MATHEWS RICE

Elsevier Health Sciences

A practical approach to the field of androgen excess or deprivation in women's health. The content includes multiple viewpoints on the most common disorders in this class, such as polycystic ovary disease, hirsutism and menopausal issues. Each chapter provides a combination of long-lasting clinical principles in the diagnosis and management of these patients along with a state-of-the-art review. This text takes an innovative approach to uncommon conditions (such as congenital adrenal hyperplasia, transgender conditions). In addition to presenting clinical insights, and a review of the basic science underpinning these conditions, it focuses on key concepts that can be derived from these rare conditions to the entire field. This book is an essential addition to the library for any busy clinician who is looking for a practical reference guide but also for the sub-specialist who is

looking for new and thought-provoking insights in this complex scientific area.

Speroff's Clinical Gynecologic Endocrinology and Infertility

Cambridge University Press

Provide the best care possible with expert insight and clinically relevant coverage of the physiologic changes that occur throughout all major periods of the perinatal experience - prenatal, intrapartum, postpartum, and neonatal. *Maternal, Fetal & Neonatal Physiology: A Clinical Perspective, 4th Edition* gives you a solid foundation for assessment and therapeutic interventions, featuring an emphasis on the evolving interrelationships between mother, fetus, and neonate and adaptations of preterm and term infants to the extrauterine environment. Solid coverage of the physiologic bases for assessment and therapeutic interventions make this an ideal resource for advanced practice. Synthesis of the latest research studies and evidence-based practice provides vital data on normal physiologic changes during the antepartum, intrapartum and postpartum periods; anatomic and functional development of the fetus; and developmental physiology of preterm and term

neonates. Pharmacology tables offer quick access to key pharmacology information and drug effects with clinical examples. Coverage of pathophysiology and interventions for the pregnant woman, fetus, and newborn for selected abnormal events provides a solid understanding of physiologic adaptations and developmental physiology relating to major body systems and metabolic processes. Comprehensive tables, diagrams, and illustrations highlight important concepts and summarize key information. Thoroughly updated content offers the very latest evidence-based information, contemporary research, and clinical developments related to maternal, fetal, and neonatal physiology. New coverage on the late pre-term infant provides the most current practice guidelines to promote quality care. Expanded discussions of reproductive processes reflect cutting-edge research and the clinical implications of physiologic and genetic effects brought to bear from both the female and the male. Extensive and reliable web sources allow for further study or checking for updated information. New NICHD standard definitions on fetal monitoring enable you to identify fetal heart rate patterns using standardized nomenclature.

Infertility, Assisted Reproductive Technologies and Hormone Assays Springer

A groundbreaking contribution to the literature now in its revised and expanded second edition, this textbook offers a comprehensive review of diagnostic and treatment techniques for male infertility. This state-of-the-art, evidence-based textbook incorporates new multidisciplinary and complementary medicine approaches to create a first-of-its-kind guide to treatment strategies for male infertility and beyond. While this new edition

is primarily designed as a reference for students and residents in reproductive medicine and andrology, it will be equally useful as well for professionals in urology, reproductive endocrinology, embryology, and research fields who are interested in the role that antioxidants play in male infertility. World-renowned experts in these areas have been selected to participate in this work. Careful selection of the highest quality content will span the whole range of topics in the area of male infertility, providing a complete review of well-established and current diagnostic and treatment techniques for male infertility. The incorporation of 20 new chapters will enhance the book's appeal by including the most recent advances brought to the male infertility arena. Additionally, this edition incorporates new features, including bulleted key points, review criteria and select video clips demonstrating some of the most fascinating male infertility treatment modalities. A dedicated new section on current guidelines on male infertility will enlighten readers on how to most optimally manage male infertility clinical scenarios. Covering all aspects of diagnosis and management, ART, lifestyle factors and associated conditions for male infertility, *Male Infertility: Contemporary Clinical Approaches, Andrology, ART and Antioxidants* will be a readily accessible, high quality reference for medical students and residents, and will be of significant value to professionals working in the various fields treating this condition as well.

The Boston IVF Handbook of Infertility Cambridge University Press
This is a high-level, clinical reference by world-class specialists on the efficacy of hormone replacement therapy for the primary prevention of cardiovascular risk in postmenopausal women.

Specific chapters cover pulsed estrogen therapy with Aerodiol and cardiovascular risk assessment in postmenopausal hormone replacement therapies such as Livial (tibolone). This volume is based on the formal presentations and subsequent discussions that took place at the International Menopause Society specially convened Expert Workshop on Hormone Replacement Therapy and Cardiovascular Disease, London, UK, October 13-16, 2000.

Neuroendocrinology of Reproduction Springer Science & Business Media

Thoroughly revised and now enhanced with color artwork, this new edition offers the latest information on the diagnosis and management of reproductive endocrine disorders. As an Expert Consult title, it includes convenient online access to the complete text of the book along with all of the images and references linked to Medline.

