Coastal Tourism In India

OMB No. 1130776452406 edited by

HARVEY NOVAK

Tourism Governance Gyan Publishing House

Destination management and resort development and planning are strong core areas in the final year of most undergraduate degrees and a popular area of study at postgraduate level. Using original case studies based on his own research, Resort Destinations uses examples from Australia's Gold Coast, Britain's Brighton, USA's Las Vegas, as well as Hong Kong, New Zealand and the Caribbean.

Successful Tourism Routledge

Drawing on examples from a range of economies and environments, this text develops a global perspective on the management issues facing coastal resorts. The main management themes highlighted include the processes of restructuring, and attempts to develop sustainable agendas.

Managing Coastal Tourism Resorts Springer Nature

This well-received and widely accepted book by the students of business schools across the country, in its Seventh Edition, provides cases that have been culled from the real business world and drawn from authentic sources. NEW TO THE SEVENTH EDITION In the present edition, the following cases have been thoroughly updated: • Ace Designers • BEML • BHEL • BPL • Gillette India • Infosys • Oracle • SAP • Standard Chartered Bank • Taj West End • HMT Watches • HMT Machine Tools These cases highlight the business environment of different companies, specifically from the view of competitiveness, product development, market strategies and inter-national business. The facts and data given in the case studies are compiled and presented in a simple and easy-to-read style for better understanding of the market practices. TARGET AUDIENCE • MBA • PGDM • MIB

Coastal Tourism Routledge

India has a long coastline of about 7,500 kilometers, with an exclusive economic zone (EEZ) of 2.02 million square kilometers. The state of Maharashtra is located on the western side of the Indian Peninsula. The state has 720 kilometers coastline. Towards the southern end of Maharashtra coastline lies the Sindhudurg coastal district. Situated between latitudes 15° 37' and 16° 40' north and longitudes 73° 19' and 74° 18' east, Sindhudurg district has a coastline of 121 kilometers. Apart from the beautiful pocket sandy beaches, island & inland ports, the coast is also known for built heritage, local culture and Malvani cuisine. The area has rich coastal and marine biodiversity. Ecosystem services are extremely important for the sustenance of livelihood of local people. However, coastal tourism has picked up in a most unplanned manner in last two decades in three coastal districts Deogad, Malvan, Vengurla of Sindhudurg district. The paper starts with the key statements by some of the reputed organizations and committees observations and suggestions on coastal tourism. The past experiences and directions along the Sindhudurg coast has been assessed. Some gaps & problems perceived by authors in the study area are enlisted. Being geographers, the authors' experience is largely conditioned by the geomorphic backdrop

and spatio-temporal change in both physical & socio-cultural environment of the study area. Problems as seen by the authors may have solutions from other parts of the world. Some site specific solutions are suggested by the authors.

Tourism, Coastal Livelihoods, Vulnerability and Governance in South India Springer Nature

Inhaltsangabe: Introduction: In the past two decades backpacker tourism has grown vastly throughout both developed and developing world. Particularly to south and Southeast Asian countries the phenomenon of backpacking is not new, so to India, where it dates back to the 60 s and 70 s hippy drifters, to which backpacking is often associated. It has been since the publication of the Lonely Planet s Yellow Bible (Southeast Asia on a Shoestring) in 1975 that backpacking has gradually emerged as a mass travel style. Today popular travel-yourself literature cover almost every corner of the globe, serving a steady demand for off the beaten path travel. Thereby to backpackers the developmental background of a destination plays a lesser role than to the mainstream tourist, who is demanding certain infrastructural arrangements. As a result backpackers are found in utmost remote and low developed locations that other tourists never reach. Thus backpacker enclaves have emerged in many places throughout the world, and not without effects on their hosting environments. While social impacts often carry negative connotations, hosting communities do usually appreciate backpackers for their economic contributions. Objectives and Scope of this paper: In recent years backpacker tourism has profoundly been studied in developed contexts, particularly Australia and New Zealand are to be seen the pioneering regions of independent travel research, having undertaken strenuous efforts to study the same within the past two decades. As a consequence both destinations have recognized the economic value of low budget travel to their countries and established backpacker tourism as high yielding segments within their national tourism markets. In both countries backpacking has since undergone shift from de-marketing to a marketing label. Though in recent years international research has made numerous successful attempts to study backpacker tourism in less developed contexts, many tourism officials in third world destinations as yet refuse to accept the economic reach coming along with low-budget travel. Instead a majority of administrative instances promote upscale- and regulated forms of tourism to be the way forward, neglecting any concerns with regard to necessary infrastructure or initial investments. Though only a fraction of developing nations do actively restrict independent travel to their territories (e.g. Maldives, Bhutan), a majority at best tacitly ignores the [...]

