Minority Serving Institutions (MSIs)—specifically Historically Black Colleges and Universities (HBCUs), Tribal Colleges and Universities (TCUs), Hispanic-Serving Institutions (HSIs), and Asian American and Native American Pacific Islander-Serving Institutions (AANAPISIs)—have carved out a unique niche in the nation, serving the needs of low-income, underrepresented students of color. Covering foundational topics relating to MSIs, chapter authors explore how salient issues across the landscape of higher education play out within the MSI context. Undergirded by national data and key literature, *A Primer on Minority Serving Institutions* provides graduate students, scholars, and researchers a full picture of the work and contributions of MSIs and urges them to think about MSIs as part of the larger higher education landscape.

Also known as [free tuition] and [free college] programs, college promise programs are an emerging approach for increasing higher education attainment of people in particular places. To maximize the effectiveness of their efforts and investments, program leaders and policymakers need research-based evidence to inform program design, implementation, and evaluation. With the goal of addressing this knowledge need, this volume presents a collection of research studies that examine several categories and variations of college promise programs. These theoretically grounded empirical investigations use varied data sources and analytic techniques to examine the effects of college promise programs that have different design features and operate in different places. Individually and collectively, the results of these studies have implications for the design and implementation of promise programs if these programs are to create meaningful improvements in attainment for people from underserved groups. The authors’ efforts also provide a useful foundation for the next generation of college promise research.

In Finance, Investment and Macroeconomics, Myron J. Gordon advances a theory of finance and investment under uncertainty and risk aversion which resolves problems left unsolved by Keynes in a manner consistent with his work. Keynes established that both the short-run and long-run performance of a capitalist system depend upon investment, but he failed to arrive at an alternative to the neoclassical theory of investment. Professor Gordon demonstrates that the extension of neoclassical theory to deal with uncertainty and risk aversion is based upon a string of assumptions which are empirically false. The competitive stationary state, the foundation for the neoclassical theory of a capitalist system, is shown to be unfeasible because it results in a very high probability of bankruptcy at the micro level and the system's early collapse on the macro level. Capitalists seeking long term survival are shown to be subject to a growth imperative, to the pursuit of monopoly power, and to a concern for financial policy. Later sections of the book discuss the consequences of this behaviour for short-run fluctuations and the long-run development of capitalist systems. This innovative book advances an important new theory of finance and investment which recognizes the problem of bankruptcy when the future is uncertain. It will be welcomed by both post Keynesian and neoclassical economists as a significant contribution to current economic understanding.
