Das Buch vermittelt das nötige Basiswissen zur eigenständigen Erstellung des Stimulusmaterials. Dabei sind die verschiedenen therapeutischen Vorgehensweisen präzise und leserfreundlich dargestellt, sodass sie schnell und einfach in die praktische Arbeit übertragen werden können. Zum anderen umfasst es eine verständliche, übersichtliche Aufarbeitung zahlreicher Studien zu erprobter störungsspezifischer Behandlung bei verschiedenen aphasischen, dyslektischen und dysgraphischen Störungen und ermöglicht damit die Überprüfung der therapeutischen Qualität. Da

alle therapeutischen Maßnahmen mit Studienergebnissen belegt sind, kann der Effizienz- und Effektivitätsnachweis gegenüber Krankenkassen und Patienten eindeutig belegt werden.

A Global Overview of International Tax Disputes on DTC This book is a unique publication that gives a global overview of international tax disputes in respect of double tax conventions and thereby fills a gap in the area of tax treaty case law. It covers the 32 most important tax treaty cases that were decided around the world in 2019. The systematic structure of each chapter allows for the easy and efficient study and comparison of the various methods adopted for applying and interpreting tax treaties in different cases. With the continuously increasing importance of tax treaties, “Tax Treaty Case Law around the Globe 2020” is a valuable reference tool for anyone interested in tax treaty case law, including tax practitioners, multinational businesses, policymakers, tax administrators, judges and academics

One of the central features in current educational reforms is a focus on learning outcomes. Many countries have established or revised standards to describe what teachers are supposed to teach and students are expected to learn. More recently, the emphasis has shifted to considerations of how standards can be operationalized in order to make the outcomes of educational efforts more tangible. This book is the result of a symposium held in Kiel, that was arranged by two science education groups, one at the IPN (Leibniz-Institute for Science and Mathematics Education at the University of Kiel) in Germany and the other at the University of York, UK. The seminar brought together renowned experts from 12 countries with different notions of the nature and quality of learning outcomes. The aim was to clarify central conceptions and approaches for a better understanding among the international science education community. The book is divided into five parts. In Part A, the organizers set the scene, describing the rationale for

arranging the symposium. Part B provides a broad overview about different approaches, challenges, and pitfalls on the road to the clarification of meaningful and fruitful learning outcomes. The set of papers in Part C provides deep insights into different, although comparable approaches which aim to frame, to assess, and to promote learning and learning outcomes in science education. Smaller projects are presented as well as broad, coordinated national programs. The papers in Part D outline the individual historical development from different national perspectives, reflecting the deficits and problems that led to current reforms. Finally, a summary of the organizers analyses the conclusions from different vantage points.

*Visual and Multimodal Research in Organization and Management Studies* Linde Verlag GmbH

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of “experimental philosophy,” provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

As countries worldwide have become more economically integrated, the importance of international taxes has grown significantly, especially in countries formerly part of the Soviet Union or the Soviet bloc. The authors of this book worked with the OECD in conducting seminars on international tax for tax officials in these countries. In *International Tax Primer*, they address international aspects of income taxation in particular countries, emphasising tax treaties and other cooperative arrangements which help coordinate countries' income tax systems with the tax systems of their trading partners. *International Tax Primer* strikes a balance between the specific and the general by illustrating the fundamental principles and structure of international tax with frequent reference to actual practice in a variety of countries. Coverage includes: the role of the tax adviser, tax planning techniques, international double taxation, anti-avoidance rules, and an overview and analysis of tax treaties. The work also offers such practical features as : an extensive glossary of international tax terms; and a selected bibliography of international tax reference materials, including a list of periodicals devoted to international tax. Students, government officials, and tax practitioners who may be confronting international tax issues for the first time, as well as experienced international tax practitioners, will find *International Tax Primer* a helpful articulation of the fundamental principles that arise again and again in this field. It works as both an introduction and a refresher in an area where issues often prove more complex than they seem and where a return to the basics is often the most helpful means of untangling a multi-layered problem.