Coastal Regulation in India - Why Do We Need a New Notification? EQUATIONS

This volume explores the spatial side of sustainability using cases from India. It provides a variety of chapters from scholars from West Bengal and elsewhere in the country, highlighting spatial perspectives on environmental issues and offering insight on sustainable development in the subcontinent from a geographical perspective. A wide variety of topics are covered here, including but not limited to mitigation of and adaptation to climate issues,

hydrogeomorphologic issues, environmental management, agricultural sustainability, ecosystem services, urban environmental management and tourism issues. The lessons learned here are transferable to other contexts, and the book is a resource for researchers, academics, practitioners, government organizations, NGOs and anyone else interested in the spatial side of sustainability.

COASTAL ENVIRONMENTS OF INDIA

EQUATIONS

Indian Tourism brings together leading experts from all over the world to assess the challenges and opportunities of the tourism sector in India and its correlation to the country's economic performance and prospects.

Unholy Nexus - Male Child Sexual Exploitation in Pilgrim Tourism Sites in India IGI Global

The heinous attack on Mumbai on 26 November 2008 '26/11' brought to the fore the compelling need to strengthen mechanisms for maritime and coastal security in India. This book, ten years after the attack, aims to advance the academic discourse on the subject. The book traces the evolution of the coastal security construct in India and dwells extensively on the multifarious initiatives taken since '26/11'. The book also undertakes a comprehensive examination of multiple elements of the coastal security construct, and makes policy recommendations for further strengthening coastal security in India. A useful, updated, and insightful resource for academics, policymakers, practitioners, as also those interested in the subject.

Envisioning Tourism in India Pearson Education India

In the face of rapid industrialisation in the last few decades, the tourism economy has blossomed into a major industry with positive impacts such as economic growth, infrastructure development, employment, and income generation. However, tourism brings negative environmental effects such as degradation of landscapes and habitats, increased vulnerability of avifauna and wildlife, and pollution leading to the decline of species. Environmental Impacts of Tourism in Developing Nations is a pivotal reference source that explores some of the critical challenges faced in the tourism economy particularly with regard to the impacts on the environment in developing nations. It also explores the impact tourism plays in the biophysical environment such as the issue of climate change. While highlighting topics such as environmental justice, ecosystems, and ecotourism, this book is ideally designed for academicians, policymakers, environmentalists, tourism professionals, and graduate-level students seeking current research on the environmental and economic impacts of tourism.

Coastal Security- Policy Imperatives for India Walter de Gruyter GmbH & Co KG

This contributed volume assesses the state and future of India's East Coast through a wide variety of chapters grouped by methodology and approach. Part I: Assessment through Geomorphological Approaches describes geomorphological diversities of the eastern shorelines of India, Coastal Modelling System- SMC and morphodynamics of Odisha coast, Paleo

shorelines and beach ridge chenier formations of Subarnarekha delta, seasonal sediment budget of Chandrabhaga beachdune system, Beach stage and dune stage modelling Mandarmoni coast, drainage characters of South Andaman Islands, coastal foredune morphology and sediment of Odisha and West Bengal, Geo-archaeological pieces of evidence of ancient coastal environment, coastal sediment characters, beach ridge formation in the chenier coast, and geomorphological changes of ancient ports and harbours in the shoreline of West Bengal. Part II: Assessment through Environmental Approaches addresses various environmental assessment techniques of mangrove sensitivity to the sea level rise process in the Sundarban, land degradation of the hinterland drainage basins, the riparian environment of the coastal drainage basins, agricultural adaptability in response to climate variability in the coastal areas of West Bengal, forest degradations of the lateritic upland tracts, coastal tourism potentialities in Odisha and West Bengal, Climate variabilities and agricultural modifications in the hinterland areas of West Bengal districts, the tidal flat environment of Sagar Island, landforms and Geomorphosites for the promotion of Geotourism in South Andaman Perils of Premature Reclamation of Sundarban, marine litter in the coastal regions of West Bengal and Odisha on flora, fauna and humans, Ground water contamination due to saline water encroachment in coastal Andhra Pradesh and Spatio-temporal changes in the Hugli estuarine environment and coastal hazards and flood risk of southwestern Sundarban. Part III: Assessment through Remote Sensing & GIS Approaches uses the aforementioned techniques in service of exploration of monitoring health of Mangrove forest, Geomorphological analysis of the coral fringed coasts of Andaman, hydrological and morphological variations of Ichhamati Tidal estuary, multivariate analysis of coastal vulnerabilities, geography of tourism resources in Andaman group of islands, tourism climate index with application geospatial techniques, diversity of landscape ecology in the coastal blocks of Purba Medinipur, overwash vulnerability in Odisha coast, livelihood security index of the coastal communities, managing coastal squeeze response and wetland loss in the estuarine coastal tract of West Bengal, environmental effects of historical land reclamation process in the Sundarban, and emerging environmental problems of coastal urbanization in Digha, Kanthi, and Haldia.

