Removal of Contaminants at the Micro and Nanoscale CRC Press

There is an abundance of information available on the internet regarding industrial cleaning. The difficulty lies in sorting out fact from fiction and weeding out significant information pertaining to modern industrial cleaning applications, not household issues. The marketing of "green" or "eco-friendly" products often uses scare tactics in promoting a specific chemistry at the expense of more effective options. This book is based on more than thirty years of experience formulating industrial cleaning products available commercially to markets ranging from aerospace, automotive manufacturing and remanufacturing, metal finishing, optics and electronics. References are taken from recognized experts in the field. As environmental issues come to the forefront and the economic downturn of the first decade of the Twenty-First Century cause us to optimize our production processes, a new look at modern industrial cleaning is warranted. JoAnn Quitmeyer retired as Director of Research and Development at Kyzen(r) Corporation, a major chemical supplier of cleaning chemistries used in electronics, semi-conductor, metal finishing and optics markets, located in Nashville, TN. She spent over thirty years formulating cleaners and lubricants for industrial applications including ten years at Kyzen Corporation, fifteen years as a Senior Research Associate at W.R.Grace(r) in Lexington, MA where she developed the Daraclean(r)and Daracool(r) product lines and thirteen years as a Senior Chemist with the Magnus Division of Economics Laboratory (EcoLab) in St. Paul, MN. She was educated at the University of Minnesota. Over the past thirty years JoAnn has had dozens of articles published in professional magazines such as Clean Tech Magazine, Pollution Engineering and Product Finishing Magazine. She also has had chapters published in various books, most recently in Second Edition Handbook for Critical Cleaning, Cleaning Agents and Systems, Edited by Barbara and Edward Kanegsberg. She has lectured at numerous Universities and conferences on cleaning and lubrication and was invited to address the United Nations in Geneva, Switzerland on the feasibility of alternative cleaning options to replaced banned CFC's. More than 150 commercially successful products have been formulated by JoAnn during her years as a formulat

Handbook for Critical Cleaning William Andrew

With all the cleaning approaches available, how do you choose which one is best for your needs? Components manufacturers wonder which will provide a competitive edge. Chemists and engineers worry about the effect of any process modification on a critical component or on the stability of an irreplaceable antique. There is no silver bullet, no magic drop-in solution. The best approach is application specific and often location specific. Handbook for Critical Cleaning provides the tools you need to select the best approach in a rapidly changing world. Rigorous in its treatment of technical issues, broad in scope, and clearly written, the book includes cleaning agent options, cleaning systems/chemical and equipment integration, contamination control, cleanliness standards, analytical testing, process selection, implementation, and maintenance, specific applications areas, and regulatory considerations and outlook. Cleaning, which was once a simple

decision among a few cleaning agents and types of equipment, is now recognized as a major factor in process control and product improvement. Choosing the best process involves an understanding of chemistry, engineering, safety and regulatory requirements, as well as a realistic assessment of the strengths and limitations of the local workforce. Handbook for Critical Cleaning shows you not only what processes are available and how to evaluate them, but how to customize cleaning procedures to meet your needs.

Although supercritical fluid (SCF) technology is now widely used in extraction and purification processes (in the petrochemical, food and pharmaceuticals industries), this book is the first to address the new application of cleaning. The objective is to provide a roadmap for readers who want to know whether SCF technology can meet their own processing and cleaning needs. It is particularly helpful to those striving to balance the requirements for a clean product and a clean environment. The interdisciplinary subject matter will appeal to scientists and engineers in all specialties ranging from materials and polymer sciences to chemistry and physics. It is also useful to those developing new processes for other applications, and references given at the end of each chapter provide links to the wider body of SCF literature. The book is organized with topics progressing from the fundamental nature of the supercritical state, through process conditions and materials interactions, to economic considerations. Practical examples are included to show how the technology has been successfully applied. The first four chapters consider principles governing SCF processing, detailing issues such as solubility, design for cleanability, and the dynamics of particle removal. The next three chapters discuss surfactants and microemulsions, SCF interaction with polymers, and the use of supercritical carbon dioxide (CO2) as a cleaning solvent. The closing chapters focus on more practical considerations such as scaleup, equipment costs, and financial analysis.
