### WHAT 50 YEARS HAVE ACHIEVED

OUP Oxford

During the last decade the food and nutrition situation in developing countries has changed dramatically. For better or worse, urbanization and globalization have altered the diet and nutrition in both rural and urban areas. In many developing countries a persistent level of under nutrition exists both in rural areas and in urban slums due to less access to food needed for an active and healthy life. On the other hand, over-nutrition, or eating too much, has emerged among the middle-income groups. It is essential to have a better understanding of how people deal with their food in developing countries, in order to plan and implement food and nutrition programmes. This manual deals with the process of changing food habits and consumption patterns in developing countries. Nutritional implications, together with practical information is discussed in relationship to conducting field surveys. Part one of the manual provides insight into the dynamics of food habits and consumption and its socio-economic and cultural dimensions. Part two gives practical information on small scale surveys to be carried out within the framework of a nutrition issue; including data collecting on food habits and the measurement of food intake. This manual addresses professionals with practical or academic training and those who are involved in various types of food and nutrition programmes or related activities. It can also be used as a handbook in food and nutrition training courses at higher and at academic level.

The advent of the era of "e-Service," the provision of services over electronic networks like the internet, is one of the dominant business themes of the new millennium. It reflects the fundamental shift in the economy from goods to services and the explosive expansion of information technology. This book provides a collection of different perspectives on e-Service and a unified framework to understand it, even as the business community grapples with the concept. It features contributions from key researchers and practitioners from both the private and public sectors, as well leading scholars from the fields of marketing, information systems, and computer science. They focus on three key areas: the customer-technology interface; e-Service business opportunities and strategies; and public sector e-Service opportunities. The insights they offer will be equally useful to students, scholars, and practitioners.

This overview of recent progress in the study of protein and amino acid nutrition focuses mainly on results obtained in Japan. Most of these data have as yet not been published in English and cover the wide research carried out in fundamentals and new production technologies, important for use in foods, feeds and clinical medicine.

While the Internet is a relatively new technology, that has impacted the world, and provided many benefits, it has also had negative ramifications. Individuals unable to control their use are jeopardizing school, employment and relationships. The concept of "Internet Addiction" is used to explain uncontrollable, damaging use of technology. It is characterized as an impulse control disorder, comparable to pathological gambling, because of overlapping diagnostic criteria and symptomatology. Based on these studies, the IAT was constructed to capture the problematic behavior associated with compulsive use of technology, including online porn, internet gambling and compulsive use of online games and social media. The Internet Addiction Test emerged as the first validated measure of Internet and technology addiction. The assessments can be administered in a variety of mental health settings, including private practice clinics, schools, hospitals and residential programs. They can be used when there is suspicion of Internet addiction, as part of a broad intake assessment, or for use in a wellness curriculum to help participants evaluate their own Internet behavior. The IAT can also be a valuable pre-employment screening device, to detect internet addiction among job candidates, to improve productivity and reduce corporate liability. Based on 20 self-report items, the IAT assesses for the presence of addiction to the Internet, electronic entertainment, social media, and general use of electronic devices, and also measures the severity of addiction, in terms of mild, moderate or severe. Furthermore, because Internet addiction may be driven by different reasons and manifest in different ways, requiring different types of treatment, the IAT produces scores related to the following areas:

Advertising, materialism and consumption are central aspects of contemporary Western culture. We are bombarded with idealised images of the perfect body, desirable consumer goods, and affluent lifestyles, yet psychology is only just beginning to take account of the profound influence these consumer culture ideals have on individuals' sense of identity and worth. *Consumer Culture, Identity, and Well-Being* documents the negative psychological impact consumer culture can have on how individuals view themselves and on their emotional welfare. It looks at the social psychological dimensions of having, buying and wanting material goods, as well as the pursuit of media-hyped appearance ideals. In particular, it focuses on: the purchasing of material goods as a means of expressing and seeking identity, and the negative consequences of this psychological buying motivations in conventional buying environments and on the Internet the unrealistic socio-cultural beauty ideals embodied by idealized models. Throughout, different approaches from social psychology are integrated, such as self-completion, self-discrepancy and value theory, to create a comprehensive theoretical framework for understanding the impact of internalising core consumer culture ideals on how individuals see themselves and the implications this has for their psychological and physical health. This book is of interest to anybody who wants to find out more about the psychological effects of living in modern consumer societies on children, adolescents, and adults.

