978-0-521-79689-7 - Bacterial ...For example, bacterial pathogenesis is the mechanism by which bacteria cause infectious illness. Most diseases are caused by multiple processes. For example, certain cancers arise from dysfunction of the immune system (skin tumors and lymphoma after a renal transplant , which requires immunosuppression).

- Infectious disease – disease caused by an infectious agent such as a bacterium, virus, protozoan, or fungus that can be passed on to others.
- Infection – occurs when an infectious agent enters the body and begins to reproduce; may or may not lead to disease.
- Pathogen – an infectious agent that causes disease.
