GUIDANCE FOR A STANDARDS-BASED REVIEW OF COUNTRY PRACTICES

World Health Organization
Now fully revised and updated, with the most up-to-date guidelines, references and resources, this new edition of the bestselling Oxford Handbook of Midwifery provides a concise and logical approach to midwifery practice in all its varied settings. With practical and expert advice, this handbook is the definitive guide on all

aspects of midwifery practice. The handbook gives a complete picture from pre-conceptual advice to the final postnatal examination of mother and baby. The fundamentals of midwifery are divided into seven main sections, covering antenatal care; normal labour and birth; complicated labour and birth; postnatal care; family planning; care of the newborn; and infant feeding. The handbook also gives information rarely covered in standard midwifery texts, including sexual health, complementary therapies, common blood values, investigations, and midwifery emergencies. Key interventions are laid out as algorithms to aid quick assimilation

of the crucial facts. With a wealth of references, recommendations, and guidance from the authors' many years of experience this handbook will help practitioners and students achieve the best possible results for their patients. Presented in concise and easily readable style, the book is clearly laid out with clear headings, and key facts in bullet points. Pocket-sized, with sturdy plastic covers, the Oxford Handbook of Midwifery is a unique and invaluable companion for students, practising midwives, educators, and anyone who needs to understand the challenging and rewarding work of midwifery. understand the challenging and rewarding work of midwifery.

Nursing Care of Children World Health Organization

This publication is one of a series of practical field guides produced by the Pan American Health Organization with best practice guidance for immunisation programmes in the region. This guide describes the strategies that have made the elimination of neonatal tetanus in the Americas possible, highlighting the progress made in surveillance to identify and monitor high-risk areas as well as immunisation activities geared towards women of childbearing age who live in those areas. Sections cover: epidemiology, clinical aspects, case definitions and investigations, surveillance, data analysis, control in high risk areas, programme monitoring, vaccine storage and supply.

Guidelines on Optimal Feeding of Low Birth Weight Infants in Low- And Middle-Income Countries Lippincott Williams & Wilkins

Evidence based practice is now widely accepted as a fundamental tenet of midwifery. The importance of evidence in defining midwifery policy and practice in the UK health system, and others, is acknowledged and enduring. While the

development and evaluation of research in midwifery is well charted, the question of how such evidence is incorporated into practice has, to date, received less attention and discussion in the midwifery profession. Answering this need, Evidence Based Midwifery focuses on the dissemination and use of evidence for midwifery practice, and explores midwives' experiences in using the evidence base to inform policy and enhance clinical practice. Written by a highly-regarded and diverse group from the UK and international midwifery community, Evidence Based Midwifery addresses issues of relevance to all midwives whether clinical practitioners or educators, students or supervisors, researchers or managers. Issues that influence evidence based midwifery are discussed, and topics covered include problem based learning, implementation of evidence based guidelines and the involvement of service users. Edited by founder members of the Evidence Based Midwifery Network International collaboration with contributions from the UK, Greece, Canada and the Netherlands Primary focus on the incorporation of

evidence into midwifery practice Real-life examples throughout

KLAUS AND FANAROFF'S CARE OF THE HIGH-RISK NEONATE E-BOOK

Demos Medical Publishing

Kegawatdaruratan adalah kejadian yang tidak diduga atau terjadi secara tiba-tiba, seringkali merupakan kejadian yang berbahaya (Dorlan, 2011).

Kegawatdaruratan dapat juga didefinisikan sebagai situasi serius dan kadang kala berbahaya yang terjadi secara tiba-tiba dan tidak terduga dan membutuhkan tindakan segera guna menyelamatkan jiwa/ nyawa (Campbell, 2000). Sedangkan kegawatdaruratan obstetri adalah kondisi Kesehatan yang mengancam jiwa yang terjadi dalam kehamilan atau selama dan sesudah persalinan dan kelahiran.

Terdapat sekian banyak penyakit dan gangguan dalam kehamilan yang mengancam keselamatan ibu dan bayinya. Kasus gawat darurat obstetri adalah kasus obstetri yang apabila tidak segera ditangani akan berakibat kematian ibu dan janinnya. Kasus ini menjadi penyebab utama kematian ibu janin dan bayi baru lahir (Saifuddin, 2002). Masalah

keawatdaruratan selama kehamilan dapat disebabkan oleh komplikasi kehamilan spesifik atau penyakit medis atau bedah yang timbul secara bersamaan.

Pediatric Ophthalmology and Strabismus

John Wiley & Sons

Neonatal seizures represent one of the most frequent neurological events in newborn infants, often reflecting a variety of different pre-, peri-, or postnatal disorders of the central nervous system (CNS). They are also a common manifestation of metabolic abnormality in newborn period and often represent the first sign of neurological dysfunction in neonates. They may be symptomatic or cryptogenic, herald subsequent epilepsy, can be associated with potential morbidity and mortality, and may be used as a factor in considering long-term prognosis.

