Working Dog Handler Medical Care Manual (2017), 100 pages INTRODUCTION Military Working Dogs (MWDs) are at the same

risk for injury as their human counterparts and when they are severely injured, best practice for resuscitation mirrors those recommended for humans.¹ A recent study of trauma in MWDs shows that explosions, gunshot wounds and lacerations account for the vast majorities of injuries sustained within the Central Command area of responsibility. In severe cases, these mechanisms of injuries could require resuscitation with blood products. Hemostatic resuscitation has been shown in a many species to be superior to resuscitation with crystalloids or synthetic colloids and should therefore be considered the first-choice resuscitation product in severely wounded MWDs.

This book provides a unique frame work for examining acute lung syndromes that arise from hematologic disorders or is defined by a hematologic abnormality as a key feature. Acute lung processes arising from hematologic disorders can present as life-threatening conditions, and as such, the pulmonary physician or critical care physician are often directly involved in care or called upon to provide expertise. Chapters are

organized into three sections, each with an emphasis on pathogenesis and current understanding of mechanisms. The text begins with the central theme of the lungs as the direct interface between the external environment and blood, description of individual components of the hematopoietic system, their function and relevance to the lungs. The second section outlines both benign and malignant primary hematologic disorders that can lead to acute pulmonary manifestations. The final section focuses on acute lung syndromes stemming from complications of transfusion and treatment. Chapters are presented in an easy-to-access format, providing information on diagnosis, management, and outcomes. This is a valuable resource for pulmonary

fellows in training, pulmonologists, critical care physicians, and physicians involved in caring for patients in the ICU.