Tourism Marketing Multilingual Matters

This book introduces the use of various remote sensing data such as microwave, hyperspectral and very high-resolution (VHR) satellite imagery; mapping techniques including pixel and object-based machine learning; and geostatistical modelling techniques including cellular automata, entropy and land fragmentation. Remote sensing plays a vital role in solving urban and environmental challenges at the landscape level. Globally, more than half of the urban population is facing severe environmental and social challenges, especially those relating to climate change, agricultural land encroachment, green infrastructure and environmental degradation, mobility due to rapid rural-urban transformation and anthropogenic interventions. Mapping and quantification of such threats at the landscape level are challenging for experts using traditional techniques; however, remote sensing technology provides diverse spatial data at a varying scale, volume and accessibility for mapping and modelling, and it also analyses challenges at urban and landscape levels. Together, they address challenges at urban and landscape levels to support the Sustainable Development Goals (SDGs). *Coastal Tourism in Tamil Nadu: A Status Report* diplom.de 'Tourism in South and South East Asia' is a comprehensive and solid introduction to tourism in South and South East Asia with a specific appeal both to institutions in the region, and other institutions who wish to expose students to one of the most dynamic tourism regions in the world. Despite downturns in outbound tourism (due to the current economic crisis), inbound tourism from outside the region has continued to increase with governments placing more emphasis on the economic significance of tourism than ever. 'Tourism in South and South East Asia' is the first tourism book to deal comprehensively with the implications of the Asian economic crisis for tourism. With South and South East Asia set to be the fastest growing area of tourism activity in the world well into the next century, 'Tourism in South and South East Asia' is an essential text for students

both within and outside of this region. Dealing with concepts, themes and issues which are pertinent to tourism development, planning, marketing and management; these two internationally known authors have produced an authoritative text that covers all aspects of this topic through the use of illustrative and relevant case studies.

INDIAN TOURISM

Springer Nature

The economic paradigms currently dominating the world are not sustainable. The threats from climate change, exploitation-based approaches to commerce, and the excess acquisition of resources loom large as well as the possibility of military flare-ups. Maintaining a balance between development and ecosystems, aspirations for growth, and the need for sustainability is a prescient challenge. The Indian Ocean Region (IOR) encompasses some of the poorest countries in the world and those that will bear the brunt of the negative impacts from climate change. This book explores the immense potential of the IOR and how best to maintain sustainable and responsible economic and strategic activities. The combination of science, innovation, and entrepreneurship will create a new blue economy business model, which has the potential to transform society. Based on critical analysis of the model and its practical applications, including risks as well as opportunities, the topics discussed range from food security, energy, and resilience to climate change, trade and investments, and improved maritime connectivity to tourism, poverty alleviation, and socioeconomic growth, encompassing a wide range of interests and expertise. **FEATURES** Examines the geo-politics, geo-resources, and geo-hazards of the IOR and identifies opportunities and methods to achieve success Covers a detailed assessment of available resources (fisheries, minerals, energy), threats such as pollution (plastic, acoustic, carbon, bio-invasion), geo-politics (maritime security, military invasion), and strategic vision (determining carrying capacity, ethical governance, and responsible ecosystem) of the Indian Ocean Analyzes the economics of the blue economy, the global scenario including the Pacific and Caribbean islands, and the aspect of the Chinese geo-political invasion in the Indian Ocean Inspires entrepreneurs to adopt new ways of creating economic benefits, reducing energy use, and increasing revenue while simultaneously helping the communities involved Discusses the threat and security perspectives of the IOR and the collective responsibility for a sustainable use of resources Crossing a wide range of interests and expertise, this book explores topics and ideas that will be essential to researchers and professionals in marine sciences, economics, business, geography, and political sciences. Graduate students in the same fields as well as any and all organizations that maintain a presence in the IOR will likewise find this book to be a valuable resource.

