GARDNER JILLIAN

Earth Ballantine Books

10 years on from the first, groundbreaking, Planet Earth, we use the most incredible advances in technology and scientific discovery to bring you the most exciting and immersive picture of our world's wildlife yet. With over 250 breathtaking photographs and stills from the BBC Natural History Unit's spectacular footage, this is an extraordinary new look at the complex life of some of the most amazing places on Planet Earth. Each chapter reveals an environment – some never-before-seen, some astonishingly familiar – defined by a unique set of rules required for survival. From the most desolate desert to the depths of the jungle, from blistering heat and freezing cold to perpetual darkness and deadly UV, discover how a whole host of creatures have adapted to life in the most extreme conditions. And how they compete with one another to become the largest, the fastest, the most poisonous, or most devious – all in a bid to survive. Planet Earth II includes the first in-depth look at the urban environment, and the surprising range of behaviours occurring right under our noses, as well as some previously untouched island worlds. Filmed with remarkable 5k and infra-red technology, these are the challenges, the confrontations, and the triumphs of some of the most extraordinary creatures in the natural world, told from their perspective. This is our planet, as you have never seen it before.

Earth: Portrait of a Planet Art Notebook Earth: Portrait of a Planet

Move to another planet? Sounds interesting! In our imaginary spaceship, let's check out the planets in our solar system. Mercury is closest, but it has no air, and it's either sizzling hot or bitterly cold. The atmosphere on Venus is poisonous; plus, human beings would cook there. Mars might work, but you'd always have to be in a protective shelter. And if you got to the outer planets, you couldn't even land as they are mostly made of gas! Our home planet is looking good. Why is Earth so comfortable for plants, animals, and people? As Robert E. Wells explains, it's because of

our just-right position from the sun, marvelous atmosphere, and abundant water. Our planet is very special and perfect for us, and that's why we must do all we can to keep Earth healthy.

Livre du pain et du vin, de leau, de lhuile et du baume Second Story Press

This new stand-alone edition of Geotours Workbook contains nineteen active-learning tours that take students on virtual field trips to see outstanding examples of geology around the world.

A Planet for Rent Springer Nature

The Student Lecture Art Notebook to accompany Earth: Portrait of a Planet is the perfect complement to the outstanding art program. This powerful learning tool contains all of the major diagrams from the text in full 4-color, with the ample room for taking notes.

Hello, Is This Planet Earth? Activity Book

The Sunday Times Bestseller A new, fully updated narrative edition of David Attenborough's seminal biography of our world, The Living Planet. Nowhere on our planet is devoid of life. Plants and animals thrive or survive within every extreme of climate and habitat that it offers. Single species, and often whole communities adapt to make the most of ice cap and tundra, forest and plain, desert, ocean and volcano. These adaptations can be truly extraordinary: fish that walk or lay eggs on leaves in mid-air; snakes that fly; flightless birds that graze like deer; and bears that grow hair on the soles of their feet. In The Living Planet, David Attenborough's searching eye, unfailing curiosity and infectious enthusiasm explain and illuminate the intricate lives of the these colonies, from the lonely heights of the Himalayas to the wild creatures that have established themselves in the most recent of environments, the city. By the end of this book it is difficult to say which is the more astonishing – the ingenuity with which individual species contrive a living, or the complexity of their interdependence on each other and on the habitations provided by our planet.

In this new edition, the author, with the help of zoologist Matthew Cobb, has added all the most up-to-date discoveries of ecology and biology, as well as a full-colour 64-page photography section. He also addresses the urgent issues facing our living planet: climate change, pollution and mass extinction of species.

Earth Dark Horse Comics

Earth is, to our knowledge, the only life-bearing body in the Solar System. This extraordinary characteristic dates back almost 4 billion years. How to explain that Earth is teeming with organisms and that this has lasted for so long? What makes Earth different from its sister planets Mars and Venus? The habitability of a planet is its capacity to allow the emergence of organisms. What astronomical and geological conditions concurred to make Earth habitable 4 billion years ago, and how has it remained habitable since? What have been the respective roles of non-biological and biological characteristics in maintaining the habitability of Earth? This unique book answers the above questions by considering the roles of organisms and ecosystems in the Earth System, which is made of the non-living and living components of the planet. Organisms have progressively occupied all the habitats of the planet, diversifying into countless life forms and developing enormous biomasses over the past 3.6 billion years. In this way, organisms and ecosystems "took over" the Earth System, and thus became major agents in its regulation and global evolution. There was co-evolution of the different components of the Earth System, leading to a number of feedback mechanisms that regulated long-term Earth conditions. For millennia, and especially since the Industrial Revolution nearly 300 years ago, humans have gradually transformed the Earth System. Technological developments combined with the large increase in human population have led, in recent decades, to major changes in the Earth's climate, soils, biodiversity and quality of air and water. After some successes in the 20th century at preventing internationally environmental disasters, human societies are now facing major challenges arising from climate change. Some of these challenges are short-term and others concern the thousand-year evolution of the Earth's climate. Humans should become the stewards of Earth.

