Oxford Textbook of Plastic and
Reconstructive Surgery Oxford
University Press, USA

Master Techniques in Rhinoplasty is a concise yet comprehensive, multi-authored, multi-specialty surgical text and video atlas that provides all the guidance you need to get the best outcomes in rhinoplasty. Babak Azizzadeh, MD, FACS and other leading experts guide you through both open and endonasal primary and secondary rhinoplasty techniques with the use of step-by-step procedures, color line drawings, intraoperative photographs, and narrated videos on DVD. Expertly perform the latest open and endonasal techniques for both primary and revision rhinoplasty and give your patients the outstanding results they demand. Choose the most promising approach based on multiple expert viewpoints on the advantages and disadvantages of each approach. Review history, personal philosophy, anatomy, preoperative analysis, technique, and postoperative care, and complication avoidance for each procedure - all the information you need to get the best outcomes. Master the nuances of each new technique through step-by-step instructions and beautiful, detailed line drawings and intraoperative photographs. Watch master surgeons perform techniques in narrated videos on the included DVD. Tap into the experience and expertise of leading reconstructive and cosmetic

plastic surgeons.

Evidence-Based Plastic Surgery

Springer

Plastic surgeons may go through extensive training to be excellent clinicians, but they often end up learning how to practice the business of medicine through trial and error. This unique book, targeted specifically at plastic surgeons and other general practitioners, seeks to address this glaring weakness; it offers many different viewpoints while covering a wide ranging multitude of topics that includes the latest know-how on how to build one's website and office surgery suite, track his practice for increased productivity, and develop medical inventions and a medspa. The Business of Plastic Surgery also features notable authors like Michael Longaker, Robert M Pearl, and Mark Gorney.

Elsevier Health Sciences

Monthly. Abstracts from world literature about all aspects of plastic and reconstructive surgery. Classified arrangement of entries. Subject, author indexes.

Plastic surgery CRC Press

The Year Book of Plastic and Aesthetic Surgery provides information valuable for the continued professional development of plastic surgeons at all levels of skill and knowledge. The Year Book of Plastic and Aesthetic Surgery presents abstracts of articles from journals worldwide that touch upon all aspects of plastic and reconstructive surgery. Commentaries from experienced surgeons evaluate the clinical importance of each article and

discuss its application to clinical practice. Focused, fast, and insightful information for the busy surgeon.

Design, Measurement and Evaluation, an Issue of Clinics in Plastic Surgery

Saunders

The Oxford Textbook of Plastic and Reconstructive Surgery is a comprehensive reference text detailing all aspects of plastic surgery pertinent to a surgeon in training for specialisation and suitable to use in preparation for the Intercollegiate Examination as all aspects of the curriculum are covered. It is part of the Oxford Textbooks in Surgery series, edited by Professor Sir Peter Morris. This volume is also the perfect resource for practicing plastic surgeons; summarising contemporary trial knowledge as well as discussing anatomy, examination and techniques. Chapters are divided into those that detail basic principles and technique, and those that, on a regional basis, describe the conditions and their treatments that form the wide spectrum of reconstructive and aesthetic plastic surgery. The book is split into 13 comprehensive sections; these include General Principles, Burns, Nerve, Limbs, Facial Trauma, Cosmetic surgery, and Ethics among other key areas in the field. This highly illustrated full colour textbook has an innovative and user-friendly style, including over 1000 photographs, clinical images, and line drawings. Bringing together the expertise of almost 200 specialist contributors in the field, the Oxford Textbook of Plastic and Reconstructive Surgery is a highly valuable source of information.

Taylor & Francis

Childhood Abuse, Body Shame, and Addictive Plastic Surgery explores the

psychopathology that plastic surgeons can encounter when seemingly excellent surgical candidates develop body dysmorphic disorder postoperatively. By examining how developmental abuse and neglect influence body image, personality, addictions, resilience, and adult health, this highly readable book uncovers the childhood sources of body dysmorphic disorder. Written from the unique perspective of a leading plastic surgeon with extensive experience in this area and featuring many poignant clinical vignettes and groundbreaking trauma research, this heavily referenced text offers a new explanation for body dysmorphic disorder that provides help for therapists and surgeons and hope for patients.

