*Crash Course in Cataloging for Non-catalogers* Routledge  
Published to coincide with the twentieth anniversary of the fall of the Berlin Wall — a definitive and ground-breaking account of the revolutionary ideology that changed the modern world. The inexorable rise of Communism was the most momentous political phenomenon of the first half of the twentieth century. Its demise in Europe and its decline elsewhere have produced the most profound political changes of the last few decades. In this illuminating book, based on forty years of study and a wealth of new sources, Archie Brown provides a comprehensive history as well as an original and highly readable analysis of an ideology that has shaped the world and still rules over a fifth of humanity. A compelling new work from an internationally renowned specialist, *The Rise and Fall of Communism* promises to be the definitive study of the most remarkable political and human story of our times.

[Back to Basics](#) Libraries Unlimited

Here is the first book on the subject written for library technicians. *Cataloging and Classification for Library Technicians* describes all aspects of cataloging and classification of library materials (book and non-book), emphasizing copy cataloging but also discussing original cataloging. Most books are written for professional catalogers or MLS level students and contain more cataloging details than library technicians need while not supplying information on library technicians' roles in the modern information world. *Cataloging and Classification for Library Technicians* contains the right amount of information presented in an easy-to-understand manner to help library technicians do their jobs effectively. *Cataloging and Classification for Library Technicians* interprets and explains cataloging rules and how they should be applied. Kao describes library organization and

personnel patterns to illustrate the relationship between library technicians and other library staff. She examines duties commonly performed by library technicians in chapters on: library catalogs tools used for cataloging library materials descriptive cataloging subject headings classification systems copy cataloging the cataloging department issues and trends Each chapter contains definitions of relevant terminology and review questions to focus learning. A list of suggested readings is also included for individuals who want or need to know more about a particular aspect of cataloging or classification. The book is an ideal text to use in programs for library technical assistants and a handy reference for practicing library technicians.

### CLASSIFICATION IN THEORY AND PRACTICE

Chandos Publishing

Designed to complement every introductory library reference course, this is the perfect text for students and librarians looking to expand their personal reference knowledge, teaching failsafe methods for identifying important materials by matching specific types of questions to the best available sources, regardless of format. Guided by a national advisory board of educators and practitioners, this thoroughly updated text expertly keeps up with new technologies and practices while remaining grounded in the basics of reference work. Chapters on fundamental concepts, major reference sources, and special topics provide a solid foundation; the text also offers fresh insight on core issues, including ethics, readers' advisory, information literacy, and other key aspects of reference librarianship; selecting and evaluating reference materials, with strategies for keeping up to date; assessing and improving reference services; guidance on conducting reference interviews with a range of different library users, including children and young adults; a new discussion of reference as programming; important special reference topics such as Google search, 24/7 reference, and virtual reference; and delivering reference services across multiple platforms As

librarians experience a changing climate for all information services professionals, in this book Cassell and Hiremath provide the tools needed to manage the ebb and flow of changing reference services in today's libraries.

### **An introduction to AACR2, RDA, DDC, LCC, LCSH and MARC 21 Standards** ABC-CLIO

Ideal for students and both beginning and practicing catalogers in public, school, and academic libraries, this updated workbook offers targeted, hands-on exercises that enhance understanding of description, classification, subject analysis, subject heading application, and MARC 21 subject analysis. • Provides more than 100 examples that together encompass virtually all types of materials libraries collect and catalog, with MARC "answer" records • Offers exercises that allow practice in AACR2r and RDA, description, subject classification, subject heading application, classification, subject analysis, and MARC 21 • Covers both RDA and AACR2r answer records for selected exercises • Includes non-English materials • Links to a website that provides for multiple approaches and answer records and enables you to view all the graphics in color and enlarge them as needed • Links instruction to an additional website that provides answer records for all exercises

### **ASSESSMENT OF CATALOGING AND METADATA SERVICES**

Littleton, Colo. : Libraries Unlimited

Cataloging for School Librarians, Second Edition presents the theory and practice of cataloging and classification to students and practitioners needing a clear sequential process to help them overcome cataloging anxiety. By following the instructions in this book, the new cataloger will become proficient at creating bibliographic records that meet current national standards, and make library materials accessible to students and faculty. This new edition fully integrates RDA while referencing its antecedent, AACR2. FRBR, Sears, the Dewey Decimal Classification and the implications of Web-Scale Discovery services are covered. It presents numerous examples of how to catalog books, non-print and electronic library materials using the MARC format. To reinforce learning, each chapter concludes with a revised review quiz and critical thinking questions. Cataloging for School Librarians, Second Edition includes sample full MARC records, a glossary and an index.

