Basic and Clinical Pharmacology and Toxicology Evaluating clinical effects based on the amount of exposure is a basic toxicology principle called dose-response. The dose is the total amount of chemical absorbed during an exposure. Dose depends on the concentration of the chemical and duration (contact time) of the exposure. Chemicals cause predictable toxic effects based on the dose. Key Principles of Toxicology and Exposure - CHEMM Toxicology: The adverse events of drugs, chemicals or any poison on environment and living organisms including humans and animals with their detection, symptoms, pathogenesis, mechanism and treatment can be studied by a branch of science called as toxicology.