Cosmetic Injection Techniques Elsevier Health Sciences

The second edition of Operative Plastic Surgery is a fully-updated, comprehensive text that discusses the most common plastic surgery procedures in great detail. It covers the classic techniques in plastic surgery, as well as the most recent technical advances, while maintaining a systematic approach to patient care within each chapter. Traversing the entirety of the human body, each chapter addresses assessment of defects, preoperative factors, pathology, trauma, operative indications and procedure, and more. Also covered is the operative room setup, with special consideration given to the operative plan, patient positioning and markings, and technique for each type of surgery. Detailing over 90 specific surgical techniques, this book covers both reconstructive and aesthetic plastic surgery. A new section addresses non-invasive techniques such as Botox, injectables, lasers, and skincare. New

chapters throughout the book also include ALT flaps, nasal cleft deformities, ZMC fractures, augmentation mastopexy, body contouring for the massive weight loss patient, and endoscopic carpal tunnel repair. Led by Gregory R.D. Evans, this volume assembles thought leaders in plastic surgery to present operative surgery in a clear, didactic, and comprehensive manner, and lays the groundwork for ideas that we have just scratched the surface of, such as translational research, fat grafting, stem cells, and tissue engineering.

Master Techniques in Rhinoplasty UCL Press

Employed for both cosmetic and reconstructive purposes, breast implants are one of the most widely-used and controversial prostheses available. The development of safe, reliable products is vital to the future of this important field of surgery. Biomaterials in plastic surgery reviews the history, materials and safety issues associated with breast implants. Beginning with an introduction to the history of biomaterials used for breast augmentation, Biomaterials in plastic surgery goes on to discuss development issues. It then discusses the chemistry and physical properties of biomedical silicones before reviewing cohesive gel and polyurethane foam implants. The book concludes by analysing the epidemiological evidence on the safety issues relating to breast implants, followed by a review of retrieval and analysis of breast implants

emphasizing strength, durability and failure mechanisms. With its distinguished editors and international team of expert contributors, Biomaterials in plastic surgery is an important guide for surgeons, manufacturers and all those researching this important field. Comprehensively examines the history, materials and safety issues associated with breast implants Provides an overview of the history of biomaterials used for breast augmentation and goes on to discuss the development and chemical and physical properties of biomedical silicones Reviews cohesive gel breast implants and polyurethane foam breast implants

Selected Abstracts of the Annual Conference of the European Academy of Facial Plastic Surgery, London, September 23-25, 2016 CRC Press

A concise guide to state-of-the-art nonsurgical body contouring from pioneers in the field! Emerging Technologies in Face and Body Contouring by internationally acclaimed experts Spero Theodorou, Christopher Chia, Erez Dayan and esteemed contributors, details emerging state-of-the-art technologies in minimally-invasive body contouring. This resource fills a void in the literature, providing plastic, aesthetic, and dermatologic surgeons with clinical insights on the latest proven techniques in nonsurgical fat reduction and skin tightening. The book begins with chapters on 3D imaging for emerging body contouring technologies, clinically applicable concepts of fat metabolism, and discussion of laser and ultrasound. Procedural chapters cover a diverse array of cutting-edge noninvasive body contouring and VASER techniques, including water-assisted and power-assisted liposuction. Chapters dedicated

to the face and neck detail scarless face lifting, injection lipolysis, and radiofrequency skin tightening. Body-specific chapters focus on the neck, arms, abdomen, flanks and hips, gluteal region, thighs and calves, ankles and knees. Key Features Concise text walks readers through techniques in a stepwise manner, with numerous patient cases and explanations detailing the pros and cons of each modality Coverage of the latest techniques including Brazilian butt lift surgery, cryolipolysis (CoolSculpting), and diverse radiofrequency procedures Special topics include the role of stem cells in body contouring, ethnic considerations in liposuction, and male gynecomastia treatment High quality illustrations enhance understanding of anatomy and procedures Focused on the practical application of evidence-based technologies, this remarkable resource will help plastic surgeons and dermatologic surgeons improve patient outcomes and ROI.

