Golding's iconic 1954 novel, now with a new foreword by Lois Lowry, remains one of the greatest books ever written for young adults and an unforgettable classic for readers of any age. This edition includes a new Suggestions for Further Reading by Jennifer Buehler. At the dawn of the next world war, a plane crashes on an uncharted island, stranding a group of schoolboys. At first, with no adult supervision, their freedom is something to celebrate. This far from civilization they can do anything they want. Anything. But as order collapses, as strange howls echo in the night, as terror begins its reign, the hope of adventure seems as far removed from reality as the hope of being rescued.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Health care in the US and elsewhere has been rocked by economic upheaval. Cost-cuts, care-cuts, and confusion abound. Traditional tort and contract law have not kept pace. Physicians are still expected to deliver the same standard of care -- including costly resources - to everyone, regardless whether it is paid for. Health plans can now face litigation for virtually any unfortunate outcome, even those stemming from society's mandate to keep costs down while improving population health. This book cuts through the chaos and offers a clear, persuasive resolution. Part I explains why new economic realities have rendered prevailing malpractice and contract law largely anachronistic. Part II argues that pointing the legal finger of blame blindly or hastily can hinder good medical care. Instead of "whom do we want to hold liable," we should focus first on "who should be doing what, for the best delivery of health care." When things go wrong, each should be liable only for those aspects of care they could and should have controlled. Once a good division of labor is identified, what kind of liability should be imposed depends on what kind of mistake was made. Failures to exercise adequate expertise (knowledge, skill, care effort) should be addressed as torts, while failures to provide promised resources should be resolved under contract. Part III shows that this approach, though novel, fits remarkably well with basic common law doctrines, and can even enlighten ERISA issues. With extensive documentation from current case law, commentary, and empirical literature, the book will also serve as a comprehensive reference for attorneys, law professors, physicians, administrators, bioethicists, and students.

When it comes to your health, God wants you to be selfish. Crazy idea, right? But it's totally true. Far too many of us in church ministry choose to sacrifice our personal health because we're deeply dedicated to our family, our ministry, or other people's needs. But if we don't make our health a priority, no one else will. Veteran youth pastor Matthew McNutt knows what it's like to be "too busy" for a healthy lifestyle—but he also knows the rewards of changing course and practicing this good kind of selfishness. A former contestant on The Biggest Loser, he's ready to help you discover some powerful lessons about spiritual and physical health—and what it all means for those of us called to student ministry. Scripture speaks of our bodies as the holy and sacred dwelling place of God—the temple of the Holy Spirit. That's why a healthy you honors God. Plus, a healthy you benefits your family and close friends. And a healthy you guides teenagers toward a God-honoring perspective on food and exercise. Your ministry will survive if you give time to yourself—in fact, over time it'll be stronger because of it. And you will have modeled something powerful to the people you're leading.