More specifically, it will be of interest to students and researchers in social psychology, sociology, media studies, communication and other social sciences, as well as to psychologists, health workers, and practitioners interested in the topics of identity, consumption pathologies, body image, and body-related behaviours.

The United States is unique in the industrialized world in the number of people without health insurance. In 2002, nearly 44 million Americans did not have health insurance coverage. Despite long-running study of this problem, the political debate on health insurance is often based on conventional wisdom and studies that haven't been integrated into a careful theoretical framework. In *Health Policy and the Uninsured*, leading experts in health policy survey the literature on this subject, synthesizing a wide range of health insurance studies into a comprehensive overview of the uninsured. They consider the methodological hurdles involved in the research, explore the complex interaction between health insurance and labor supply, and highlight the special issues facing children, racial or ethnic minorities and immigrants, the near-elderly, and people with psychiatric or substance abuse disorders. This coordinated critique serves several purposes: First, it summarizes for policy makers what we do not know about the uninsured. Second, it provides a framework for the health policy research needed to fill the remaining gaps in our knowledge. And finally, it serves as a useful primer for economists and other policy analysts.

From well-known classics & literary fiction and non-fiction to forgotten—or yet undiscovered gems—of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

### pH of the Skin: Issues and Challenges

Regular physical activity is proven to help prevent and treat noncommunicable diseases (NCDs) such as heart disease, stroke, diabetes and breast and colon cancer. It also helps to prevent hypertension, overweight and obesity and can improve mental health, quality of life and well-being. In addition to the multiple health benefits of physical activity, societies that are more active

can generate additional returns on investment including a reduced use of fossil fuels, cleaner air and less congested, safer roads. These outcomes are interconnected with achieving the shared goals, political priorities and ambition of the Sustainable Development Agenda 2030. The new WHO global action plan to promote physical activity responds to the requests by countries for updated guidance, and a framework of effective and feasible policy actions to increase physical activity at all levels. It also responds to requests for global leadership and stronger regional and national coordination, and the need for a whole-of-society response to achieve a paradigm shift in both supporting and valuing all people being regularly active, according to ability and across the life course. The action plan was developed through a worldwide consultation process involving governments and key stakeholders across multiple sectors including health, sports, transport, urban design, civil society, academia and the private sector.

### NEW DIRECTIONS IN THEORY AND PRACTICE

This unique multidisciplinary volume examines the dynamics of behavioral change and its maintenance, from the individual to the wider domains of public policy. Coverage traces how change may be achieved, sustained, or derailed, as well as underlying neurobiological, behavioral, and social processes that fuel unhealthy and risky behaviors. Contributors offer a wide range of prevention and intervention strategies for supporting positive health habits from improved food choices to abstinence to compliance with treatment. These mechanisms are then transferred to the societal level in studies of evolving public perception of salient issues such as climate change, gender disparities, and drug policy. Included among the topics: Motivating change in addiction via modulation of the dark side. Changing drug use and other health-related behavior in vulnerable populations. Change and maintaining change in school cafeterias. Understanding social structural barriers and facilitators to behavioral change. Strategic communication research to illuminate and promote public engagement with climate change. A provocative rendering of motivation in its macro and micro dimensions. Change and Maintaining Change will interest researchers, practitioners, and clinicians interested in diverse areas such as smoking and other addictions, improvement and relapse in therapy, development and treatment of anxiety disorders, and social cognition and decision-making.

