides comprehensive descriptions and guidelines on how to perform innovative experiments in CTC research. Included are protocols for capture of CTCs via filtration and density gradient centrifugation; microfluidic and immunomagnetic separation of CTCs; detection of CTCs by immunocytochemistry, fluorescence in situ hybridization, and flow cytometry; assays designed for genomic characterization and functional analyses of CTCs, and many more. Written in the highly successful *Methods in Molecular Biology* series format, the chapters in this book include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and authoritative, *Circulating Tumor Cells: Methods and Protocols* is a valuable resource for laboratory researchers and clinicians who are interested in furthering their studies on CTCs.

In *Invention of the first-century synagogue*, Lidia D. Matassa critically reevaluates the scholarship surrounding the identification of first-century synagogues at five key sites: Delos, Jericho, Herodium, Masada, and Gamla. These sites are consistently used in modern scholarship as comparators for all other early synagogues. Matassa reviews the scholarly discourse concerning each site, inspects each site, and examines the excavation reports in conjunction with a thorough analysis of the literary and epigraphic evidence. She uncovers misunderstandings of the site remains by previous scholars and concludes that excavators incorrectly identified synagogues at Delos, Jericho, Masada, and Herodium. After a clear review of the material evidence, Matassa concludes that the

identification of a synagogue at Gamla may be correct.--Back cover.

The popular image of Scotland is dominated by widely recognized elements of Celtic culture. But a significant non-Celtic influence on Scotland's history has been largely ignored for centuries? This book argues that much of Scotland's history and culture from 1100 forward is Jewish. The authors provide evidence that many of the national heroes, villains, rulers, nobles, traders, merchants, bishops, guild members, burgesses, and ministers of Scotland were of Jewish descent, their ancestors originating in France and Spain. Much of the traditional historical account of Scotland, it is proposed, rests on fundamental interpretive errors, perpetuated in order to affirm Scotland's identity as a Celtic, Christian society. A more accurate and profound understanding of Scottish history has thus been buried. The authors' wide-ranging research includes examination of census records, archaeological artifacts, castle carvings, cemetery inscriptions, religious seals, coinage, burgess and guild member rolls, noble genealogies, family crests, portraiture, and geographic place names.

"*Dunhuang Manuscript Culture*" explores the world of Chinese manuscripts from ninth-tenth century Dunhuang, an oasis city along the network of pre-modern routes known today collectively as the Silk Roads. The manuscripts have been discovered in 1900 in a sealed-off side-chamber of a Buddhist cave temple, where they had lain undisturbed for for almost nine hundred years. The discovery comprised tens of thousands of texts, written in over twenty different languages and scripts, including Chinese, Tibetan, Old Uighur, Khotanese, Sogdian and Sanskrit. This study centres around four groups of manuscripts from the mid-ninth to the late tenth centuries, a period when the region was an independent kingdom ruled by local families. The central argument is that the manuscripts attest to the unique cultural diversity of the region during this period, exhibiting—alongside obvious Chinese elements—the heavy influence of Central Asian cultures. As a result, it was much less 'Chinese' than commonly portrayed in modern scholarship. The book makes a contribution to the study of cultural and linguistic interaction along the Silk Roads.

Nevada has never had a published architectural history, and *Temples of Justice* helps fill the gap by treating the state's built environment as a series of documents from the past. By looking at the courthouses collectively, it is possible to understand the choices and influences that have affected Nevada's communities as they seek to protect an image of themselves and their aspirations through public architecture.