Implement TMR with Your Patients and Improve Their Quality of Life Developed by Dr. Todd A. Kuiken and Dr. Gregory A. Dumanian, targeted muscle reinnervation (TMR) is a new approach to accessing motor control signals from peripheral nerves after amputation and providing sensory feedback to prosthesis users. This practical approach has many advantages over other neural-machine interfaces for the improved control of artificial limbs. Targeted Muscle Reinnervation: A Neural Interface for Artificial Limbs provides a template for the clinical implementation of TMR and a resource for further research in this new area of science. After describing the basic scientific concepts and key principles underlying TMR, the book

presents surgical approaches to transhumeral and shoulder disarticulation amputations. It explores the possible role of TMR in the prevention and treatment of end-neuromas and details the principles of rehabilitation, prosthetic fitting, and occupational therapy for TMR patients. The book also describes transfer sensation and discusses the surgical and functional outcomes of the first several TMR patients. It concludes with emerging research on using TMR to further improve the function and quality of life for people with limb loss. With contributions from renowned leaders in the field, including Drs. Kuiken and Dumanian, this book is a useful guide to implementing TMR in patients with high-level upper limb amputations. It also supplies the foundation to enable improvements in TMR techniques and advances in prosthetic technology.

YEAR BOOK OF PLASTIC AND AESTHETIC SURGERY 2014

Thieme

Evidence-based plastic surgery integrates the best research evidence with clinical expertise and patient values. The purpose of this issue is to assist surgeons at any stage in their careers, from residents and clinical fellows to established clinical surgeons and academic practitioners, to address important clinical questions through correct research methods. Topics covered in the issue include how to formulate clinically important questions; what study design can best answer a specific research question; how to measure the results of surgical interventions, in particular the health status and quality of life of patients; and how to evaluate one's practice through cost-effectiveness analysis.

First International Congress of Plastic Surgery Oxford University Press

This book demonstrates why oncoplastic and reconstructive surgery represents such an exciting tool for surgeons who undertake breast surgery. Fundamental principles and basic concepts are clearly outlined, and numerous techniques are presented by acknowledged experts from across the world. The emphasis is very much on a “how to do” approach, with detailed guidance and advice on the various techniques. The informative text is supported by a wealth of color illustrations, and accompanying videos of procedures can be accessed via the publisher’s website. This second edition of *Oncoplastic and Reconstructive Breast Surgery* has been completely revised and updated. More than 25 additional chapters have been included, and new videos of surgeries made available, with the aim of making this already very successful book truly comprehensive, and the most complete reference on the subject – a true classic. The new edition entails close collaboration between some of the most important centers for breast cancer treatment and research worldwide. It will be an ideal resource for surgical fellows and specialists wishing to learn about indications and the selection of patients, to master technical skills, and to manage complications effectively.

Plastic Surgery 2006 Thieme

This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God’s special

gifts to human beings, God’s revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice – the maqa' sid – which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

Elsevier

A unique resource for passing the rigorous American Board of Plastic Surgery oral board exam *Passing the plastic surgery board examinations necessitates meeting extremely demanding criteria. Certification from the ABPS is the gold standard – a significant milestone requiring intensive study, passing the written exam, and the highly challenging two-day oral board component. Acing the plastic surgery boards means a plastic surgeon has already demonstrated a high level of training and education, essential elements for achieving optimal results and patient satisfaction. Plastic Surgery Oral Board Prep: Case Management Questions and Answers* by Devra Becker restructures core plastic surgery knowledge into the conceptual framework needed for mastery of the plastic surgery oral board exam. It fills a

