'Expenditure Policies
Toward EU Accession'
presents the set of
public expenditures
that could be
conductive to rapid

growth and
convergence among
the Central and
Eastern European
countries. This report
assesses public
expenditure policy
objectives and
provides best practice
and lessons learned in
designing expenditure
reforms within these
countries. It also
highlights ways in
which key expenditure
programs such as
education,
environment, and
transport can be
redirected so as to be
more fully supportive
of growth objectives.

Bernard Spencer
Now Publishers Inc

Provides concise, yet authoritative descriptions of the most common techniques used to study wild carnivores and to conserve and manage their populations within increasingly human-dominated landscapes.

Aeroecology CRC Press

This book explores the evolution and current state of the scholarly field of comparative and international education over 200 years of development. Experts in the field explore comparative and international education in each of the major world regions.

Environmental Impacts of Wind-Energy Projects Cambridge University Press

Randomized algorithms have become a central

part of the algorithms curriculum, based on their increasingly widespread use in modern applications. This book presents a coherent and unified treatment of probabilistic techniques for obtaining high probability estimates on the performance of randomized algorithms. It covers the basic toolkit from the Chernoff-Hoeffding bounds to more sophisticated techniques like martingales and isoperimetric inequalities, as well as some recent developments like Talagrand's inequality, transportation cost inequalities and log-Sobolev inequalities. Along the way, variations on the basic theme are examined,

such as Chernoff–Hoeffding bounds in dependent settings. The authors emphasise comparative study of the different methods, highlighting respective strengths and weaknesses in concrete example applications. The exposition is tailored to discrete settings sufficient for the analysis of algorithms, avoiding unnecessary measure-theoretic details, thus making the book accessible to computer scientists as well as probabilists and discrete mathematicians. University of Texas Press

Approaches and methods in comparative education are of obvious importance, but do not always receive

adequate attention. This second edition of a well-received book, containing thoroughly updated and additional material, contributes new insights within the longstanding traditions of the field. A particular feature is the focus on different units of analysis. Individual chapters compare places, systems, times, cultures, values, policies, curricula and other units. These chapters are contextualised within broader analytical frameworks which identify the purposes and strengths of the field. The book includes a focus on intra-national as well as cross-national comparisons, and highlights the value of approaching themes from different angles. As already

demonstrated by the first edition of the book, the work will be of great value not only to producers of comparative education research but also to users who wish to understand more thoroughly the parameters and value of the field.

Avian Malaria and Related Parasites in the Tropics Springer Science & Business Media

Urban Raptors is the first book to offer a complete overview of urban ecosystems in the context of bird-of-prey ecology and conservation. This comprehensive volume examines the urban environment, explains why some species adapt to urban areas but others do not, and introduces modern research tools to help

in the study of urban raptors. It delves into climate change adaptation, human-wildlife conflict, and the unique risks birds of prey face in urban areas before concluding with real-world wildlife management case studies and suggestions for future research and conservation efforts. Among researchers, urban green space planners, wildlife management agencies, birders, and informed citizens alike, *Urban Raptors* will foster a greater understanding of birds of prey and an increased willingness to accommodate them as important members, not intruders, of our cities.

Turkish and Other Muslim Minorities in Bulgaria Carnivore

Ecology and Conservation

The disintegration of Yugoslavia in the early 1990s ended the Yugoslavian Federation, which for nearly fifty years had succeeded in preserving a delicate coexistence among the ethnic, religious, and national components contained within it. Following this, the Balkans became a violent arena of confrontation due to these warring factions. Islamic Terror and the Balkans describes and analyzes the growth of radical Islam in the Balkans from its inception during the years of World War II to the present. Shay's account shows how the Bosnian War between the Muslims and the Serbs provided the historical opportunity

for radical Islam to penetrate the Balkans, at a time when the Muslim world, headed by Iran and the various Islamic terror organizations, including Al-Qaida, came to the aid of the Muslims in Bosnia. In the framework of the mobilization of these entities in aiding the Muslim side in the conflict, the operational and organizational infrastructure of Iranian intelligence and the Revolutionary Guards was established, as well as those operated by other Islamic terror organizations. When war in Bosnia ended, terrorist infrastructures remained in the Balkans and served as a basis for these entities' intervention in the confrontation that

developed in the Balkans in the late-1990s, specifically in Kosovo and Macedonia. Today, the Balkans serve as a forefront on European soil for Islamic terror organizations, which exploits this area to promote their activities in Western Europe, Russia, and other focal points worldwide.