### **Comparative and Evolutionary Perspectives** Routledge

A new edition of this best-selling textbook reintroduces the topic of library cataloging from a fresh, modern perspective. • Delineates the new cataloging landscape • Shares a principles-based perspective • Provides introductory text for beginners and intermediate students • Emphasizes descriptive and subject cataloging, as well as format-neutral cataloging • Covers new cataloging rules and RDA

### **A PRACTICAL GUIDE TO LIBRARY OF CONGRESS CLASSIFICATION**

Scarecrow Press

The fourth edition of the late Lois Mai Chan's classic Cataloging and Classification covers the analysis and representation of methods used in describing, organizing, and providing access to resources made available in or through libraries. Completely updated to incorporate the changes that have occurred during the interval between the third and fourth editions, this book is the standard text for the teaching and understanding of cataloging and classification.

### **CATALOGING AND CLASSIFICATION FOR LIBRARY TECHNICIANS**

ABC-CLIO

Recent field studies of a variety of mammalian species reveal a surprisingly high frequency of infanticide - the killing of unweaned or otherwise maternally dependent offspring. Similarly, studies of birds, fish, amphibians, and invertebrates demonstrate egg and larval mortality in these species, a phenomenon directly analogous to infanticide in mammals. In this collection, Hausfater and Hrdy draw together work on animal and human infanticide and place these studies in a broad evolutionary and comparative perspective. Infanticide presents the theoretical background and taxonomic distribution of infanticide, infanticide in nonhuman primates, infanticide in rodents, and infanticide in humans. It examines closely sex allocation and sex ratio theory, surveys the phylogeny of mammalian interbirth intervals, and reviews data on sources of egg and larval mortality in a variety of invertebrate and lower vertebrate species. Dealing with infanticide in nonhuman primates, two chapters critically examine data on infanticide in langurs and its broader theoretical implications. By reviewing sources of infant mortality in populations of small mammals and new laboratory analyses of the causes and consequences of infanticide, this work explores such issues as the ontogeny of infanticide, proximate cues of infants and females which elicit infanticidal behavior in males, the genetical basis of infanticide, and the hormonal determinants. Hausfater and Sarah Blaffer Hrdy, through their selection of materials for this book, evaluate the frequency, causes, and function of infanticide. Historical, ethnographic, and recent data on infanticide are surveyed. "Infanticide" summarizes current research on the evolutionary origins and proximate causation of infanticide in animals and man. As such it will be indispensable reading for anthropologists and behavioral biologists as well as ecologists, psychologists, demographers, and epidemiologists.

### **CATALOGING CORRECTLY FOR KIDS**

Routledge

The health of human populations around the world is constantly changing and the health profiles of most nations in the early twenty-first century global health landscape are unrecognizable compared with those of just a century ago. This book examines and explains these health changes and considers likely future patterns and changes. While the overall picture charted is one of progress and improvement, certain unfortunate regressions and stubbornly persistent health inequalities are equally shown to be part of the evolving patterns of global health. The chapters of the book are organized in three major parts: The first part introduces readers to the principal concepts of global health, and to the idea of populations having distinctive health profiles. In particular, it explores how those profiles can be measured, and how they change, using the umbrella concepts and theories of epidemiological and health transition. Building on the first section, the second part focuses on the evolution of health states, as well as paying particular attention to the reasons for the many subnational inequalities in global health. It also examines health challenges such as the continuing infectious disease burden and current emerging 'epidemics'. The final part transports readers from the current health scene to future possible and probable health scenarios, acknowledging the challenges presented by global environmental change, as well as issues centred around geopolitics and human security. Using clear and original explanations of complex issues, this text makes extensive use of boxed case studies and international examples, with thought-provoking discussion questions posed for readers at the end of each chapter. Global Health is essential reading for students of global health, public health and development studies.

