ALIYAH ANDREWS

[Accounting Principles 9th Edition Working Paper for SouthWestern Illinois College-Belleville](#) Franklin Classics Trade Press
 Drawn from the pages of Scientific American and collected here for the first time, this work contains updated and condensed information, made accessible to a general popular science audience, on the subject of understanding the genome.
[The Common Law in India](#) Hachette UK
 When the late Professor Joachim Illies suggested in 1980 that I edit a volume of the Monographiae Biologicae on Sri Lanka, I was glad to accept the challenge. Although I had spent only six years of my research and teaching career in Sri Lanka, I had made personal contact or corresponded with many scientists who had worked in, still work in, or who have studied material from Sri Lanka. The present domicile of the authors of the chapters in this volume shows the wide geographic spread of interest in Sri Lanka, and indicates also the dispersion of Sri Lankan scientists like myself. Sri Lanka has had a relatively long history of indigenous scientific research in the natural sciences. From the early work of Kelaart (1852, Prodromous Fauna Zeylanicae, Ceylon Govt. Press, 250 pp.) to the present time, there has been a more or less sustained research effort in the natural sciences. The Colombo Museum, which celebrated its centenary only a few years ago, and the world famous Peradeniya Botanical Gardens, served as repositories and bases for continued research on the fauna and flora. There are a number of land marks in these studies.
[The Dragonflies of Sri Lanka](#) Emerald Group Publishing
 This easy-to-use identification guide to the 150 reptile species most commonly seen in Sri Lanka is perfect for resident and visitor alike. High-quality photographs from the authors are accompanied by detailed species descriptions, which include size, distribution, habits and habitat. The user-friendly introduction covers fascinating information on folklore associated with reptiles, snake topography, how to deal with snake bites and a glossary. Also included is an all-important checklist of all of the reptiles of Sri Lanka encompassing, for each species, its common and scientific name, and its IUCN status.

CANOPY ARTHROPODS

Int. Rice Res. Inst.
 Multilingual Literature as World Literature examines and adjusts current theories and practices of world literature, particularly the conceptions of world, global and local, reflecting on the ways that multilingualism opens up the borders of language, nation and genre, and makes visible different modes of circulation across languages, nations, media and cultures. The contributors to Multilingual Literature as World Literature examine four major areas of critical research. First, by looking at how engaging with multilingualism as a mode of reading makes visible the multiple pathways of circulation, including as aesthetics or poetics emerging in the literary world when languages come into contact with each other. Second, by exploring how politics and ethics contribute to shaping multilingual texts at a particular time and place, with a focus on the local as a site for the interrogation of global concerns and a call for diversity. Third, by engaging with translation and untranslatability in order to consider the ways in which ideas and concepts elude capture in one language but must be read comparatively across multiple languages. And finally, by proposing a new vision for linguistic creativity beyond the binary structure of monolingualism versus multilingualism.

A New General Catalogue of the Ants of the World Taylor & Francis
 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Genetic Evaluation for Insect Resistance in Rice Bloomsbury Publishing USA
 As forests are cut down, altered and fragmented, the communities of organisms associated with them are also affected. Predictions of global species extinction rates based on forest loss range 1% to 10% each decade. Because arthropods comprise the largest component of animal species richness, it is inevitable that many arthropod species will become extinct. Millions of these species are thought to live in the forest canopy. During the last twenty years recognition of the importance of canopy arthropods to global biodiversity and the crucial roles arthropods play in forests has led to a revolution in the study and understanding of the arthropod community structure in the forest canopy. Recent advances have been greatly aided by the development of improved sampling techniques and new methods of access to the forest canopy. Canopy Arthropods brings together for the first time a wide range of the most recent studies of arthropods living in forest canopies and comes from a truly international team of contributors.

 Language Diversity in the Sinophone World offers interdisciplinary insights into social, cultural, and linguistic aspects of multilingualism in the Sinophone world, highlighting language diversity and opening up the burgeoning field of Sinophone studies to new perspectives from sociolinguistics. The book begins by charting historical trajectories in Sinophone multilingualism, beginning with late imperial China through to the emergence of English in the mid-19th century. The volume uses this foundation as a jumping off point from which to provide an in-depth comparison of modern language planning and policies throughout the Sinophone world, with the final section examining multilingual practices not readily captured by planning frameworks and the ideologies, identities, repertoires, and competences intertwined within these different multilingual configurations. Taken together, the collection makes a unique sociolinguistic-focused intervention into emerging research in Sinophone studies and will be of interest to students and scholars within the discipline.

