With Niuhi sharks, even out of the water, you're not safe. My dreams are nightmares. I don't dare fall asleep. Guro Hari's teaching me Filipino knife fighting, but I'm too scared to come out of the bathroom. I'd rather learn Lua and train with Jay and Char Siu, but Uncle Kahana won't let me. He says it's for our safety,

but I don't believe him. Uncle Kahana's obsessed with Niuhi stories, Hawaiian myths about sharks in human form. If he's right, even out of the water, no one's safe. I have a secret knife I call Shark Tooth. I may have to use it. That thought excites me. And that's the scariest thing of all.

One Shark, No Swim is Book 2 in the Niuhi Shark Saga trilogy. Told from an indigenous perspective and set in a contemporary Hawaiian world where all the Hawaiian myths and legends are real, the series explores belonging, adoption, being different, bullying, defining family, and learning to turn weaknesses into strengths. Through the series, Zader discovers he's not really a

boy allergic to water; he's something much more special, dangerous, and powerful. His adoptive brother Jay discovers what happens when the golden surfing star falls from his pedestal and has to choose to make the long climb back from serious injury. It's the ties that bind and support the brothers that allow them to create their own destinies. As typical local islanders, characters use common Hawaiian and Pidgin words and phrases. The meaning is usually clear from the context, but there is also a Hawaiian & Pidgin Glossary for additional support. Each chapter begins with a related island word or phrase and its definitions. A Discussion Guide for book club or

classroom use is included. Free additional classroom support materials are available on [www.NiuhiSharkSaga.com](http://www.NiuhiSharkSaga.com). *One Boy, No Water*, Book 1 in the Niuhi Shark Saga, was a 2017 Nene Award Nominee. The Nene Award is Hawaii's Children's Choice Book Award recognizing outstanding literary works.

Overcoming Fear One Fish at a Time

Harper Collins

In this remarkable groundbreaking book, a documentarian and conservationist, determined to dispel misplaced fear and correct common misconceptions, explores

in-depth the secret lives of sharks—magnificent creatures who play an integral part in maintaining the health of the world's oceans and ultimately the planet. From the Jaws blockbusters to Shark Week, we are conditioned to see sharks as terrifying cold-blooded underwater predators. But as Ocean Guardian founder William McKeever reveals, sharks are evolutionary marvels essential to maintaining a balanced ecosystem. We can learn much from sharks, he argues, and our knowledge about them continues to grow. The first book to reveal in full the hidden lives of sharks, *Emperors of the Deep* examines four species—Mako, Tiger, Hammerhead, and Great White—as never before, and includes fascinating details such as: Sharks are 50-million years older than trees; Sharks have survived five extinction level events, including the one that killed off the dinosaurs; Sharks have electroreception, a sixth-sense that lets them pick up on electric fields generated by living things; Sharks can dive 4,000 feet below the surface; Sharks account for only 6 human fatalities per year, while humans kill 100 million sharks per year. McKeever goes back through time to probe the shark's pre-historic secrets and how it has become the world's most feared and most misunderstood predator, and takes us on a pulse-pounding tour around the world and deep under the water's surface, from the frigid waters of the Arctic Circle to the coral reefs of the tropical Central Pacific, to see sharks up close in their natural habitat. He also interviews ecologists, conservationists, and world-renowned shark experts, including the founders of Greenpeace's Rainbow Warrior, the head of the Massachusetts Shark Research Program, and the self-professed "last great shark hunter." At once a deep-dive into the misunderstood world of sharks and an urgent call to protect them, *Emperors of the Deep* celebrates this wild species that hold the key to unlocking the mysteries of the ocean—if we can prevent their extinction from climate change and human hunters.

*How to Swim with the Sharks: A Survival Guide for Leadership in Diverse Environments*, provides real-life vignettes of personal and professional triumphs. Each story offers tried and proven leadership techniques for use in challenging business or personal environments. The book also addresses management styles useful for building and managing teams. While the book covers situations in professional environments, it could easily be adapted to situations in community organizations or in schools. Unique to business management literature, this book covers a key element often overlooked in other books: office politics. The book is written for those who, despite being highly skilled and qualified, encounter setbacks due to office power dynamics. The book is organized in a very easy-to-read format. Each chapter begins with a dilemma, followed by a strategy, advantage and reflection to help one tackle the dilemma. Then, the chapter concludes with brief "take-away" tips that will help readers successfully swim with the sharks.

Individuals are not racist by intent; they are racist by culture, heritage, and education. If I were to ask anyone if they were a racist, they would immediately deny it as a possibility. They would espouse their wonderful humanitarian acts, or friends of color that would support an embracement of diversity that would make us all proud. The truth, I have never met a racist that knew they were racist. Even when educated as to what they have done, they would go to their grave stating that under no circumstances should I ever consider them a racist. This book is designed to tell you that it does not matter how many racists you meet in the office, you can still be successful. This book is designed to help you identify, and cope, and achieve success in those corporate environments that are not well. It provides you with advice on how to "swim with sharks in dark water." This book will help you to use your "Spidey senses," to trust your gut, to identify when you are working on a plantation, how to cope until you can leave. Oh, by the way, I need to tell you that you do not have the power at any time on any day to fix the plantation, without permanently damaging your career. The people who have fixed these issues have sacrificed their career, possibly their livelihood to ensure that we do not experience what they did. They shall always be the nameless heroes of our generation. We will always be indebted to those individuals who spoke up and lost their livelihood as a result. You need to understand that making a difference has a cost, and those that have done this have paid dearly.

**SHARKS AND PEOPLE**

Clarion Books

At once feared and revered, sharks have captivated people since our earliest

human encounters. Children and adults alike stand awed before aquarium shark tanks, fascinated by the giant teeth and unnerving eyes. And no swim in the ocean is undertaken without a slight shiver of anxiety about the very real—and very cinematic—dangers of shark bites. But our interactions with sharks are not entirely one-sided: the threats we pose to sharks through fisheries, organized hunts, and gill nets on coastlines are more deadly and far-reaching than any bite. In *Sharks and People* acclaimed wildlife photographer Thomas Peschak presents stunning photographs that capture the relationship between people and sharks around the globe. A contributing photographer to

National Geographic, Peschak is best known for his unusual photographs of sharks—his iconic image of a great white shark following a researcher in a small yellow kayak is one of the most recognizable shark photographs in the world. The other images gathered here are no less riveting, bringing us as close as possible to sharks in the wild. Alongside the photographs, *Sharks and People* tells the compelling story of the natural history of sharks. Sharks have roamed the oceans for more than four hundred million years, and in this time they have never stopped adapting to the ever-changing world—their unique cartilage skeletons and array of super-senses mark them as one of the

most evolved groups of animals. Scientists have recently discovered that sharks play an important role in balancing the ocean, including maintaining the health of coral reefs. Yet, tens of millions of sharks are killed every year just to fill the demand for shark fin soup alone. Today more than sixty species of sharks, including hammerhead, mako, and oceanic white-tip sharks, are listed as vulnerable or in danger of extinction. The need to understand the significant part sharks play in the oceanic ecosystem has never been so urgent, and Peschak's photographs bear witness to the thrilling strength and unique attraction of sharks. They are certain to enthrall and inspire.