**Cataloguing and Classification** Marcel Dekker Incorporated  
A workbook for a beginning course in cataloguing and

classification.

*Wynar's Introduction to Cataloging and Classification* Routledge  
Cataloging and Classification introduces concepts and practices in cataloging and classification, and common library standards. The book introduces and analyzes the principles and structures of library catalogues, including the application of AACR2, RDA, DDC, LCC, LCSH and MARC 21 standards, and conceptual models such as ISBD, FRBR and FRAD. The text also introduces DC, MODS, METS, EAD and VRA Core metadata schemes for annotating digital resources. Explains the theory and practice of bibliographic control Offers a practical approach to the core topics of cataloging and classification Includes step-by-step examples to illustrate application of the central cataloging and classification standards Describes the new descriptive cataloging standard RDA, and its conceptual ground, FRBR and FRAD Guides the reader towards cataloging and classifying materials in a digital environment

An Introduction Rowman & Littlefield Publishers

This book elucidates the concepts and innovative models around prospective developments with respect to Library Classification and Cataloging. It attempts to further enlighten the readers about the new concepts in this field. Library classification and cataloging are a part of library management and have significantly evolved over the years due to rapid technological advancements. There are varied types of library resource classification methods such as national schemes or universal schemes, etc. This book provides detailed information about all the major classification and cataloging systems implemented in libraries across the globe. Those who are looking to develop a thorough understanding of the field will find this text immensely beneficial.

**Crash Course in Basic Cataloging with RDA** Libraries Unltd Incorporated

Written by experienced practitioners and researchers, *Assessment of Cataloging and Metadata Services* provides the reader with many examples of how assessment practices can be applied to the work of cataloging and metadata services departments. Containing both research and case studies, it explores a variety of assessment methods as they are applied to the evaluation of cataloging productivity, workflows, metadata quality, vendor services, training needs, documentation, and more. Assessment methods addressed in these chapters include surveys, focus groups, interviews, observational analyses, workflow analyses, and methodologies borrowed from the field of business. *Assessment of Cataloging and Metadata Services* will help managers and administrators as they attempt to evaluate and communicate the value of what they do to their broader communities, whether they are higher education institutions, another organization, or the public. This book will help professionals with decision making and give them the tools they need to identify and implement improvements. The chapters in this book were originally published in a special issue in *Cataloging & Classification Quarterly*.

**Cataloging and Classification** Doubleday Canada

In this landmark edition of the classic work, Taylor offers a complete, up-to-date, and practical guide to the world of cataloging and classification as it stands at the beginning of the 21st century. The new edition emphasizes online catalogs and cataloging, with all the attendant terminology. It covers the 2002 revision of AACR2, MARC 21, the 21st edition of Dewey Decimal Classification, current schedules of the LC Classifications, the latest Library of Congress Subject Headings, and the 17th edition of the Sears List of Subject Headings. In addition, Taylor addresses such vital issues as Internet cataloging, international access control, Natural Language Processing, and ontologies.

**Cataloging and Classification** Cataloging and ClassificationAn IntroductionThe fourth edition of the late Lois Mai Chan's classic *Cataloging and Classification* covers the analysis and representation of methods used in describing, organizing, and providing access to resources made available in or through libraries. Completely updated to incorporate the changes that have occurred during the interval between the third and fourth editions, this book is the standard text for the teaching and understanding of cataloging and classification.*Cataloging and Classification*An Introduction

Understanding the visitor experience provides essential insights into how museums can affect people's lives. Personal drives, group identity, decision-making and meaning-making strategies, memory, and leisure preferences, all enter into the visitor experience, which extends far beyond the walls of the institution both in time and space. Drawing upon a career in studying museum visitors, renowned researcher John Falk attempts to create a predictive model of visitor experience, one that can help museum professionals better meet those visitors' needs. He identifies five key types of visitors who attend museums and then defines the internal processes that drive them there over and over again. Through an understanding of how museums shape and reflect their personal and group identity, Falk is able to show not only how museums can increase their attendance and revenue, but also their meaningfulness to their constituents.

