Fundamentals of Investments was written to: 1. Focus on students as investment managers, giving them information they can act on instead of concentrating on theories and research without the proper context. 2. Offer strong, consistent pedagogy, including a balanced, unified treatment of the main types of financial investments as mirrored in the investment world. 3.

Organize topics in a way that makes them easy to apply--whether to a portfolio simulation or to real life--and support these topics with hands-on activities. The approach of this text reflects two central ideas. First, there is a consistent focus on the student as an individual investor or investments manager. Second, a consistent, unified treatment of the four basic types of financial instruments--stocks, bonds, options, and futures--focusing on their characteristics and features, their risks and returns, and the markets in which they trade.

"The basic thrust of this eleventh edition of Multinational Financial Management (MFM) is to provide a conceptual framework within which the key financial decisions of the multinational firm can be analyzed. Thus, it builds on and extends the valuation framework provided by domestic corporate finance to

account for dimensions unique to international finance. Multinational Financial Management presumes a knowledge of basic corporate finance, economics, and algebra. However, it does not assume prior knowledge of international economics or international finance and is therefore self-contained in that respect"--