Economic Outlook for Southeast Asia, China and India

2023 Reviving Tourism Post-Pandemic EQUATIONS Building upon the book *Disappearing Destinations* (Jones and Phillips 2010) and its conclusion that promoted the need to recognize problems, meet expectations and manage solutions *Global Climate Change and Coastal Tourism* explores current threats to, and consequences of, climate change on existing tourism coastal destinations. Part 1 of the book provides a theoretical platform and addresses topics such as sustainability, tourism impacts, governance trade and innovation and how the media addresses climate change and tourism. It also assesses management and policy options for the future sustainability of threatened tourism coastal destinations. Part 2 presents case studies from all regions of the world (Europe, The Americas, Asia, Africa and Australasia) which synthesise findings to make recommendations that can be used to promote strategies that ameliorate projected impacts of climate change on coastal tourism infrastructure and in turn promote the future sustainability of coastal tourism destinations. This is a timely and informative text with appeal to researchers, undergraduate and post graduate students of tourism management, tourism planning, sustainable tourism development and leisure management, coastal tourism/management, environmental

management/planning, geography, coastal zone management or climate change studies.

Crisis on the Coast and Hinterland PHI Learning Pvt. Ltd. Papers presented at a national seminar during Feb. 1997 at Burdwan, India.

Environment Management with Indian Experience CRC Press

The pattern and impacts consequent upon tourism development in coastal settings, one of the most enduring human aspects of modern times, is rather intriguing. In many ways, it exemplifies the most manifestive aspect of tourism development since 1960s'. In India, hosting the sun-sea-sand drifters of Western origin has history of over six decades and in course many patches of its long coast has been transformed into virtual paradise for holiday-makers! Equally interesting has been tourism's evolution as powerful agent of change, largely organic and bereft of meaningful State and/or corporate patronage. Indeed, conspicuous indifference of the planning machinery has virtually left tourism a lame-duck, subjecting it to mend itself and sustain. In spite of this, tourism's influence on the socioeconomic fabric of coastal areas has been tremendous and many such cases can be located in Kerala and Goa. Tourism also transforms many components of destinations, often irreversibly, inviting criticism. Idea for present work emerged out of this and specifically it endeavours mapping a trajectory of tourism-induced transformation processes in coastal places and space along India's West Coast.

Local Economic Development Impacts of International Backpacker Tourism to Third World Destinations Springer Nature

The coastal zone management is the need of the hour for every country. The wide range of resources and economic importance of the coastal zone have become very vital in today's time. This book has been written by keeping all these things in mind. This book starts with an introduction with coast and coastal life, followed by the chapters which highlight the extension of coasts, the concept of coastal zone management, promotion of tourism by the development of coastal areas, coastal system and its management structures, marine tourism and its impact on coastal life, the problem of marine pollution etc. This book concludes with a chapter on coastal zone and related Indian projects. We have tried to keep many relevant topics in this book and language has been kept very simple and pragmatic throughout the book and we hope that the present book will find its due place amongst the readers.

Coastal Ecosystems Routledge

To date, a vast amount of the world's oceans remains uncharted. With water covering more than 70 percent of the Earth's surface, maritime and oceanographic exploration and research is vital. *Oceanography and Coastal Informatics: Breakthroughs in Research and Practice* is a critical source of academic knowledge centered on technologies, methodologies, and practices related to the biological and physical aspects of the ocean and coastal environments. This publication is divided into four sections: climate change and environmental concerns; data analysis and management; fisheries management and ecology; and GIS, geospatial analysis, and localization. This publication is an ideal reference source for oceanographers, marine and maritime professionals, researchers, and scholars interested in current research on various aspects of oceanography and coastal informatics.

Marianischer Trost- und Seelen-Schatz National Maritime Foundation

This volume incorporates theoretical and practical knowledge through case studies and reviews to serve as a baseline of information for coastal ecosystem research, and discusses the impacts of pollution, industrialisation, agriculture and climate change on coastal ecosystem biogeochemistry and biodiversity. The case studies address the role of coastal ecosystems as a carbon sink which is getting impacted by anthropogenic disturbances. Through this analysis, the book covers various strategies for the conservation and management of coastal ecosystems, considering their unique ecological and biogeochemical attributes and region-specific threats and impacts. The book will be of interest to a wide range of readers including students, researchers and professionals in coastal ecosystem science, coastal pollution, climate change adaptation, biodiversity conservation and environmental management.