An Introduction to AACR2, RDA, DDC, LCC, LCSH and MARC 21 Standards Libraries Unlimited Incorporated

Following on from the first edition of this book, the second edition fills the gap between more complex theoretical texts and those books with a purely practical approach. The book looks at major library classification schemes in use in Europe, UK and the USA, and includes practical exercises to demonstrate their application. Importantly, classifying electronic resources is also discussed. *Classification in Theory and Practice* aims to demystify a very complex subject, and to provide a sound theoretical underpinning, together with practical advice and development of practical skills. Chapters concentrate purely on classification rather than cataloging and indexing, ensuring a more in-depth coverage of the topic. covers the latest Dewey Decimal Classification, 23rd edition provides practical advice on which schemes will be most suitable for different types of library collection covers classification of digital resources explores recent developments in digital resources and tagging

### **INTRODUCTION TO CATALOGING AND CLASSIFICATION**

Rowman & Littlefield

*Cataloging and Classification* introduces concepts and practices in cataloging and classification, and common library standards. The book introduces and analyzes the principles and structures of library catalogues, including the application of AACR2, RDA, DDC, LCC, LCSH and MARC 21 standards, and conceptual models such as ISBD, FRBR and FRAD. The text also introduces DC, MODS, METS, EAD and VRA Core metadata schemes for annotating digital resources. Explains the theory and practice of bibliographic control Offers a practical approach to the core topics of cataloging and classification Includes step-by-step examples to illustrate application of the central cataloging and classification standards Describes the new descriptive cataloging standard RDA, and its conceptual ground, FRBR and FRAD Guides the reader towards cataloging and classifying materials in a digital environment

### **UNLOCKING THE MYSTERIES OF CATALOGING: A WORKBOOK OF EXAMPLES, 2ND EDITION**

Rowman & Littlefield

Now thoroughly updated to include recent changes with RDA, this easy-to-use primer provides an introduction to standardized cataloging that will benefit library technicians as well as students in library technician and teacher librarian programs. \* Provides clear and comprehensible explanations of the rules and tools used by libraries to catalog and classify their materials \* Illustrative examples for each aspect of cataloging, classification, RDA, and MARC computer encoding \* Covers all types of material formats, including books, audiovisuals, images, sound, electronic resources, and more \* Offers numerous practical exercises as well as a glossary of cataloging terms and tools

*Introduction to Cataloging and Classification* Rowman & Littlefield

The fourth edition of the late Lois Mai Chan's classic *Cataloging and Classification* covers the analysis and representation of methods used in describing, organizing, and providing access to resources made available in or through libraries. Since the last edition published in 2007, there have been dramatic changes in cataloging systems from the Library of Congress. The most notable being the shift from AACR2 to Resource Description and Access (RDA) as the new standard developed by the Library of Congress. With the help of the coauthor, Athena Salaba, this text is modified throughout to conform to the new standard. Retaining the overall outline of the previous edition, this text presents the

essence of library cataloging and classification in terms of three basic functions: descriptive cataloging, subject access, and classification. Within this framework, all chapters have been rewritten to incorporate the changes that have occurred during the interval between the third and fourth editions. In each part, the historical development and underlying principles of the retrieval mechanism at issue are treated first, because these are considered essential to an understanding of cataloging and classification. Discussion and examples of provisions in the standards and tools are then presented in order to illustrate the operations covered in each chapter. Divided into five parts—a general overview; record production and structure, encoding formats, and metadata records; RDA; subject access and controlled vocabularies; and the organization of library resources—each part of the book begins with a list of the standards and tools used in the preparation and processing of that part of the cataloging record covered, followed by suggested background readings selected to help the reader gain an overview of the subject to be presented. This book is the standard text for the teaching and understanding of cataloging and classification.