Yen and Jaffe's Reproductive Endocrinology Elsevier Health Sciences

Yen & Jaffe's Reproductive Endocrinology Elsevier Health Sciences

Hormonal dysfunction can have a major and often complex impact on all key components of the metabolic syndrome. This book comprises state-of-the-art reviews on the subject written by recognized experts in the field of endocrinology. Each chapter covers specific manifestations associated with the metabolic syndrome in classic endocrine diseases. Compelling questions are highlighted and future directions presented. The topics covered include hypopituitarism, adrenal insufficiency, acromegaly, glucocorticoid excess, androgen excess, hypogonadism,

prolactin, and thyroid and parathyroid hormone abnormalities. This book is meant to inspire subsequent research related to metabolic complications in endocrine diseases, thus enabling early detection as well as prompt and appropriate management.

Yen & Jaffe's Reproductive Endocrinology Elsevier Health Sciences

It has been over 50 years since Hans Selye formulated his concept of stress. This came after the isolation of epinephrine and norepinephrine and after the sympathetic system was associated with Walter Cannon's "fight or flight" response. The intervening years have witnessed a number of discoveries that have furthered our understanding of the mechanisms of the stress response. The isolation, identification and manufacture of glucocorticoids, the identification and synthesis of ACTH and vasopressin, and the demonstration of hypothalamic regulation of ACTH secretion were pivotal discoveries. The recent identification and synthesis of CRH by Willie Vale and his colleagues gave new impetus to stress research. Several new concepts of stress have developed as a result of advances in bench research. These include the concept of an integrated "stress system", the realization that there are bi-directional effects between stress and the immune system, the suggestion that a number of common psychiatric disorders represent dysregulation of systems responding to stress, and the epidemiologic association of stress with the major scourges of humanity.

ANDROGENS IN GYNECOLOGICAL PRACTICE

Springer Nature

A concise and innovative account of clinical neuroendocrine

disorders and the key principles underlying their diagnosis and management.

Maternal, Fetal, & Neonatal Physiology 4 Springer Science & Business Media

One of the world's most widely read gynecology texts for nearly 50 years, Speroff's *Clinical Gynecologic Endocrinology and Infertility* provides a complete explanation of the female endocrine system and offers practical guidance for evaluation and treatment of common disorders. In this fully revised ninth edition, the editorial and author team from Yale School of Medicine have assumed the reins of Dr. Speroff's landmark work, retaining the clear, concise writing style and illustrations that clarify and explain complex concepts. This classic text remains indispensable for students, residents, and clinicians working in reproductive endocrinology and infertility, bringing readers up to date with recent advances that have occurred in this fast-changing field.

REPRODUCTIVE ENDOCRINOLOGY

Cambridge University Press

"Now celebrating its 40th anniversary, Yen & Jaffe's *Reproductive Endocrinology*, 8th Edition, by Drs. Jerome F. Strauss III, Robert L. Barbieri, and Antonio R. Gargiulo, keeps you up to date with the latest information on the diagnosis and management of the full range of female and male reproductive disorders. This cornerstone text thoroughly covers both basic science and clinical practice, making it a one-stop reference for all reproductive issues, including impaired fertility, infertility, recurrent pregnancy loss, problems of sexual development,

menstrual disturbances, fibroids, endometriosis, female and male reproductive aging, fertility preservation, assisted reproduction technologies including ovarian stimulation and ovulation induction, transgender hormonal treatment, and contraception. Every chapter has been completely revised and updated to reflect important changes in this fast-moving field"--Publisher's description.

Male Infertility Elsevier Health Sciences

Androgen Excess Disorders in Women Yen and Jaffe's *Reproductive Endocrinology*

The subject of this book is neuroendocrinology, that branch of biological science devoted to the interactions between the two major integrative organ systems of animals—the endocrine and nervous systems. Although this science today reflects a fusion of endocrinology and neurobiology, this synthetic approach is relatively recent. At the beginning of the 20th century, when the British physiologists, Bayliss and Starling, first proposed endocrinology to be an independent field of inquiry, they went to great lengths to establish the autonomy of chemical secretions in general and their independence from nervous control in particular (Bayliss, W. M., and Starling, E. H., 1902, *The mechanism of pancreatic secretion*, *J. Physiol.* 28:325). They argued with Pavlov, who said that there was a strong influence of the nervous system on the gastrointestinal phenomena the endocrinologists were studying. For several decades, the English physiologists prevailed, at least in the West; and Pavlov's critique was not taken to heart by the practitioners of the newly emerging discipline of endocrinology. Through the work of Harris, the

Scharrers, Sawyer, Everett, and others, there has been something of a scientific detente in the latter half of this century; the hybrid field of neuroendocrinology is now regarded as one of the corner stones of modern neural science and is of fundamental importance in basic and clinical endocrinology.