How Come? HarperCollins UK

Fascinating activity book for children to explore the wonders of our planet. The puzzles and activities in this book will take you to the furthest corners of the Earth. You'll spot wildlife in the Amazon Rainforest and find a wonderful array of corals in the Great Barrier Reef to colour in. You'll discover the highest mountains on all the world's continents and identify volcanoes around the Pacific Ocean in the Ring of Fire. And when you come to reunite a herd of elephants on the African savanna, you'll learn why these amazing creatures are rather like gardeners.

TIME PLANET EARTH

W. W. Norton

This is the story of a single pebble. It is just a normal pebble, as you might pick up on holiday - on a beach in Wales, say. Its history, though, carries us into abyssal depths of time, and across the farthest reaches of space. This is a narrative of the Earth's long and dramatic history, as gleaned from a single pebble. It begins as the pebble-particles form amid unimaginable violence in distal realms of the Universe, in the Big Bang and in supernova explosions and continues amid the construction of the Solar System. Jan Zalasiewicz shows the almost incredible complexity present in such a small and apparently mundane object. Many events in the Earth's ancient past can be deciphered from a pebble: volcanic eruptions; the lives and deaths of extinct animals and plants; the alien nature of long-vanished oceans; and transformations deep underground, including the creations of fool's gold and of oil. Zalasiewicz demonstrates how geologists reach deep into the Earth's past by forensic analysis of even the tiniest amounts of mineral matter. Many stories are crammed into each and every pebble around us. It may be small, and ordinary, this pebble - but it is also an eloquent part of our Earth's extraordinary, never-ending story.

Why Earth's life-friendly climate makes it exceptional—and what that means for the likelihood of finding intelligent extraterrestrial life We have long fantasized about finding life on planets other than our own. Yet even as we become aware of the vast expanses beyond our solar system, it remains clear that Earth is exceptional. The question is: why? In *Lucky Planet*, astrobiologist David Waltham argues that Earth's climate stability is what makes it uniquely able to support life, and it is nothing short of luck that made such conditions possible. The four billion year-stretch of good weather that our planet has experienced is statistically so unlikely that chances are slim that we will ever encounter intelligent extraterrestrial others. Citing the factors that typically control a planet's average temperature—including the size of its moon, as well as the rate of the Universe's expansion—Waltham challenges the prevailing scientific consensus that Earth-like planets have natural stabilizing mechanisms that allow life to flourish. A lively exploration of the stars above and the ground beneath our feet, *Lucky Planet* seamlessly weaves the story of Earth and the worlds orbiting other stars to give us a new perspective of the surprising role chance plays in our place in the universe.

Earth 2e IM/TIF PA W. W. Norton

Worksheets accompany each chapter's Geotour--23 in all--and can be assigned as homework assignments and lab activities.

Earth: Portrait of a Planet W. W. Norton & Company

"Fascinating . . . memorable . . . revealing . . . perhaps the best of Carl Sagan's books."—The

Washington Post Book World (front page review) In *Cosmos*, the late astronomer Carl Sagan cast his gaze over the magnificent mystery of the Universe and made it accessible to millions of people around the world. Now in this stunning sequel, Carl Sagan completes his revolutionary journey through space and time. Future generations will look back on our epoch as the time when the human race finally broke into a radically new frontier—space. In *Pale Blue Dot*, Sagan traces the spellbinding history of our launch into the cosmos and assesses the future that looms before us as we move out into our own solar system and on to distant galaxies beyond. The exploration and eventual settlement of other worlds is neither a fantasy nor luxury, insists Sagan, but rather a necessary condition for the survival of the human race. "Takes readers far beyond *Cosmos* . . . Sagan sees humanity's future in the stars."—Chicago Tribune

Living Planet Crown

The #1 international bestseller: An astronaut's tour of our planet from the heavens, featuring 150 mesmerizing photographs (with commentary) from the International Space Station. During his six-month mission to the International Space Station, astronaut Tim Peake became the first British astronaut to complete a spacewalk -- and, perhaps more astonishingly, the first to run an entire marathon in space. During his historic mission, he captured hundreds of dazzling photographs, the very best of which are collected here. Tim captures the majesty of the cosmos and of the planet we call home: breath-taking aerial photos of the world's cities illuminated at night, the natural beauty of the northern lights, and unforgettable views of oceans, mountains, and deserts. Tim's lively stories about life in space appear alongside these photographs, including the tale from which the title is taken: his famous wrong number dialed from space, when he accidentally called a stranger and asked: "Hello, is this planet Earth?" With this truly unique perspective on the incredible sights of our planet, Tim demonstrates that while in space, hundreds of miles above his friends and family, he never felt closer to home.

