In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it.

LIVING THE SCIENCE OF MIND is Ernest Holmes' own commentary on his classic SCIENCE OF MIND textbook. While the foundation and principles of Science of Mind are well-established in the textbook, here you'll find the guidelines, applications, topics and lessons conveyed in the personal style that filled Dr. Holmes' classes and Sunday-morning meetings to overflowing. Founder of the Science of Mind philosophy and worldwide movement, and author of metaphysical bestsellers, Dr. Holmes continually sought to simplify his teaching so people could understand, adapt, and realize the benefits of these spiritual principles in an ever-changing world. LIVING THE SCIENCE OF MIND can be used in any number of ways. You can follow the CD's own progression, ideal for classwork or self-instruction, or you can just "drop in" anywhere in this treasury of Science of Mind principles and listen at random for a pause that truly refreshes.

In Psychology: The Science of Person, Mind, and Brain, experienced teacher, researcher, and author Daniel Cervone provides students with a new and exciting way of understanding psychology. Cervone organizes material around three levels of analysis -- person, mind, and brain -- and employs a person-first

format that consistently introduces topics at the person level: theory and research on the lives of people in sociocultural contexts. Students are able to make sense of the latest research through what they understand best: people. With fellow teacher and researcher Tracy Caldwell, Cervone has conceived a text beyond the print experience from the ground up, integrating online immersive research experiences and assessment tools that capitalize on research findings on pedagogy and student learning (e.g., the testing effect). Pedagogical Author, Tracy L. Caldwell Working closely with Daniel Cervone, fellow teacher and researcher Tracy Caldwell of Dominican University developed the book's pedagogical program from the Preview Questions at the beginning of each section to the Self-Tests at the end of each chapter. The pedagogy is designed to engage students at multiple levels of Bloom's taxonomy and at multiple points in each chapter.

The Power of Knowing What You Don't Know McGraw Hill

Where did we come from? What is our connection with other life forms? What are the mechanisms of mind that define what it means to be a human being? Evolutionary psychology is a revolutionary new science, a true synthesis of modern principles of psychology and evolutionary biology. Since the publication of the award-winning first edition of Evolutionary Psychology, there has been an explosion of research within the field. In this book, David M. Buss examines human behavior from an evolutionary perspective, providing students with the conceptual tools needed to study evolutionary psychology and apply them to empirical research on the human mind. This edition contains expanded coverage of cultural evolution, with a new section on culture-gene co-evolution, additional studies discussing interbreeding between modern humans and Neanderthals, expanded discussions of evolutionary hypotheses that have been empirically disconfirmed, and much more! Evolutionary Psychology features a wealth of student-friendly pedagogy including critical-thinking questions and case study boxes designed to show how to apply evolutionary psychology to real-life situations. It is also accompanied by a thoroughly updated companion website featuring PowerPoints for each chapter, test bank questions, and links to web resources and videos. Evolutionary Psychology is an invaluable resource for undergraduates studying psychology, biology and anthropology.

#1 New York Times Bestseller "THIS. This is the right book for right now. Yes, learning requires focus. But, unlearning and relearning requires much more—it requires choosing courage over comfort. In Think Again, Adam Grant weaves together research and storytelling to help us build the intellectual and emotional muscle we need to stay curious enough about the world to actually change it. I've never felt so hopeful about what I don't know." —Brené Brown, Ph.D., #1 New York Times bestselling author of Dare to Lead The bestselling author of Give and Take and Originals examines the critical art of rethinking: learning to question your opinions and open other people's minds, which can position you for excellence at work and wisdom in life Intelligence is usually seen as the ability to think and learn, but in a rapidly changing world, there's another set of cognitive skills that might matter more: the ability to rethink and unlearn. In our daily lives, too many of us favor the comfort of conviction over the discomfort of doubt. We listen to opinions that make us feel good, instead of ideas that make us think hard. We see disagreement as a threat to our egos, rather than an opportunity to learn. We surround ourselves with people who agree with our conclusions, when we should be gravitating toward those who challenge our thought process. The result is that our beliefs get brittle long before our bones. We think too much like preachers defending our sacred beliefs, prosecutors proving the other side wrong, and politicians campaigning for approval--and too little like scientists searching for truth. Intelligence is no cure, and it can even be a curse: being good at thinking can make us worse at rethinking. The brighter we are, the blinder to our own limitations we can become. Organizational psychologist Adam Grant is an expert on opening other people's minds--and our own. As Wharton's top-rated professor and the bestselling author of

Originals and Give and Take, he makes it one of his guiding principles to argue like he's right but listen like he's wrong. With bold ideas and rigorous evidence, he investigates how we can embrace the joy of being wrong, bring nuance to charged conversations, and build schools, workplaces, and communities of lifelong learners. You'll learn how an international debate champion wins arguments, a Black musician persuades white supremacists to abandon hate, a vaccine whisperer convinces concerned parents to immunize their children, and Adam has coaxed Yankees fans to root for the Red Sox. Think Again reveals that we don't have to believe everything we think or internalize everything we feel. It's an invitation to let go of views that are no longer serving us well and prize mental flexibility over foolish consistency. If knowledge is power, knowing what we don't know is wisdom.

"Ludden's text is a breath of fresh air, enabling students of all backgrounds to see themselves reflected in well-researched and humanized portrayals of the pioneers of the field, working within the context from which psychological science has emerged."

—Cynthia A. Edwards, Meredith College
A History of Modern Psychology: The Quest for a Science of the Mind presents a history of psychology up to the turn of the 21st century. Author David C. Ludden, Jr. uses a topical approach to discuss key thinkers and breakthroughs within the context of various schools of thought, allowing students to see how philosophers, researchers, and academics influenced one another to create the rich and diverse landscape of modern psychology. Through detailed timelines and Looking Back and Looking Ahead sections, the book provides connections between movements and gives students a deeper appreciation for the transference of knowledge that has shaped the field.

Drawing on a wealth of new evidence, pioneering research psychologist David DeSteno shows why religious practices and rituals are so beneficial to those who follow them—and to anyone, regardless of their faith (or lack thereof). Scientists are beginning to discover what believers have known for a long time: the rewards that a religious life can provide. For millennia, people have turned to priests, rabbis, imams, shamans, and others to help them deal with issues of grief and loss, birth and death,

morality and meaning. In this absorbing work, DeSteno reveals how numerous religious practices from around the world improve emotional and physical well-being. With empathy and rigor, DeSteno chronicles religious rites and traditions from cradle to grave. He explains how the Japanese rituals surrounding childbirth help strengthen parental bonds with children. He describes how the Apache Sunrise Ceremony makes teenage girls better able to face the rigors of womanhood. He shows how Buddhist meditation reduces hostility and increases compassion. He demonstrates how the Jewish practice of sitting shiva comforts the bereaved. And much more. DeSteno details how belief itself enhances physical and mental health. But you don't need to be religious to benefit from the trove of wisdom that religion has to offer. Many items in religion's "toolbox" can help the body and mind whether or not one believes. *How God Works* offers advice on how to incorporate many of these practices to help all of us live more meaningful, successful, and satisfying lives.
