In mathematics, a partial differential equation is an equation which imposes relations between the various partial derivatives of a multivariable function. The function is often thought of as an "unknown" to be solved for, similarly to how x is thought of as an unknown number, to be solved for, in an algebraic equation like $x^2 - 3x + 2 = 0$. Partial Differential Equations: An Introduction, 2nd Edition

The left hand side of this equation is called the functional derivative of $J[f]$ and is denoted $\delta J/\delta f(x)$. In general this gives a second-order ordinary differential equation which can be solved to obtain the extremal function $f(x)$. The Euler-Lagrange equation is a necessary, but not sufficient, condition for an extremum $J[f]$.