The 7th Bandung Creative Movement conference presented the theme "Dynamics of Industrial Revolution 4.0" which discussed how the digital world and connectivity changed human culture in various aspects of life, and transformed in accordance to human needs and social culture. Digital technology has transformed society to serve people from manufacturing needs to smart cities, from network connectivity to people connectivity. The application of information technology has helped in improving live quality and environmental sustainability. Digital transformation is revolutionizing how businesses and workers interconnect to be more productive and efficient. The result is improved collaboration, faster processes and time-to-market, lower costs and better products. Devices are getting smarter, meaning they are able to perform more and more tasks without human intervention; moreover, these devices generate data that provide insights to further improve processes and gain greater efficiencies. Moreover, with the Internet of Things (IoT), all these smart devices are interconnected in ways that not only help make them even smarter, but also enhances the intelligence of the overall system. Digital technology is a formidable driver for the transformation of a highly carbon-dependent world into one that is more ecologically 'smart.' We are entering a new era of environmental innovation that is driving better alignment between technology and environmental goals. Since its first announcement in 2011, industrial revolution 4.0 has dynamically changed and transformed to adjust itself to the human needs and to serve more efficiency and effectiveness of everyday life as well as environmental enhancement. The 7th Bandung Creative Movement has brought forward discussions on dynamic changes, ups and downs, innovations, relations of industrial revolution of the internet of thing, data, automation, to human physical world, new art and aesthetic, business, product innovation, built environment, and education.

This global status report on prevention and control of NCDs (2014), is framed around the nine voluntary global targets. The report provides data on the current situation, identifying bottlenecks as well as opportunities and priority actions for

attaining the targets. The 2010 baseline estimates on NCD mortality and risk factors are provided so that countries can report on progress, starting in 2015. In addition, the report also provides the latest available estimates on NCD mortality (2012) and risk factors, 2010-2012. All ministries of health need to set national NCD targets and lead the development and implementation of policies and interventions to attain them. There is no single pathway to attain NCD targets that fits all countries, as they are at different points in their progress in the prevention and control of NCDs and at different levels of socioeconomic development. However all countries can benefit from the comprehensive response to attaining the voluntary global targets presented in this report.--Publisher description.

Written by a leading researcher in the field of Nutrition who is also the editor-in-chief of the "Journal of Clinical Nutrition," this book will introduce readers to the complexities of nutrition during the life cycle. It will show how dietary factors influence growth, maintenance, and repair throughout the life cycle. Provides a comprehensive understanding of developmental nutrition, including extensive material for those who want data and research, as well as practical information for those wanting a book for future reference. A logical organization starts with the fetal life and ends with the aged individual, while emphasizing the continuum of physiological changes that influence metabolic needs. For professionals working in the field of Nutrition.

The concept of expressing acidity as the negative logarithm of the hydrogen ion concentration was defined and termed pH in the beginning of the 20th century. The general usefulness of the pH concept for life science was recognized and later gained importance to analytical research. Reports on results of pH measurements from living skin established the term acid mantle - the skin's own protective shield that maintains a naturally acid pH. It is invisible to the eye but crucial to the overall wellbeing of skin. Chronic alkalization can throw this acid mantle out of balance, leading to inflammation, dermatitis, and atopic skin diseases. It is therefore no surprise, that skin pH shifts have been observed in various skin pathologies. It is also obvious that the pH in topically applied preparations may play an important role. Optimal pH and buffer capacity within topical preparations not only support stability of active ingredients and auxiliary materials, but may also increase absorption of the non-ionized species of an acidic or a basic active ingredient. They may even open up opportunities to modify and "correct" skin pH and hence accelerate barrier recovery and maintain or enhance barrier integrity. Further efforts are needed to standardize and improve pH measurements in biological media or pharmaceutical/cosmetic vehicles to increase and ensure quality, comparability, and relevance of research data. In this volume, we present a unique collection of papers that address past, present and future issues of the pH of healthy and diseased skin. It is hoped that this collection will foster future efforts in clinical and experimental skin research.
