Written by Dianne Inglis and Jeffrey Kenneally, the workbook includes more than 70 paramedic-focused clinical skills that link underpinning theory and knowledge with expectations for contemporary clinical practice. To ensure the skills are performed correctly and to standard, the resource is further strengthened with a ready-made assessment tool, ideal for both self-directed learning and instructor use. The text is designed for practising skill development, and preparation for assessment and clinical placement. **Clinical Skills for Paramedic Practice 1e** includes two key components: practical skill instruction and the Objective Structured Clinical Examination (OSCE) assessment checklist. The skills sections contain clear step-by-step written and photographic instruction in basic to advanced clinical skills, with rationales provided to enhance knowledge acquisition and clinical decision-making. The OSCE checklists allow students and instructors to easily track and assess progress in skill development. Step-by-step skill instruction combined with an OSCE assessment checklist Structured reflection and end-of-chapter questions to assist with deeper understanding of key concepts and application to practice Designed specifically for use by Australian and New Zealand paramedics An eBook and downloadable skill and assessment sheets are included with purchase of the print book Additional resources on Evolve: • An eBook on VitalSource Student and Instructor Resources on Evolve: Clinical skill work instructions Formative Clinical Skill Assessment (F-CSAT) Summative Clinical Skill Assessment (S-CSAT) Performance Improvement Plan (PIP) Formative Clinical Skill Assessment (F-CSAT) key Direct Observation of Procedural Skills (DOPS)

D.G.JULIAN Cardiology has been advancing on a broad front and in recent years we have learned much about the basic mechanisms underlying heart disease, and developed many new methods of diagnosis and treatment. This book discusses in depth some of the most important aspects of these. One of the most exciting areas of research has been in molecular biology; Tybjrerg-Hansen and Humphries describe how, following the pioneering Nobel prize-winning work of Goldstein and Brown, gene probes are being used to discover the genetic causes of coronary artery disease, especially in the hyperlipidaemias but also in thrombotic states. These developments, together with the introduction of powerful lipid-lowering agents has triggered interest in the primary hyperlipidaemias, which are frequently hereditary. Betteridge discusses their diagnosis and management. Quyyumi describes how a greater knowledge of the physiology and pathology of the coronary circulation has led to a better understanding of the causes of angina pectoris and of 'silent ischaemia'. Crean deals with the difficult topic of unstable angina, which has caused a lot of controversy in the past, but whose investigation and management is now broadly agreed.
