In July 2010, Facebook had over 500 million subscribers worldwide and the rapid rise of the site prompted *Time* magazine to name Facebook's founder Mark Zuckerberg its person of the year for 2010. This novel book advances our understanding of how democratic citizens are transformed by the “Facebook revolution”. Despite increasing interest in politics and popular media, there has been little academic work on the

impact of Facebook on politics in general, and on democratic processes in particular. The work that does exist has been limited to Facebook's impact on politics as a mobilization tool used by social movement activists. In this book, José Marichal argues that understanding Facebook's impact on political processes requires an understanding of how Facebook's architecture of disclosure shapes the construction of individuals' political identities by drawing users further into their pre-selected social networks. Drawing on a number of disciplines and an ethnographic analysis of 250 Facebook political groups, Marichal explores how

Facebook's emphasis on social connection impacts key dimensions of political participation: e.g., mobilization, deliberation, and attitude formation. *Making a Difference in American Political Life* Routledge
A foundational work on historical and social studies of quantification What accounts for the prestige of quantitative methods? The usual answer is that quantification is desirable in social investigation as a result of its successes in science. Trust in Numbers questions whether such success in the study of stars, molecules, or cells should be an attractive model for research on human societies, and examines why the

natural sciences are highly quantitative in the first place. Theodore Porter argues that a better understanding of the attractions of quantification in business, government, and social research brings a fresh perspective to its role in psychology, physics, and medicine. Quantitative rigor is not inherent in science but arises from political and social pressures, and objectivity derives its impetus from cultural contexts. In a new preface, the author sheds light on the current infatuation with quantitative methods, particularly at the intersection of science and bureaucracy.

Education was decisive in recasting women's subjectivity and the lived reality of their collective experience in post-Revolutionary and antebellum America. Asking how and why women shaped their lives anew through education, Mary Kelley measures the significant transformation in individual and social identities fostered by female academies and seminaries. Constituted in a curriculum that matched the course of study at male colleges, women's liberal learning, Kelley argues, played a key role in one of the most profound changes in gender relations in the nation's history: the

movement of women into public life. By the 1850s, the large majority of women deeply engaged in public life as educators, writers, editors, and reformers had been schooled at female academies and seminaries. Although most women did not enter these professions, many participated in networks of readers, literary societies, or voluntary associations that became the basis for benevolent societies, reform movements, and activism in the antebellum period. Kelley's analysis demonstrates that female academies and seminaries taught women crucial writing, oration, and reasoning skills that prepared them to claim the

rights and obligations of citizenship.

New City Life ORO Applied Research + Design

Over the last 50 years architect Jan Gehl has changed the way that we think about architecture and city planning--moving from the Modernist separation of uses to a human-scale approach inviting people to use their cities. *People Cities* tells the inside story of how Gehl learned to study urban spaces and implement his people-centered approach in car-dominated cities. It

discusses the work, theory, life, and influence of Gehl from the perspective of those who have worked with him in cities across the globe. It will inspire anyone who wants to create vibrant, human-scale cities and understand the ideas and work of the architect who has most influenced urban design.

What does it mean to be modern outside the West? Based on a wealth of primary data collected over five years, Reality Television and Arab Politics analyzes how reality television stirred an explosive mix of religion, politics, and sexuality, fuelling heated polemics over cultural authenticity,

gender relations, and political participation in the Arab world. The controversies, Kraidy argues, are best understood as a social laboratory in which actors experiment with various forms of modernity, continuing a long-standing Arab preoccupation with specifying terms of engagement with Western modernity.

Women and youth take center stage in this process. Against the backdrop of dramatic upheaval in the Middle East, this book challenges the notion of a monolithic 'Arab Street' and offers an original perspective on Arab media, shifting attention away from a narrow focus on al-Jazeera, toward a vibrant media sphere that compels broad popular engagement

and contentious political performance. *"Work Hard, Study . . . and Keep Out of Politics!"* Harvard University Press
In this timely study, Jeffrey C. Goldfarb explores the nature and prospects of cultural freedom by examining the conditions that favor or threaten its development in the political East and West. Goldfarb--who examines conditions in the Soviet Union, the United States, and their respective European allies--focuses most closely upon Poland and the United States. He investigates a wide range of concrete cases, including the Polish opposition movement and Solidarity, the migration of artists, the

American television and magazine industries, American philanthropy, and communist cultural conveyor belts. From these cases, Goldfarb derives a definitive set of sociological conditions for cultural freedom: critical creativity which resists systematic constraints, continuity of cultural tradition, and a relatively autonomous public realm for the reception of culture. Cultural freedom, Goldfarb shows, is not a static state but a process of achievement. Its parameters and content are determined by social practice in cultural institutions and by their relations with other components and the totality of social structure. So defined,

cultural freedom is transformed from an ideological concept into one with real critical and analytical power. Through it we can appreciate the invisible nature of constraint in the West and the unapparent but acting supports of cultural freedom existing in socialist countries. Most importantly, Goldfarb's conclusions provide a framework for understanding more clearly than before the circumstance of cultural freedom in both East and West so that citizens may utilize their full creative abilities as they address the problems of the present day.

