"Filmed in various parts of Ecuador, the program offers 5-7 minutes of footage for each of the eighteen lessons in the Vistas student textbook. Each module tells the continuing story of four college students from different Spanish-speaking countries (Ecuador, Spain, Mexico, and Puerto Rico) who spend a vacation break on a bus tour of the Ecuadorian countryside with the ultimate goal of climbing a volcano."-Video container

God's call for us doesn't end when we retire. In fact, many of our biblical saints were

in their later years before God called them to the adventures for which we know them: leadership, new life, transformation, healing. Their lives demonstrate that true callings are discerned not simply through reason and circumstance but also through self-knowledge and conversation with God. In *Answering God's Call*, spiritual director Barbara Lee uses Scripture-focused prayer to help readers connect with some of our elder saints and consider what God reveals to us through their lives. We will spend time with Anna and Abram, Simon's mother-in-law and Namaan the Syrian, a widow, a leper, a king, and a late-in-life mother-to-be, among others, who will open

for us the calls to trust  
 humility stillness  
 forgiveness service  
 radical change letting  
 go choosing caregiving  
 courage... Dare to  
 receive what your life  
 is now—and ask God  
 how to live it best.

Pasos Y Puentes Heinle & Heinle Pub This book presents a contemporary view of the role of information quality in information fusion and decision making, and provides a formal foundation and

the implementation strategies required for dealing with insufficient information quality in building fusion systems for decision making. Information fusion is the process of gathering, processing, and combining large amounts of information from multiple and diverse sources, including physical sensors to human intelligence reports and social media. That data and information may be unreliable, of low fidelity, insufficient resolution, contradictory, fake and/or redundant. Sources may provide unverified reports obtained from other sources resulting in correlations and biases. The success of the fusion processing depends on how well

knowledge produced by the processing chain represents reality, which in turn depends on how adequate data are, how good and adequate are the models used, and how accurate, appropriate or applicable prior and contextual knowledge is. By offering contributions by leading experts, this book provides an unparalleled understanding of the problem of information quality in information fusion and decision-making for researchers and professionals in the field.

The Symposium

presented and

discussed the latest

research on new theories and advanced applications of automatic systems, which are developed for manufacturing technology or are applicable to advanced manufacturing systems. The topics included computer integrated manufacturing, simulation and the increasingly important areas of artificial intelligence and expert systems, and applied them to the broad spectrum of problems that the modern manufacturing engineer is likely to encounter in the design and application of increasingly complex automatic systems.

In New Mobilities: Smart Planning for Emerging Transportation Technologies, transportation expert Todd Litman examines 12 emerging transportation modes and services that are likely to significantly affect our lives: bike- and carsharing, micro-mobilities, ridehailing

and micro-transit, public transit innovations, telework, autonomous and electric vehicles, air taxis, mobility prioritization, and logistics management. Public policies around New Mobilities can either help create heaven, a well-planned transportation system that uses new technologies intelligently, or hell, a poorly planned transportation system that is overwhelmed by conflicting and costly, unhealthy, and inequitable modes. His expert analysis will help planners, local policymakers, and concerned citizens to make informed choices about the New Mobility revolution.

Island Press  
Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best

practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the

forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an

essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