The Halls of the Ancients ... IUCN
 "Chapter 1 focuses on some of the steps needed to increase the rate of growth in rice production especially for meeting the demands of population growth. Chapter 2 discusses the various conventional approaches used for rice improvement. Chapter 3 examines the role of SSR markers in breeding and improvement of rice. Following the finding that Microbispora are the dominant genus of Actinobacteria in rice (*Oryza sativa* L.) plants grown in a Vertisol soil from Yanco, NSW, Australia, the authors of Chapter 4 decided to test the hypothesis whether this observation was t rice cultivar- or soil-dependent. Four rice cultivars grown in four agricultural soils were subjected to comparative assessment of their root and shoot endophytic actinobacterial population diversity, employing a classical culture-dependent approach as well as 16S rRNA gene PCR T-RFLP as the culture-independent method. Chapter 5 focuses on many issues pertaining to the development of temperate and cold-tolerant rice varieties suitable for cultivation under irrigated conditions in Kashmir valley and the hills around it. We discuss the issues, the progress, and the way forward for rice research in this very significant Himalayan region where rice is a staple food. The last chapter deals with the present distribution of the pest, adult description, host plants, life history, ecology, its association with various plant pathogens, damage and effect on yield, natural enemies and management practices"--
[Readings in Gender in Africa](#) Edward Elgar Publishing
 Insects, Science, & Society documents the proceedings of a symposium of the same name celebrating the centennial of entomology at Cornell University. The symposium and the resulting book brought together some of the world's leading entomologists, who discussed recent advances in their diverse specialties. In commemorating the hundred years of entomology, the symposium also honors the founder of the department at Cornell, John Henry Comstock, whose investigations encompassed not only many aspects of entomology—insect taxonomy, morphology, and ecology—but also focused on practical problems of pest control. Starting with a discussion that provides a broad perspective of the interrelationship of insects, science, and society, the remainder of the book presents the contributions made by researchers at the symposium. These contributions are organized into five parts. Part I discusses aspects of the social implications of insects. Part II deals with communication among insects. Part III examines other interactions among insects and between insects and plants. Part IV covers insect population dynamics. Part V deals with insect pest management.

 Includes music.

THE FAUNA OF SRI LANKA

Springer

"The seventeenth is the greatest of all centuries for the organ and for its literature. Never before or since has this instrument served as such an important medium of musical composition. Such composers as Frescobaldi, Cabanilles, De Grigny, the Couperins, Sweelinck, Scheidemann, Scheidt, Bruhns, Buxtehude, Froberger, and Pachelbel regarded it as their principal outlet for creative expression. In this study, the author first traces the origins of seventeenth-century styles in the keyboard music of the late Renaissance; he then devotes individual chapters to each of the important geographical styles of seventeenth-century organ music. The book's point of orientation is the manner in which each of these styles develops its own unique vocabulary and set of compositional techniques. The text is illustrated by some two hundred musical examples carefully selected to demonstrate each stylistic development. The volume concludes with a selected and annotated bibliography of readily available performances of the entire repertory." --Dust jacket.

THE COMMUNITY OF ADVANTAGE

Elsevier

After 20 major league seasons—all with the New York Yankees—Derek Jeter is hanging up his spikes at the conclusion of the 2014 campaign. The Yankees' captain since 2003, the shortstop is considered the greatest Yankee of his generation. Jeter's Yankees teams won five World Series, including three in a row in 1998, 1999, and 2000. The all-time postseason leader in hits, doubles, and triples, Jeter earned the nickname "Captain Clutch" for his game-changing performances during the Yankees' championship era. Through stories and powerful images from the pages of the New York Times, Derek Jeter: Excellence and Elegance celebrates the career of this New York icon from Jeter's debut in 1995 through his final game in 2014. This full-color pictorial keepsake also features an introduction by Tyler Kepner, the Times' award-winning baseball reporter.