THE REPRODUCTIVE SYSTEM AT A GLANCE

Lippincott Williams & Wilkins

This valuable new addition to the Encyclopaedia of Sports Medicine series provides a comprehensive and logical look at the principles and mechanisms of endocrinology as related to sports and exercise. It looks at growth hormone factors involved in exercise and the endocrinology of sport competition. It considers various factors and stresses on the body that may alter sporting performance. It covers topics from the acute responses and chronic adaptations of the human endocrine system to the muscular activity involved in conditioning exercise, physical labor, and sport activities. This book is an essential reference for helping to plan better programs of physical fitness, to prepare for sports competitions, and to manage the medical care of athletes. *Hormone Replacement Therapy and Cardiovascular Disease*
Springer Science & Business Media

Now celebrating its 40th anniversary, Yen & Jaffe's Reproductive Endocrinology, 8th Edition, by Drs. Jerome F. Strauss III, Robert L. Barbieri, and Antonio R. Gargiulo, keeps you up to date with the latest information on the diagnosis and management of the full range of female and male reproductive disorders. This cornerstone text thoroughly covers both basic science and clinical practice, making it a one-stop reference for all

reproductive issues, including impaired fertility, infertility, recurrent pregnancy loss, problems of sexual development, menstrual disturbances, fibroids, endometriosis, female and male reproductive aging, fertility preservation, assisted reproduction technologies including ovarian stimulation and ovulation induction, transgender hormonal treatment, and contraception. Every chapter has been completely revised and updated to reflect important changes in this fast-moving field. Provides the knowledge and expertise of global experts who draw on the latest developments in the field to keep you abreast of current science and practice in endocrinology. Coverage includes molecular, cellular, and genetic concepts and their relevance to pathophysiology, diagnosis, and therapy. Features new bulleted lists under major headings in each chapter for quick, at-a-glance summaries of every section.

Reproductive Endocrinology W. W. Norton & Company

Infertility is a major public health concern and medical condition that afflicts millions globally. As such, many people seek reproductive care with the goal of receiving a proper diagnosis and a successful outcome using assisted reproductive technology (ART). *Infertility: Assisted Methods of Reproduction and Hormonal Assays* provides an overview of ART methods and discusses recent trends in the field. Chapters cover an array of topics including diagnosis of infertility using hormonal assays, adverse outcomes of ART, oocyte donation, cryopreservation of oocytes and embryos and psychosocial care.

YEN & JAFFE'S REPRODUCTIVE ENDOCRINOLOGY E-BOOK

John Wiley & Sons

Autism and Other Neurodevelopmental Disorders gathers and organizes the most recent information in this important and rapidly expanding field into a clinically useful volume that will enable clinicians, patients, and families to understand these disorders and make sound treatment decisions in light of recent research. The editors, as well as most of the chapter authors, are faculty or former trainees at the prestigious Medical Investigation of Neurodevelopmental Disorders (MIND) Institute at UC-Davis, a collaborative international research center committed to the awareness, understanding, prevention, care, and cure of neurodevelopmental disorders, including autism spectrum disorders, ADHD, learning disorders, and more. Each chapter presents signs and symptoms; epidemiology and etiology; diagnostic approaches; evidence based interventions; and reviews of promising research. By focusing on the range of neurodevelopmental disorders commonly seen and managed by both primary and subspecialist health care professionals. Autism and Other Neurodevelopmental Disorders explains cutting-edge research and advances in clinical care, and assembles them into a single, indispensable volume.

MATERNAL, FETAL, & NEONATAL PHYSIOLOGY - E-BOOK

Springer Science & Business Media

This book brings together the most up-to-date information about the physiology of progestogens. This volume addresses the bidirectional communication between hormones, fertility, tumors, and autoimmunity. It provides the basic science and clinical perspectives of progestogens which have not been previously available in one volume. In addition to estrogens, androgens,

mineralocorticoids and glucocorticoids, progestogens are a major class of steroid hormone. While present in certain phases of estrous and menstrual cycles, progestogens are named for their function in maintaining pregnancy. This book is essentially practical in orientation, addressing the specific issues that confront the practitioner, and provides information to Obstetricians, Gynecologists, Reproductive endocrinologists, as well as Gynecological Oncologists and Rheumatologists. Contributions are from an international team of experts in the field.

PATHOLOGY OF THE FEMALE GENITAL TRACT

Saunders W.B.

The thirteenth edition of this classic text continues and further enriches the rich legacy of the previous editions. In a clear and authoritative style, this edition explains the basic principles of physiology while emphasizing their clinical significance in day-to-day medical practice.

Mechanisms of Physical and Emotional Stress Elsevier Health Sciences

This book is designed as an introductory text in neuroendocrinology; the study of the interaction between the brain and endocrine system and the influence of this on behaviour. The endocrine glands, pituitary gland and hypothalamus and their interactions and hormones are discussed. The action of steroid and thyroid hormone receptors and the regulation of target cell response to hormones is examined. The function of neuropeptides is discussed with respect to the neuroendocrine system and behaviour. The

neuroimmune system and lymphokines are described and the interaction between the neuroendocrine and neuroimmune systems discussed. Finally, methods for studying hormonal influences on behaviour are outlined. Each chapter has review

and essay questions designed for advanced students and honours or graduate students with a background in neuroscience, respectively.