Despite the enormous clinical significance of these events, many aspects of their management are not well supported with evidence-based recommendations. These guidelines are intended to be of use for neonatologists, paediatric neurologists, paediatricians, general practitioners, nurse practitioners, nurses and other health

professionals who may be in contact with infants experiencing seizures within the first 28 days of life (age up to 44 weeks postconception). The guidelines are framed so as to be applied by health care providers practicing in a wide range of health care facilities, from those with limited resources to tertiary care centers.

Neonatal Encephalopathy and Neurologic Outcome Pan American Health Org

Now in its thoroughly revised, updated Seventh Edition, this Spiral® Manual provides practical, easily accessible information on management of the pregnant patient. Major sections cover obstetric care, obstetric complications, maternal complications, fetal assessment, fetal complications, and neonatal care. This edition's chapters have a new consistent outline structure, more tables, and more figures. Coverage includes a new chapter on obstetric anesthesia and new information on drugs for cardiovascular, neurologic, and endocrine conditions, including oral agents for gestational diabetes. The chapter on genetic counseling has been completely rewritten. This edition also addresses

controversies regarding surgical births and vaginal birth after cesarean (VBAC).

Volume I European Alliance for Innovation In 2015 the Millennium Development Goals (MDGs) come to the end of their term, and a post-2015 agenda, comprising 17 Sustainable Development Goals (SDGs), takes their place. This WHO report looks back 15 years at the trends and positive forces during the MDG era and assesses the main challenges that will affect health in the coming 15 years. "Snapshots" on 34 different health topics outline trends, achievements made, reasons for success, challenges and strategic priorities for improving health in the different areas.--

IMPROVING THE QUALITY AND USE OF BIRTH, DEATH AND CAUSE-OF-DEATH INFORMATION

Springer Science & Business Media

This title provides a guide to the diseases, developmental disorders and emotional problems of early childhood. Each chapter contains concise advice on the child health problems most frequently encountered by primary health care workers.

Volume II Rena Cipta Mandiri

Completely revised, the second edition of *Key Topics in Neonatology* provides a practical, systematic reference for all the major topics in neonatal medicine. Practical and easy to use, the book retains the same well-received format as the first edition, updates subject matter where significant recent developments have taken place, and widens the scope of the text by adding entirely new coverage. Distilling this large body of information into compact yet clear topics, the authors provide succinct reviews of issues that are often skimmed over in similar sized texts. This is the resource you will want on hand to solve the complex issues you face on a daily basis. New topics include: Abdominal Wall Defects Breast Feeding Cerebral Palsy Hearing Screening Hepatitis C Metabolic Acidosis Outcomes of Neonatal Intensive Care Updated topics include: Childbirth Complications and Fetal Outcome Chromosomal Abnormalities Chronic Lung Disease Complications of Mechanical Ventilation Congenital Malformations and Birth Defects Death of a Baby Extreme Prematurity Hepatitis B HIV/AIDS Immunisation Infants of Diabetic Mothers Jaundice Liver Disorders Maternal Drug

Concise and easy to read, this popular manual has provided a practical approach to the diagnosis and medical management of problems in the newborn through seven outstanding editions. The Eighth Edition of Cloherty and Stark's *Manual of Neonatal Care* maintains that tradition of excellence, offering NICU physicians, neonatal-perinatal fellows, residents, and neonatal nurse practitioners quick access to key clinical information, fully updated to reflect recent advances in the field. Written in an easy-access outline format, this extensively revised edition covers current, practical approaches to the evaluation and management of routine and complex conditions encountered in the fetus and the newborn.

Cloherty and Stark's Manual of Neonatal Care John Wiley & Sons

The needs of critically ill children are unique and highly specialized. Paediatric

Intensive Care Nursing is an essential manual of care and an invaluable resource to all those involved in the care of critically ill children and young people. Covering all the key aspects of paediatric intensive care, it is a fully comprehensive textbook which provides an evidence-based and up-to-date guide for all nurses who work with critically ill children. Paediatric Intensive Care Nursing is divided into four user-friendly sections: The first section looks at the general background of paediatric intensive care Section two employs a systems approach, with each chapter focusing on a specific disease and following the same framework. This includes treating children with cardiac conditions, acute neurological dysfunction, musculoskeletal injuries and gastrointestinal and endocrine conditions Section three looks at the essential care of managing pain relief, transportation needs and treating wounds The final section explores the holistic aspects of nursing - nutrition and fluid management, infection control issues, safeguarding children and spirituality and bereavement Written by a team of experts in the field, Paediatric Intensive Care Nursing is indispensable

reading for nurses and health care professionals working with critically ill children.

Neonatal Pain McGraw-Hill Education / Medical

Every year throughout the world, about four million babies die before they reach one month old, most during the critical first week of life. Most of these deaths are a result of the poor health and nutritional status of the mother, combined with problems such as tetanus or asphyxia, trauma, low birth weight, or preterm birth. However, many of the conditions which result in perinatal death are preventable or treatable without the need for expensive technology. Against this background, this publication contains guidance on evidence-based standards for high quality care provision during the newborn period, considering the needs of mother and baby. It has been produced to assist countries with limited resources to reduce neonatal mortality. The information is arranged under four main headings: clinical assessment, findings and management; principles of newborn baby care; procedures; record keeping and essential equipment, supplies and drugs.