The original edition of *Public Journalism and Public Life*, published in 1995, was the first comprehensive argument in favor of public journalism. Designed to focus the discussion about public journalism both within and outside the profession, the book has accomplished its purpose. In the ensuing years, the debate has continued; dozens of newspapers and thousands of journalists have been experimenting with the philosophy, while others still dispute its legitimacy. This larger second edition further develops the philosophy, responds to the arguments against it, outlines how specific principles can be applied, and explains the importance of public

deliberation and the role of values in public journalism. Divided into three sections, it can be used as a supplement to the first edition or as a starting point for those being newly introduced to the ideas that have been the subject of debate within the profession and among those interested and involved in civic life at all levels. Section 1 summarizes two major arguments -- why journalism and public life are inseparably bound in success or failure and why the way journalism operates in the current environment fosters failure more often than success. Section 2 looks at the evolution of the profession's culture, its impact on the author's extensive career, and how he

grew to believe that substantive change is needed in journalism. Section 3 deals with the implications of public journalism philosophy -- how it requires the application of additional values to daily work, its evolution in the early years and where its current focus should be, plus various questions about the future of cyberspace. In searching for answers as to why young people differ vastly from their parents and grandparents when it comes to turning out the vote, A New Engagement challenges the conventional wisdom

that today's youth is plagued by a severe case of political apathy. In order to understand the current nature of citizen engagement, it is critical to separate political from civic engagement. Using the results from an original set of surveys and the authors' own primary research, they conclude that while older citizens participate by voting, young people engage by volunteering and being active in their communities.

How do we accommodate a growing urban population in a way that is sustainable, equitable, and inviting?

This question is becoming increasingly urgent to answer as we face diminishing fossil-fuel resources and the effects of a changing climate while global cities continue to compete to be the most vibrant centers of culture, knowledge, and finance. Jan Gehl has been examining this question since the 1960s, when few urban designers or planners were thinking about designing cities for people. But given the unpredictable, complex and ephemeral nature of life in cities, how can we best design public infrastructure—vital to cities for getting from place to place, or staying in place—for human use? Studying city life and understanding the factors that encourage or discourage use is

the key to designing inviting public space. In *How to Study Public Life* Jan Gehl and Birgitte Svarre draw from their combined experience of over 50 years to provide a history of public-life study as well as methods and tools necessary to recapture city life as an important planning dimension. This type of systematic study began in earnest in the 1960s, when several researchers and journalists on different continents criticized urban planning for having forgotten life in the city. City life studies provide knowledge about human behavior in the built environment in an attempt to put it on an equal footing with knowledge about urban elements such as

buildings and transport systems. Studies can be used as input in the decision-making process, as part of overall planning, or in designing individual projects such as streets, squares or parks. The original goal is still the goal today: to recapture city life as an important planning dimension. Anyone interested in improving city life will find inspiration, tools, and examples in this invaluable guide.

What do the recent urban resistance tactics around the world have in common? What are the roles of public space in these movements? What are the implications of urban resistance for the

remaking of public space in the "age of shrinking democracy"? To what extent do these resistances move from anti- to alter-politics? *City Unsilenced* brings together a cross-disciplinary group of scholars and scholar-activists to examine the spaces, conditions, and processes in which neoliberal practices have profoundly impacted the everyday social, economic, and political life of citizens and communities around the globe. They explore the commonalities and specificities of urban resistance movements that respond to those impacts. They focus on how such movements make use of and transform the meanings and capacity of public space. They

investigate their ramifications in the continued practices of renewing democracies. A broad collection of cases is presented and analyzed, including *Movimento Passe Livre* (Brazil), *Google Bus Blockades San Francisco* (USA), the *Platform for Mortgage Affected People (PAH)* (Spain), the *Piqueteros Movement* (Argentina), *Umbrella Movement* (Hong Kong), *post-Occupy Gezi Park* (Turkey), *Sunflower Movement* (Taiwan), *Occupy Oakland* (USA), *Syntagma Square* (Greece), *Researchers for Fair Policing* (New York), *Urban Movement Congress* (Poland), *urban activism* (Berlin), *1DMX* (Mexico), *Miyashita Park Tokyo* (Japan), *15M Movement* (Spain), and *Train of Hope* and

protests against Academic Ball in Vienna (Austria). By better understanding the processes and implications of the recent urban resistances, *City Unsilenced* contributes to the ongoing debates concerning the role and significance of public space in the practice of lived democracy.

