Although generally considered adult disorders, anxiety and depression are widespread among children and adolescents, affecting academic performance, social development, and long-term outcomes. They are also difficult to treat and, especially when they occur in tandem, tend to fly under the diagnostic radar. *Anxiety and Depression in Children and Adolescents* offers a developmental psychology perspective for understanding and treating these complex disorders as they manifest in young people. Adding the school environment to well-known developmental contexts such as biology, genetics, social structures, and family, this significant volume provides a rich foundation for study and practice by analyzing the progression of pathology and the critical role of emotion regulation in anxiety disorders, depressive disorders, and in combination. Accurate diagnostic techniques, appropriate intervention methods, and empirically sound prevention strategies are given accessible, clinically relevant coverage. Illustrative case examples and an appendix of forms and checklists help make the book especially useful. Featured in the text: Developmental psychopathology of anxiety, anxiety disorders, depression, and mood disorders. Differential diagnosis of the anxiety and depressive disorders. Assessment measures for specific conditions. Age-appropriate interventions for anxiety and depression, including CBT and pharmacotherapy. Multitier school-based intervention and community programs. Building resilience through prevention. *Anxiety and Depression in Children and Adolescents* is an essential reference for practitioners, researchers, and graduate students in school and clinical child psychology, mental health and school counseling, family therapy, psychiatry, social work, and education.

A teacher's ability to manage the classroom strongly influences the quality of teaching and learning that can be accomplished. Among the most pressing concerns for inexperienced teachers is classroom management, a concern of equal importance to the general public in light of behavior problems and breakdowns in discipline that grab newspaper headlines. But classroom management is not just about problems and what to do when things go wrong and chaos erupts. It's about how to run a classroom so as to elicit the best from even the most courteous group of students. An array of skills is needed to produce such a learning environment. The *SAGE Encyclopedia of Classroom Management* raises issues and introduces evidence-based, real-world strategies for creating and maintaining well-managed classrooms where learning thrives. Students studying to become teachers will need to develop their own classroom management strategies consistent with their own philosophies of teaching and learning. It is hoped that this work will help open their eyes to the range of issues and the array of skills they might integrate into their unique teaching styles. This unique volume explores issues related to working with children who have nonverbal learning disability (NVLD). It examines how a child's psychology – thoughts, feelings, beliefs – affects his or her functioning and learning. In addition, the book addresses how a child's experiences are processed through individual personality, psychology, culture, environment and economic circumstances, and family dynamics. Using these psychological organizing principles, the book describes how to work most effectively with young patients with NVLD. It offers a new model and definition for understanding NVLD, emphasizing its core deficit of visual-spatial processing. In addition, this book addresses efforts to rename NVLD to developmental visual-spatial disorder (DVSD). It describes the 11 possible subtypes as including a primary deficit in visual-spatial processes and impairment in several additional functional domains, including executive functioning, social/emotional deficits, academic achievement, and motor coordination. The book highlights the need for psychologically minded treatment and provides specific intervention guidelines. It details how to conduct the intake process and create a treatment plan and team and offers practical suggestions for working with a patient's family members. In addition, the book addresses the importance of working with a consistent psychological theory, such as control mastery theory (CMT). It describes the Brooklyn Learning Center Model for treating NVLD and offers guidelines for interventions to support patients academically. The book provides a comprehensive approach to the neuropsychological assessment of NVLD as well as examples of visual-spatial, sensory perception, executive functioning, academics, social/emotional deficits and motor coordination interventions, and all forms used to gather information from patients. Key areas of coverage include: Definition of nonverbal learning disability (NVLD). ## ASSESSMENT OF AUTISM SPECTRUM DISORDER

Prentice Hall

Children's display of unacceptable behavior in the school setting, school violence, academic underachievement, and school failure represent a cluster of problems that touches all aspects of society. Children with learning and behavior problems are much more likely to be un- ployed, exhibit significant emotional and behavior disorders in adulthood, as well as become incarcerated. For example, by adolescence, children with Attention Deficit Hyperactivity D- order are more likely to be retained a grade, drop out of school, have contact with the law, or fair worse along a number of dimensions than their unaffected siblings (Barkely, 1998). Identification, assessment, and treatment of children with externalizing behavior problems

and learning disabilities is critical to optimizing development and prevention of relatively - tractable behavioral and emotional problems in adulthood. For example, poor interpersonal problem solving and social skills excesses and deficits are strongly associated with poor outcomes in adolescence and adulthood. The school is where children learn essential academic, social, and impulse control skills that allow them to function effectively in later years. School is where problems in these areas can be most easily identified and addressed. The purpose of this book is to provide an overview of assessment practices for evaluating children's externalizing behavior problems exhibited in the school environment. Reviews of approximately 100 assessment devices for measuring children's externalizing problems are included. Instruments include structured interviews, rating scales, and observational methods.