Understanding the Genome Oxford University Press

The Community of Advantage asks how economists should do normative analysis. Normative analysis in economics has usually aimed at satisfying individuals' preferences. Its conclusions have supported a long-standing liberal tradition of economics that values economic freedom and views markets favourably. However, behavioural research shows that individuals' preferences, as revealed in choices, are often unstable, and vary according to contextual factors that seem irrelevant for welfare. Robert Sugden proposes a reformulation of normative economics that is compatible with what is now known about the psychology of choice. The growing consensus in favour of paternalism and 'nudging' is based on a very different way of reconciling normative economics with behavioural findings. This is to assume that people have well-defined 'latent' preferences which, because of psychologically-induced errors, are not always revealed in actual choices. The economist's job is then to reconstruct latent preferences and to design policies to satisfy them. Challenging this consensus, The Community of Advantage argues that latent preference and error are psychologically ungrounded concepts, and that economics needs to be more radical in giving up rationality assumptions. Sugden advocates a kind of normative economics that does not use the concept of preference. Its recommendations are addressed, not to an imagined 'social planner', but to citizens, viewed as potential parties to mutually beneficial agreements. Its normative criterion is the provision of opportunities for individuals to participate in voluntary transactions. Using this approach, Sugden reconstructs many of the normative conclusions of the liberal tradition. He argues that a well-functioning market economy is an institution that individuals have reason to value, whether or not their preferences satisfy conventional axioms of rationality, and that individuals' motivations in such an economy can be cooperative rather than self-interested.

Organ Literature of the Seventeenth Century Diamond Pocket Books (P) Ltd.

Eight papers, both theoretical and applied, on the concept of equality of opportunity which says that a society should guarantee its members equal access to advantage regardless of their circumstances, while holding them responsible for turning that access into actual advantage by the application of effort.

Indiana University Press

Textbooks inform readers that the precursor of Standard English was supposedly an East or Central Midlands variety which became adopted in London; that monolingual fifteenth century English

manuscripts fall into internally-cohesive Types; and that the fourth Type, dating after 1435 and labelled 'Chancery Standard', provided the mechanism by which this supposedly Midlands variety spread out from London. This set of explanations is challenged by taking a multilingual perspective, examining Anglo-Norman French, Medieval Latin and mixed-language contexts as well as monolingual English ones. By analysing local and legal documents, mercantile accounts, personal letters and journals, medical and religious prose, multiply-copied works, and the output of individual scribes, standardisation is shown to have been preceded by supralocalisation rather than imposed top-down as a single entity by governmental authority. Linguistic features examined include syntax, morphology, vocabulary, spelling, letter-graphs, abbreviations and suspensions, social context and discourse norms, pragmatics, registers, text-types, communities of practice social networks, and the multilingual backdrop, which was influenced by shifting socioeconomic trends.

Vegetables make up a major portion of the diet of humans and are critical for good health. With the world population predicted to reach 9 billion people by 2050, they will play an increasingly important role in food availability. The purpose of this book is to facilitate accuracy in communication among individuals working in agriculture and a better understand of the extent and diversity of vegetable production and utilization worldwide. Increasing global economic interdependence and trade in agricultural products makes precise communication among individuals utilizing different languages essential. There is currently a wide range of vegetables shipped around the world as seasonal, economic and other forces are shifting markets from exclusively local toward global. The text provides up-to-date scientific names, synonyms, and common names for the commercially cultivated vegetable crops grown worldwide (404 crops), in addition to information on the plant parts utilized and their method of preparation. Common names from 370 languages are presented along with information on each of the languages. The text represents an essential reference source with the information presented in a concise and readily accessible format. It allows indentifying a crop from the common name in a diverse cross-section of languages and is therefore of use to university and government researchers, libraries worldwide, agricultural organizations, agricultural scientists, embassies, international travelers, vegetable growers, shippers, packers, produce buyers, grocery store managers, gourmet restaurants, chefs, and gardeners.

Corruption in South Asia Belknap Press

"A name is forever, or at least as long as taxonomy continues," Barry Bolton writes, and here are all the names, antique and modern, of all the ants that are or ever were—from the arctic to the tropical, the fossilized to the living, the mislabeled to the newly christened members of the family Formicidae. For every name that has ever been applied to ants, the book supplies a history and an account of current usage, together with a fully documented indication of the present-day classification. Its comprehensive bibliography provides references to original description, synonymy, homonymy, changes in rank, status, and availability, and alterations in generic status. Organized by family group, genus group, and species group, this meticulously detailed but easily used volume is the ultimate resource for myrmecology. Along with Bolton's Identification Guide to the Ant Genera of the World, it will be the essential reference for anyone, expert or amateur, with an interest in ants.

A NATURALIST'S GUIDE TO THE REPTILES OF SRI LANKA (2ND EDITION)

Genetic Evaluation for Insect Resistance in Rice

Exploring the modern approach to the economics of happiness, which came about with the Easterlin Paradox, this book analyses and assesses the idea that as a country gets richer the happiness of its citizens remains the same. The book moves through three distinct pillars of study in the field: first analysing the historical and philosophical foundations of the debate; then the methodological and measurements issues and their political implications; and finally empirical applications and discussion about what determines a happy life.