gap in the literature, exploring levels of knowledge such as analysis, synthesis, and evaluation, as well as practical applications including fluid management, intraoperative and postoperative challenges, and ethical considerations. Questions and answers on key reconstructive, aesthetic, and elective procedures are encompassed throughout 22 chapters, enabling readers to synthesize knowledge and articulate it efficiently and effectively. Key Highlights Nearly 400 Q&A mirror the type and sequencing of questions on the oral board exam Reconstruction topics include skin cancer, facial defects and trauma, back and trunk, traumatic hand injuries, lower extremity wounds, cleft lip and palate, and craniosynostosis syndromes Aesthetic and elective surgery chapters cover the aging face, breast, body and trunk, and hand Current recommendations for management of coexisting medical conditions such as thromboembolism prophylaxis and perioperative management of cardiac disease This is an invaluable board study resource for plastic surgery residents and surgeons preparing for the oral board exam. Its comprehensive core curriculum content will also benefit clinicians prepping for in-service exams.

Oncoplastic and Reconstructive Breast Surgery Elsevier

3D Bioprinting for Reconstructive Surgery: Techniques and Applications examines the combined use of materials, procedures and tools necessary for creating structural tissue constructs for reconstructive purposes. Offering a broad analysis of the field, the first set of chapters review the range of biomaterials which can be used to create 3D-printed tissue constructs. Part Two looks at the techniques needed to

prepare biomaterials and biological materials for 3D printing, while the final set of chapters examines application-specific examples of tissues formed from 3D printed biomaterials. 3D printing of biomaterials for tissue engineering applications is becoming increasingly popular due to its ability to offer unique, patient-specific parts—on demand—at a relatively low cost. This book is a valuable resource for biomaterials scientists, biomedical engineers, practitioners and students wishing to broaden their knowledge in the allied field. Discusses new possibilities in tissue engineering with 3D printing Presents a comprehensive coverage of the materials, techniques and tools needed for producing bioprinted tissues Reviews emerging technologies in addition to commercial techniques

Essentials of Plastic Surgery: Q&A Companion is the companion to Essentials of Plastic Surgery, Second Edition, which covers a wide variety of topics in aesthetic and reconstructive plastic surgery. As such, it is designed to test your knowledge of the source book, which may be helpful in the clinical setting and beyond. It presents both multiple choice questions and extended matching questions in single best answer format. The 1200 questions are carefully constructed to be practical and thorough, and are accompanied by detailed answers that help enhance understanding of both the right and wrong answers. Compact enough to fit in a lab coat pocket, its design and organization allow for quick and easy reading. The print book is accompanied by a complimentary eBook that can be accessed on smartphones and tablets. It is the go-to resource for all students of plastic surgery, whether residents in training or experienced practitioners.

W B Saunders Company

The injection of cosmetic neurotoxins and fillers is a multi-billion dollar industry in which facial plastic surgeons, plastic surgeons, dermatologists, oculoplastic surgeons, and paraprofessionals in the U.S. perform more than seven million injections annually. Cosmetic Injection Techniques and the videos that accompany it provide all medical professionals in the field (from beginners to experienced injectors) with practical information on how to properly administer neurotoxin and filler injections for conditions such as lower eyelid roll, nasal flare, platysmal banding, marionette lines, glabellar frown lines, and much more. Key Features: Full color, detailed illustrations describe key anatomical landmarks and identify exact injection locations Online access to videos narrated by Dr. Kontis that demonstrate multiple injection techniques A unique rating system for each procedure, enabling injectors to perform techniques appropriate to their skill level Every commonly performed cosmetic injection procedure is covered, giving readers a comprehensive guide on how to safely and effectively perform injections This easy-to-use manual gives facial plastic surgeons, plastic surgeons, dermatologists, oculoplastic surgeons and other medical professionals authoritative, concise information on the anatomy, techniques, precautions, complications, and post-treatment care involved in the administration of injections of cosmetic neurotoxins and fillers.
