Written by four leading experts, this edition thoroughly introduces today's modern principles of petroleum production systems development and operation, considering the combined behaviour of reservoirs, surface equipment, pipeline systems, and storage facilities. The authors address key issues including artificial lift, well diagnosis, matrix stimulation, hydraulic fracturing and sand control. They show how to optimise systems for diverse production schedules using queuing theory, as well as linear and dynamic programming. Throughout, they provide both best practices and rationales, fully illuminating the exploitation of unconventional oil and gas reservoirs. Updates include: Extensive new coverage of hydraulic fracturing, including high permeability fracturing New sand and water management techniques * An all-new chapter on Production Analysis New coverage of digital reservoirs and self-learning techniques New skin correlations and HW flow techniques

This 2017 Article IV Consultation highlights that over recent years, Tonga has enjoyed robust growth and macroeconomic stability. Growth continued to be strong at 2.7 percent in FY2017 following 3.4 percent in FY2016, supported by construction, agriculture, tourism, strong remittances, and strong private credit growth. Inflation spiked in FY2017 because of a new import tax and an increase in domestic food prices. The country's external position weakened slightly owing to construction-related imports, with reserves supported by strong remittances and donor aid. The outlook for the Tongan economy is favorable, despite external headwinds. Real GDP growth is projected at 3.4 percent in FY2018, driven by construction, agriculture, and tourism.

Eli Goldratt is known by millions of readers worldwide as a scientist, educator and business guru. His Theory of Constraints (TOC) is taught at business schools and MBA programs around the globe. Government agencies and businesses, large and small, have adopted his methodologies. TOC has been successfully applied in almost every area of human endeavor, from industry to healthcare to education. And while Eli Goldratt is indeed a scientist, an educator and a business leader, he is first and foremost a philosopher; some say a genius. He is a thinker who provokes others to do the same. In *The Choice*, Goldratt once again presents his thought-provoking approach, this time through a conversation with his daughter, Efrat, as they discuss his fundamental system of beliefs. Through examples and discussions, Eli Goldratt helps us understand, holistically, how the interrelation of emotions, intuition and logic influences our ability to think clearly and problem solve when making personal and professional decisions. Can every conflict be removed? Is every situation exceedingly simple? (no matter how complex it initially looks) Can every situation be substantially improved? Is there always a win-win solution? Dr. Goldratt exhorts his readers to examine and reassess their lives and business practices by cultivating a different perspective and a clear new vision. This revised edition includes Efrat's Notes - these notes and logical maps are helpful tools that assist in visualizing and implementing the thoughts and ideas expressed throughout this book.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting

engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.