THE POLITICAL LIFE OF URBAN STREETSCAPES

Vintage History, Memory and Public Life introduces readers to key themes in the study of historical memory and its significance by considering the role of historical expertise and understanding in contemporary public reflection on the past. Divided into two parts,

the book addresses both the theoretical and applied aspects of historical memory studies. 'Approaches to history and memory' introduces key methodological and theoretical issues within the field, such as postcolonialism, sites of memory, myths of national origins, and questions raised by memorialisation and museum presentation. 'Difficult pasts' looks at history and memory in practice through a range of case studies on contested, complex or traumatic memories, including the Northern Ireland Troubles, post-apartheid South Africa and the Holocaust. Examining the intersection between history and memory from a wide range of perspectives, and supported by guidance

on further reading and online resources, this book is ideal for students of history as well as those working within the broad interdisciplinary field of memory studies.

This book examines the relationship between media and medicine, considering the fundamental role of news coverage in constructing wider cultural understandings of health and disease. The authors advance the notion of 'biomediatization' and demonstrate how health knowledge is co-produced through connections between dispersed sites and forms of expertise. The chapters offer an

innovative combination of media content analysis and ethnographic data on the production and circulation of health news, drawing on work with journalists, clinicians, health officials, medical researchers, marketers, and audiences. The volume provides students and scholars with unique insight into the significance and complexity of what health news does and how it is created.

At the Apartheid Museum in Johannesburg, South Africa, visitors confront the past upon arrival. They must decide whether to enter the museum through a door marked "whites" or another marked

"non-whites." Inside, along with text, they encounter hanging nooses and other reminders of apartheid-era atrocities. In the United States, museum exhibitions about racial violence and segregation are mostly confined to black history museums, with national history museums sidelining such difficult material. Even the Smithsonian's National Museum of African American History and Culture is dedicated not to violent histories of racial domination but to a more generalized narrative about black identity and culture. The scale at which violent racial pasts have been incorporated into South African national historical narratives is lacking in the U.S.

Desegregating the Past considers why this is the case, tracking the production and display of historical representations of racial pasts at museums in both countries and what it reveals about underlying social anxieties, unsettled emotions, and aspirations surrounding contemporary social fault lines around race. Robyn Autry consults museum archives, conducts interviews with staff, and recounts the public and private battles fought over the creation and content of history museums. Despite vast differences in the development of South African and U.S. society, Autry finds a common set of ideological, political, economic, and

institutional dilemmas arising out of the selective reconstruction of the past. Museums have played a major role in shaping public memory, at times recognizing and at other times blurring the ongoing influence of historical crimes. The narratives museums produce to engage with difficult, violent histories expose present anxieties concerning identity, (mis)recognition, and ongoing conflict.

For more than forty years Jan Gehl has helped to transform urban environments around the world based on his research into the ways people

actually use—or could use—the spaces where they live and work. In this revolutionary book, Gehl presents his latest work creating (or recreating) cityscapes on a human scale. He clearly explains the methods and tools he uses to reconfigure unworkable cityscapes into the landscapes he believes they should be: cities for people. Taking into account changing demographics and changing lifestyles, Gehl emphasizes four human issues that he sees as essential to successful city planning. He explains how to develop cities that are Lively, Safe, Sustainable, and Healthy. Focusing on these issues leads Gehl to think of even the largest city on a very small scale. For Gehl,

the urban landscape must be considered through the five human senses and experienced at the speed of walking rather than at the speed of riding in a car or bus or train. This small-scale view, he argues, is too frequently neglected in contemporary projects. In a final chapter, Gehl makes a plea for city planning on a human scale in the fast-growing cities of developing countries. A "Toolbox," presenting key principles, overviews of methods, and keyword lists, concludes the book. The book is extensively illustrated with over 700 photos and drawings of examples from Gehl's work around the globe.

European cities are changing rapidly in part due to the process of de-industrialization, European integration

and economic globalization. Within those cities public spaces are the meeting place of politics and culture, social and individual territories, instrumental and expressive concerns. *Public Space and the Challenges of Urban Transformation in Europe* investigates how European city authorities understand and deal with their public spaces, how this interacts with market forces, social norms and cultural expectations, whether and how this relates to the needs and experiences of their citizens, exploring new strategies and innovative practices for strengthening public spaces and urban culture. These questions are explored

by looking at 13 case studies from across Europe, written by active scholars in the area of public space and organized in three parts: strategies, plans and policies multiple roles of public space and everyday life in the city. This book is essential reading for students and scholars interested in the design and development of public space. The European case studies provide interesting examples and comparisons of how cities deal with their public space and issues of space and society.
