 Starting Something Big  
 The Commercial Emergence of GE Aircraft Engines  
 AIAA  
*Export-import Bank Authorization and Related Issues* AIAA  
 Examines the 1984 "war" that pitted Pratt and Whitney against GE in head-to-head competition for multi billion dollar defense contracts to

provide high performance engines for front line fighter aircraft. The circumstances surrounding the lengthy battle led to the Air Force decision to split future engine sales between the two. Attempts to cut through emotional opinions of the "combatants," to report reality, and to identify lessons learned. Helps the reader to understand the government-to-contractor personality issues; to understand management styles, business expectations and

communication skills of key participants.

 Opportunities and Projects  
**Globalization of  
 Services** Routledge  
 The third in a series of  
 sector-specific  
 assessments of U.S.-Japan  
 technology linkages, this  
 book examines U.S.-Japan  
 relationships that develop  
 or transfer aircraft  
 technology, the  
 motivations of  
 participating  
 organizations, and the

impacts on U.S. and  
 Japanese capabilities.  
 Incorporating detailed  
 accounts of the business  
 and technology aspects of  
 U.S.-Japan aircraft  
 alliances, the volume also  
 describes the U.S. and  
 Japanese policy contexts,  
 presents alternative  
 scenarios for the future  
 and outlines how linkages  
 with Japan can be  
 leveraged as part of a  
 strategy to reenergize  
 U.S. leadership in this  
 critical industry.

 Aircraft Financing and  
 Leasing: Tools for Success  
 in Aircraft Acquisition and  
 Management provides  
 researchers, industry  
 professionals and  
 students with a thorough  
 overview of the skills  
 necessary for navigating  
 this dynamic field. The  
 book details the industry's  
 foundational concepts,

including aviation law and regulation, airline credit analysis, maintenance reserves, insurance, transaction cost modeling, risk management tools, such as fuel hedging, and the art of lease negotiations. Different types of aircraft are explored, highlighting their purposes, as well as when and why airline operators choose specific models over others. In addition, the book also covers important factors, such as maintenance reserve development, modeling financial returns

for leased aircraft, and appraising aircraft values. Most chapters feature detailed case studies, applying concepts to actual industry circumstances. Users will find this an ideal resource for practitioners or as an outstanding reference for senior undergraduate and graduate students. Presents the foundations of aircraft leasing and financing, including aviation law and regulation, airline credit analysis, maintenance reserves, insurance, transaction cost modeling,

and more Provides an overview of the different types of aircraft, their purposes, and when and why operators choose specific models over others Offers a blend of academic and professional views, making it suitable for both student and practitioner Serves as an aircraft finance and leasing reference for those starting their careers, as well as for legal, investment, and other professionals

"Brian H. Rowe took General Electric to world market leadership in commercial engines. A brilliant engineer, a sound businessman, and a popular leader, Rowe established relationships of trust with Boeing, Douglas, and Airbus and most most importantly, the world's airlines. He also worked effectively with the French industry and government." --book jacket.

It is the end of the Cold War. Defense markets begin to dwindle as the global community emerges into the new era of perestroika. Military engine manufacturers brace for the impact, and

in a surge of survival instinct and shrewd business sense, one makes the transition into the commercial engine market and eventually surpasses the rest. Witness as GE Aircraft Engines moves from military markets to commercial ventures through the eyes of a 40-year company veteran. Robert Garvins enlightening history details the political and external forces affecting the engine industry and how GE avoided some of the problems posed by

environmental politics. Much more than a memoir, "Starting Something Big" tracks GEs progress from the early 1950s to its present-day dominance in the global market. Interview accounts and anecdotes add personal flair to Garvins analysis of the long-term economic characteristics of the aircraft engine industry, including GEs contract with the U.S. Department of Commerce to help Russian aerospace engineers adapt and survive in civil markets.

Youll learn, through Garvins experience, how to gain an edge in finding money for new programs, staying competitive in the production of commercial aircraft engines, and positioning your financial investors and start something big of your own.
