DIY Financial Advisor: A Simple Solution to Build and Protect Your

Wealth DIY Financial Advisor is a synopsis of our research findings

developed while serving as a consultant and asset manager for

family offices. By way of background, a family office is a

company, or group of people, who manage the wealth a family

has gained over generations. The term 'family office' has an

element of cachet, and even mystique, because it is usually

associated with the mega-wealthy. However, practically speaking,

virtually any family that manages its investments independent of

the size of the investment pool could be considered a family

office. The difference is mainly semantic. DIY Financial Advisor

outlines a step-by-step process through which investors can take

control of their hard-earned wealth and manage their own family

office. Our research indicates that what matters in investing are

minimizing psychology traps and managing fees and taxes. These

simple concepts apply to all families, not just the ultra-wealthy.

But can or should we be managing our own wealth? Our natural

inclination is to succumb to the challenge of portfolio

management and let an 'expert' deal with the problem. For a

variety of reasons we discuss in this book, we should resist the

gut reaction to hire experts. We suggest that investors maintain

direct control, or at least a thorough understanding, of how their

hard-earned wealth is managed. Our book is meant to be an

educational journey that slowly builds confidence in one's own

ability to manage a portfolio. We end our book with a potential

solution that could be applicable to a wide-variety of investors,

from the ultra-high net worth to middle class individuals, all of

whom are focused on similar goals of preserving and growing

their capital over time. DIY Financial Advisor is a unique resource.

This book is the only comprehensive guide to implementing

simple quantitative models that can beat the experts. And it

comes at the perfect time, as the investment industry is

undergoing a significant shift due in part to the use of automated

investment strategies that do not require a financial advisor's

involvement. DIY Financial Advisor is an essential text that guides

you in making your money work for you not for someone else!

The authors include applied mathematicians, economists and industry practitioners, providing for a multi-disciplinary spectrum of perspectives on the subject. Taken together, the chapters give a comprehensive summary of the current state of the art in quantitative analysis of commodities and energy finance. The topics covered include structural models of electricity markets, financialization of commodities, valuation of commodity real options, game-theory analysis of exhaustible resource management and analysis of commodity ETFs. The volume also includes two survey articles that provide a source for new researchers interested in getting into these topics.

The Handbook of News Analytics in Finance is a landmark publication bringing together the latest models and applications of News Analytics for asset pricing, portfolio construction, trading and risk control. The content of the Handbook is organised to provide a rapid yet comprehensive understanding of this topic. Chapter 1 sets out an overview of News Analytics (NA) with an explanation of the technology and applications. The rest of the chapters are presented in four parts. Part 1 contains an explanation of methods and models which are used to measure and quantify news sentiment. In Part 2 the relationship between news events and discovery of abnormal returns (the elusive alpha) is discussed in detail by the

leading researchers and industry experts. The material in this part also covers potential application of NA to trading and fund management. Part 3 covers the use of quantified news for the purpose of monitoring, early diagnostics and risk control. Part 4 is entirely industry focused; it contains insights of experts from leading technology (content) vendors. It also contains a discussion of technologies and finally a compact directory of content vendor and financial analytics companies in the marketplace of NA. The book draws equally upon the expertise of academics and practitioners who have developed these models and is supported by two major content vendors - RavenPack and Thomson Reuters - leading providers of news analytics software and machine readable news. The book will appeal to decision makers in the banking, finance and insurance services industry. In particular: asset managers; quantitative fund managers; hedge fund managers; algorithmic traders; proprietary (program) trading desks; sell-side firms; brokerage houses; risk managers and research departments will benefit from the unique insights into this new and pertinent area of financial modelling.

He highlights the petroleum industry players, risks, economics, and commercial/legal arrangements.