Macmillan

Since 1960, there have been two major theoretical advances in the Earth sciences: the theory of plate tectonics and the advent of Earth systems science. Stephen Marshak's beautifully written and illustrated new text is the first to incorporate both of these discoveries from its inception. *Earth: Portrait of a Planet* covers all the topics of a traditional physical geology course, but also includes such topics as historical geology, environmental geology, the Earth's resources, the oceans and atmosphere, cosmology, and global change. What results is a fascinating, comprehensive ?portrait? of planet Earth.

The Ultimate Book of Planet Earth Cram101

Ten profiles of amazing young environmental activists. Each child is captured in a portrait, their achievements described, and filled out with photos. Ends with tips for kids to make a difference.

THE LIFE AND DEATH OF PLANET EARTH

Albert Whitman & Company

Planet Earth is middle-aged. Science has worked hard to piece together the story of the evolution of our world up to this point, but only recently have we developed the understanding and the tools to describe the entire life cycle of a planet. Ward and Brownlee, a geologist and an astronomer respectively, combine their knowledge of how the critical sustaining systems of our planet evolve through time with their understanding of the life cycles of stars and solar systems, to tell the story of the second half of Earth's life. The process of evolution will essentially reverse itself: life as we know it will subside until only the simplest forms remain. Eventually, they too will disappear. The

oceans will evaporate, the atmosphere will degrade, and, as the sun slowly expands, Earth itself will eventually meet a fiery end. --From publisher description.

Earth Knopf Canada

The internationally successful Ultimate Book series expands its scope to embrace—very appropriately—the whole world! The Ultimate Book of Planet Earth offers lots of opportunity for hands-on interaction using flaps, pop-ups, and more! Pull a tab to see how magma erupts from a volcano, turn a page for a pop-up of a mountain range, or rotate a wheel to move the blades of a wind turbine! Planet Earth explores not only the geology of the Earth—oceans, continents, and the formation of mountains and volcanoes—but also its geo graphy, atmosphere, and weather. A valuable reference book for any child!

Geotours Workbook Quercus Books

Answers to approximately 135 of kids' science questions about people, animals, and the natural world, such as why cats purr and why our fingers wrinkle in water.

PLANET EARTH II

Cram101

This new edition will only enhance its success. It has been thoroughly revised to ensure current coverage of all major topics, especially earthquakes (including the disaster in Haiti in 2010), volcanoes, and climate change. The drawn art represents the state of the art and is both pedagogically innovative and a feast for the eyes. The Google Earth exercises provide virtual field trips to the entire world.

Lucky Planet Basic Books

The most successful and controversial Cuban Science Fiction writer of all time, Yoss (aka José Miguel Sánchez Gómez) is known for his acerbic portraits of the island under Communism. In his bestselling *A Planet for Rent*, Yoss pays homage to Ray Bradbury's *The Martian Chronicles* and 334 by Thomas M. Disch. A critique of Cuba in the nineties, after the fall of the Soviet Union and the dissolution of the Warsaw Pact, *A Planet for Rent* marks the debut in English of an astonishingly brave and imaginative Latin American voice. Praise for Yoss "One of the most prestigious science fiction authors of the island." —On Cuba Magazine "A gifted and daring writer." —David Iaconangelo "José Miguel Sánchez [Yoss] is Cuba's most decorated science fiction author, who has cultivated the most prestige for this genre in the mainstream, and the only person of all the Island's residents who lives by his pen." —Cuenta Regresiva Born José Miguel Sánchez Gómez, Yoss assumed his pen name in 1988, when he won the Premio David Award in the science fiction category for *Timshel*. Together with his peculiar pseudonym, the author's aesthetic of an impetuous rocker has allowed him to stand out amongst his fellow Cuban writers. Earning a degree in Biology in 1991, he went on to graduate from the first ever course on Narrative Techniques at the Onelio Jorge Cardoso Center of Literary Training, in the year 1999. Today, Yoss writes both realistic and science fiction works. Alongside these novels, the author produces essays, Praise for, and compilations, and actively promotes the Cuban science fiction literary workshops, *Espiral* and *Espacio Abierto*. When he isn't translating, David Frye teaches Latin American culture and society at the University of Michigan. Translations include *First New Chronicle* and *Good Government* by Guaman Poma de Ayala (Peru, 1615); *The Mangy Parrot* by José Joaquín Fernández de Lizardi (Mexico, 1816), for which he received a National Endowment for the Arts Fellowship; *Writing across Cultures: Narrative Transculturation in Latin America* by Ángel Rama (Uruguay, 1982), and several Cuban and Spanish novels and poems.
