Elex Media Komputindo Rencana Anggaran Biaya bangunan atau konstruksi adalah perkiraan biaya yang dihitung berdasarkan gambar rencana bangunan. Penyusunan RAB sangat diperlukan sebagai pedoman agar biaya riil tidak terlalu jauh

dari biaya perkiraan. Estimator yang menghitung RAB pada umumnya membuat RAB menggunakan Excel untuk mengelompokkan data, membuat formula, menghubungkan masing-masing data, dan pekerjaan lainnya secara manual. Padahal, ketepatan dan kecepatan hasil perhitungan RAB secara manual terbilang rendah. Panduan Macro Excel untuk

Membuat Aplikasi RAB Bangunan ini berisi panduan langkah demi langkah pembuatan aplikasi RAB bangunan siap pakai menggunakan macro Excel. Buku ini merupakan revisi atas Membuat Aplikasi RAB Bangunan dengan Macro Excel dengan banyak penambahan fitur penting dan perbaikan dalam aplikasi. Fitur dalam aplikasi RAB selengkapny adalah: - Aplikasi

menarik dan mudah digunakan (user friendly). - Database sumber daya proyek (bahan, upah dan alat bantu) dapat diinput, diedit, dan dicari dengan mudah dan cepat. - Bahan, upah, dan alat bantu dapat diurutkan berdasarkan kelompok, kode, atau nama. - Analisa harga satuan (AHS) pekerjaan dapat dihitung dengan mudah dan cepat. - Hasil perhitungan AHS secara

otomatis akan disimpan dalam database. - AHS dapat diedit dan dihapus menggunakan aplikasi. - Fitur pencarian bahan, upah, alat bantu, dan AHS. Meskipun disusun menggunakan Excel 2010, buku ini juga dapat dimanfaatkan oleh pengguna Excel 2007.

Robert Peurifoy was a giant in the field of

construction engineering and authored several books during his lifetime. This book last published in 1989 and will capitalize on the well-known name of the author. In this edition, computer calculations of costs and of modeling have been added as well as updated statistics, computer related examples and new problems. Civil, Environmental, and Construction Management Engineering

Majors and Professionals will benefit from having this title on their shelf. This edition retains the conceptual strengths of the Peurifoy approach and organization from the previous edition but the new problems and computer-based examples and new up-to-date construction data make it the only choice in academia or industry.  Poor durability of concrete is a continuing concern to owners of structures and their professional advisors. Advances in methods of assessing and predicting durability are being made in many areas, and this book provides a state of art review of the current situation. Contributions from leading researchers and consultants make it a valuable guide for all those responsible for concrete buildings and structures.

 Be more effective with less effort by learning how to identify and leverage the 80/20 principle: that 80 percent of all our results in business and in life stem from a mere 20 percent of our efforts. The 80/20 principle is one of the great secrets of highly effective people and organizations. Did you know, for example, that 20 percent of customers account for 80 percent of revenues? That 20 percent of our time accounts for 80 percent of the work we accomplish? The 80/20 Principle shows how we can achieve much more with much less effort, time, and resources, simply by identifying and focusing our efforts on the 20 percent that really counts.

Although the 80/20 principle has long influenced today's business world, author Richard Koch reveals how the principle works and shows how we can use it in a systematic and practical way to vastly increase our effectiveness, and improve our careers and our companies. The unspoken corollary to the 80/20 principle is that little of what we spend our time on actually

counts. But by concentrating on those things that do, we can unlock the enormous potential of the magic 20 percent, and transform our effectiveness in our jobs, our careers, our businesses, and our lives. Panduan Praktis Menghitung RAB untuk Membangun Rumah John Wiley & Sons