Shay's analysis of terror activity in the aftermath of the September 11 attacks and exposure of terror cells throughout the world, and particularly in Europe, attest to the increasing involvement of the "Balkan alumni" and of the terrorist infrastructure from this area in creating global terror activity.

Comparative and International Education
Routledge
Providing a broad

overview of the many card systems and solutions in practical use today, this state-of-the-art work is written by contributing authors who are active researchers and acknowledged experts in their field. A single book cannot be found to match both the breadth and depth of content. The book combines a cross-discipline overview of smart cards, tokens and related security and applications plus a technical reference to support further research and study. A step-by-step approach educates the reader and by the end of the book the reader should be able to play an educated role in a smart card related project.

Living on the Edge

Publications

New review of bird conservation compiled by Ian Burfield and Frans van Bommel In 1994 BirdLife International published the landmark Birds in Europe: their Conservation Status - the first ever review of the conservation status of all regularly occurring European birds. This book rapidly became a cornerstone of BirdLife's conservation work and is widely used by the European Commission, national governments and NGO's. Fully updated, Birds in Europe: Population Estimates, Trends and Conservation Status covers the European continent from Greenland in the west to the Urals in the east, and from Svalbard in the north to the Canary

Islands in the south, including Balkan and Caucasian countries where political instability made data collection impossible in 1994. Setting a new standard for conservation data, Birds in Europe (1994) was highly praised for the depth and breadth of its research. Monitoring programmes established since then have provided an even higher accuracy and quality of data for Birds in Europe (2004). Full population data is included on all 526 species regularly occurring in Europe. Half a page is devoted to each species, including an illustration, distribution map, population and trends data, status information, and a concise summary of its

status across Europe. What the reviewers said about Birds in Europe (1994): "This work can only be described as monumental" British Birds "Anyone travelling to a European country should use this book to find out what is really happening" British Birds "This professionally researched, excellently presented and yet affordable book provides a unique review of the conservation status of European birds" Biological Conservation "an astonishing tour de force" Ibis "an ornithological bible for any bookshelf..Bird Book of the Year 1995" Birdwatch "a veritable goldmine of information on breeding and wintering

populations across the continent" Birdwatch "Should be compulsory reading for Europe's environment ministers" New Scientist "Any serious birder will find this fascinating reading" New Scientist "The baseline for the conservation of the birds of Europe" Birding World '...easily readable information has been crammed into a small space, with which it is possible to get a good general picture of the status of a species in Europe' - Alula. `An invaluable indicator of the health of Europe's birdlife, clearly showing where conservation efforts should be concentrated. The publishers should be congratulated.' Birdwatch `A fascinating browse... well-produced and not

expensive, so everyone with a serious interest in the birds of Europe should own a copy. 'Birding World` Genuinely continent-wide... a frightening amount of information is packed into each species account, but the layout is clear and you can cut to the chase quickly if you are in a hurry... Deserves a wide audience. Highly recommended.' British Birds

The Return of the Unicorns A&C Black
This book constitutes the refereed proceedings of the 11th International Conference on Distributed Computing and Networking, ICDCN 2010, held in Kolkata, India, during January 3-6, 2010. There were 169 submissions, 96 to the networking track

and 73 to the distributed computing track. After review the committee selected 23 papers for the networking and 21 for the distributed computing track. The topics addressed are network protocol and applications, fault-tolerance and security, sensor networks, distributed algorithms and optimization, peer-to-peer networks and network tracing, parallel and distributed systems, wireless networks, applications and distributed systems, optical, cellular and mobile ad hoc networks, and theory of distributed systems.

Smart Cards, Tokens, Security and Applications Potomac Books, Inc.