Assisted Ventilation of the Neonate

John Wiley & Sons

Trusted by neonatologists for more than 40 years, Klaus and Fanaroff's *Care of the High-Risk Neonate* provides unique, authoritative coverage of technological and medical advances in this challenging field, and includes personal and practical editorial comments that are the hallmark of this renowned text. The 7th Edition helps you take advantage of recent advances in the NICU that have improved patient care, outcomes, and quality of life, with new coverage of genetics and imaging, new cases and commentary throughout, new contributors, and much more. Covers all aspects of high-risk neonatal care, including resuscitation, transport, nutrition, respiratory problems and assisted ventilation, and organ-specific care. Includes two new chapters: Genetics, Inborn Errors of Metabolism, and Newborn Screening; and Neonatal Imaging. Features new case studies, new editorial comments that provide pearls and red herrings, and question-and-answer sections at the end of each chapter. These popular features set this book apart from other NICU-related titles.

Uses a new two-color format for readability and quick reference. Contains updated content throughout; easy-to-follow clinical workflow algorithms; numerous tables and illustrations; useful appendices with drug information, normal values, and conversion charts.

MANAGING NEWBORN PROBLEMS

Lippincott Williams & Wilkins

Pathology of Multiple Pregnancy collates case material from over 500 autopsies (including embryos) and 1200 placentas from twins, triplets, and higher multiples with selected literature on human multiple reproduction. It emphasizes important new concepts of pathophysiology and interpretation of less than ideal outcomes of multiple conception based on over 30 years experience in the field. Aspects of perinatal pathology unique to twins and higher multiples are emphasized, with practical suggestions for the service pathologist, including items of potential medico-legal significance. Controversial topics, such as the value of studies of concordance for diseases or malformations, and the significance of inter-twin anastomoses, are addressed

and suggestions made for further investigation. A close working relationship between pathologists and clinical colleagues is encouraged by discussion of clinico-pathological correlations. And, the most recent discussions on mechanisms of twinning and genetic versus environmental influences on the development of twins are presented.

A Guide for Doctors, Nurses, and Midwives
American College of Obstetricians and Gynecologists Women's Health Care Physicians

"Pediatric Neurocritical Care is by far the most comprehensive book I have read dealing with this topic... This text will provide an excellent reference for those interested in the pediatric intensive care cases or pediatrics in general. It is written very well and is chock-full of information that Practitioners in a pediatric ICU setting would use." --Donna Jacobs, R. EEG T., CNIM, The Neurodiagnostic Journal Caring for children with neurocritical illness often requires multi-specialty collaboration and the understanding of an ever-expanding body of data. This book gives clinicians the up-to-date, concise, and clinically relevant guidance they need to provide optimal

care to children with these acute neurologic disorders. The chapters in Pediatric Neurocritical Care are authored by experts in each individual topic, and co-edited by a neurologist and intensivist to ensure that all topics have been fully addressed from both perspectives. The book covers the complete continuum of care from assessment, monitoring, and condition specific management through rehabilitation. Early chapters present differential diagnosis and management approaches to common overarching problems such as coma, headache, and elevated intracranial pressure, followed by chapters focusing on the evaluation and management of specific conditions including traumatic brain injury, stroke, seizures, central nervous system infections, and demyelinating disorders. The final chapters address important associated psychological, social, and ethical issues. To reflect the full spectrum of specialties involved in the burgeoning field of pediatric neurocritical care, the book brings together an international group of experts from multiple disciplines including critical care medicine, anesthesiology, neurology, neurosurgery,

rehabilitation medicine, psychology, and pediatric subspecialties. Pediatric Neurocritical Care features: Every topic is addressed from a neurologic and critical care perspective. Comprehensive coverage includes the evaluation of common overarching problems and management of specific conditions, in addition to discussion of related psychological, ethical, and social issues. Chapters are written by internationally known experts from the fields of critical care medicine, anesthesiology, neurology, neurosurgery, rehabilitation medicine, and many affiliated specialties.

NCOV 2020

Amer College of Obstetricians & The Department of Child and Adolescent Health has developed guidelines on optimal feeding of low birth weight infants in low- and middle-income countries. These guidelines include recommendations on what to feed low-birth weight infants, when to start feeding, how to feed, how often and how much to feed. The guidelines were developed using the process described in the WHO Handbook for Development of Guidelines.

Systematic reviews were conducted to answer 18 priority questions identified by the guidelines development group. The population of interest is low-birth weight infants, and the critical outcomes include mortality, severe morbidity, growth and development. The implementation of these guidelines in low- and middle-income countries is expected to improve care and survival of low birth weight infants.

Oral Health Surveys Oxford University Press

This title provides an introduction to child health in the community for those with some experience of clinical pediatrics and is an excellent text for self-directed learning and examination preparation. Its emphasis is on the social and educational significance of pediatric problems.