## CHILDREN'S UNDERSTANDINGS OF WELL-BEING

Routledge

This book provides new insights into the important field of Entrepreneurship Education. The editors pick up Fayolle's invitation: "How can we learn from 'institutional' culture?" and translate it to a variety of aspects of learning to start-up. From the perspective of Human Resource Education and Management (Wirtschaftspädagogik) the authors shed light into the socio-cultural system of entrepreneurship education. They start with mapping out its challenges. They discuss context factors like political regimes affecting entrepreneurial activities, consider goals including moral awareness, introduce ideas of modeling entre- and intrapreneurial competencies, suggest teaching-learning-strategies, discuss evaluation procedures and introduce case studies of entrepreneurship education in different countries for different study levels. All in all this book stimulates and supports the

challenges of educators, students, and practitioners (human resource managers, consultants, principals, teachers, and trainers) to introduce into the varying contexts of entrepreneurship education content specific, procedural, causal elements necessary for starting and maintaining an enterprise.

*Transport Revolutions: Moving People and Freight without Oil* sets out the challenges to our growing dependence on transport fuelled by low-priced oil. These challenges include an early peak in world oil production and profound climate change resulting in part from oil use. It proposes responses to ensure effective, secure movement of people and goods in ways that make the best use of renewable sources of energy while minimizing environmental impacts. *Transport Revolutions* synthesizes engineering, economics, environment, organization, policy and technology, and draws extensively on current data to present important conclusions. The authors argue that land transport in the first half of the 21st century will feature at least two revolutions. One will involve the use of electric drives rather than internal combustion engines. Another will involve powering many of these drives directly from the electric grid - as trains and trolley buses are powered today - rather than from on-board fuel. They go on to discuss marine transport, whose future is less clear, and aviation, which could see the most dramatic breaks from current practice. With its expert analysis of the politics and business of transport, *Transport Revolutions* is essential reading for professionals and students in transport, energy, town planning and public policy.

The *Routledge Companion to Career Studies* is an in-depth reference for researchers, students, and practitioners looking for a comprehensive overview of the state of the art of career studies. Split into five parts, the volume looks at major areas of research within career studies and reflects on the latest developments in the areas of theory, empirical studies, and methodology. The book's five parts cover (1) major theoretical and methodological debates and approaches to studying careers; (2) careers as dynamic, ongoing processes covering such issues as time, shaping careers, career outcomes and patterns, and the forces shaping careers; (3) the local, national, and global context of careers, (4) implementing career research to design practical interventions in areas such as education, counseling, and national policy; and (5) a commentary on the current state of career scholarship and its future development as represented in this volume, by founding scholars in the field. This book will be a sourcebook for scholars studying careers, research students intending to take up the study of careers, and anyone - scholars and practitioners - with an interest not only in understanding careers, the factors shaping them and where they lead, but also in how this understanding might be used in practice.

*Übungsbuch Rechnungswesen* Elsevier, Urban & Fischer Verlag

The book presented here describes an outstanding attempt, not only to include children's views but to partner with children to develop the concept of well-being and to study the phenomenon as the children understand it. The authors do this by placing the concept of children's well-being within the existing discourses on the topic and by developing their unique theoretical approach to the concept. Then, and based on what children told them, the authors identify different domains and dimensions of children's well-being and touch upon its multifaceted nature. The book concludes with drawing research and policy implications from an integrated summary of the study's findings and lists indicator concepts that present an alternative framework and conceptualisation of well-being from a child standpoint.

'There is no alternative to postmetaphysical thinking': this statement, made by Jürgen Habermas in 1988, has lost none of its relevance.

Postmetaphysical thinking is, in the first place, the historical answer to the crisis of metaphysics following Hegel, when the central metaphysical figures of thought began to totter under the pressure exerted by social developments and by developments within science. As a result, philosophy's epistemological privilege was shaken to its core, its basic concepts were de-transcendentalized, and the primacy of theory over practice was opened to question. For good reasons, philosophy 'lost its extraordinary status', but as a result it also courted new problems. In *Postmetaphysical Thinking II*, the sequel to the 1988 volume that bears the same title (English translation, Polity 1992), Habermas addresses some of these problems. The first section of the book deals with the shift in perspective from metaphysical worldviews to the lifeworld, the unarticulated meanings and assumptions that accompany everyday thought and action in the mode of 'background knowledge'. Habermas analyses the lifeworld as a 'space of reasons' - even where language is not (yet) involved, such as, for example, in gestural communication and rituals. In the second section, the uneasy relationship between religion and postmetaphysical thinking takes centre stage. Habermas picks up where he left off in 1988, when he made the far-sighted observation that 'philosophy, even in its postmetaphysical form, will be able neither to replace nor to repress religion', and explores philosophy's new-found interest in religion, among other topics. The final section includes essays on the role of religion in the political context of a post-secular, liberal society. This volume will be of great interest to students and scholars in philosophy, religion and the social sciences and humanities generally.