This book is a collection of papers

highlighting ways in which Raptors have successfully adapted to man-made landscapes and structures. The coverage of Raptors in Human Landscapes is broad, ranging from the impact of human activity on country-wide scales to the particular conditions associated with urban, cultivated, and industrial landscapes, as well as to the various schemes specifically directed towards the provision of artificial nest sites and platforms. The cases described hail from a wide geographic range including North and South America, Europe, Africa and elsewhere, and from a broad spectrum of species groups such as the falcons, accipiters, eagles, kites, and many others. This is a

book of immense value not only to ornithologists and conservation biologists, but also to engineers and managers involved in all kinds of building and environmental work in cities, power and water works, agriculture, and forestry. Serves as a good introduction to all aspects of the subject. Focuses on successful adaptations of Raptors to environmental change

Global E-Security

Emerald Group

The generation of electricity by wind energy has the potential to reduce environmental impacts caused by the use of fossil fuels. Although the use of wind energy to generate electricity is increasing rapidly in the United States,

government guidance to help communities and developers evaluate and plan proposed wind-energy projects is lacking. *Environmental Impacts of Wind-Energy Projects* offers an analysis of the environmental benefits and drawbacks of wind energy, along with an evaluation guide to aid decision-making about projects. It includes a case study of the mid-Atlantic highlands, a mountainous area that spans parts of West Virginia, Virginia, Maryland, and Pennsylvania. This book will inform policy makers at the federal, state, and local levels. *Distributed Computing and Networking* Columbia University Press

Ultra-thin chips are the "smart skin" of a

conventional silicon chip. This book shows how very thin and flexible chips can be fabricated and used in many new applications in microelectronics, Microsystems, biomedical and other fields. It provides a comprehensive reference to the fabrication technology, post processing, characterization and the applications of ultra-thin chips.

COMPARATIVE EDUCATION RESEARCH

John Wiley & Sons

This two-volume compendium brings together leading scholars from around the world who provide authoritative studies of the old and new epistemic motifs and theoretical strands that have characterized the

interdisciplinary field of comparative and international education in the last 50 years. It analyses the shifting agendas of scholarly research, the different intellectual and ideological perspectives and the changing methodological approaches used to examine and interpret education and pedagogy across different political formations, societies and cultures.

Coevolution of Animals and Plants Oxford

University Press, USA

The book focuses on various aspects and properties of innate immunity, whose deep understanding is integral for safeguarding the human race from further loss of resources and

economies due to innate immune response-mediated diseases. Throughout this book, we examine the individual mechanisms by which the innate immune response acts to protect the host from pathogenic infectious agents and other non-communicable diseases. Written by experts in the field, the volume discusses the significance of macrophages in infectious disease, tumor metabolism, and muscular disorders. Chapters cover such topics as the fate of differentiated macrophages and the molecular pathways that are important for the pathologic role of macrophages.

Urban Raptors Oxford

University Press on Demand

Following the enlargement of the European Union in May 2004, Roma (or gypsies) are now the largest minority group in Europe. They are also one of the poorest and most vulnerable groups, living mainly in Central and Eastern Europe, suffering poverty levels as high as ten times that found within majority populations. The lack of information about the living conditions and needs of Roma people compound these stark gaps in human development outcomes. This publication, prepared for a conference held in Budapest, Hungary in June 2003, brings together original sociological research, evaluations of programme initiatives, and the first

comparative cross-country household survey on ethnicity and poverty. It finds that Roma poverty is multi-faceted and can only be addressed by a inclusive policy approach which respects their diversity.

RAPTORS IN HUMAN LANDSCAPES

Springer Science & Business Media International Perspectives on Education is intended for those with an interest in education as an academic area, including students of Education Studies and MA Education. It is also suitable for those who have an interest in applied theory, including those involved in or training for the teaching profession; and to those who are

concerned with the management and governance of education: those who formulate policy, those charged with inspecting or advising the profession, and those (such as head teachers or school governors) whose task is to guide others.

**Common Interests,
Uncommon Goals**

Springer Nature
When Bernard Spencer died in September 1963, he left behind two collections of poetry and a volume of collaborative translations from George Seferis. The second of these collections, *With Luck Lasting*, has proved aptly entitled with the publications of a *Collected Poems* (1965) edited by Alan Ross, an enlarged edition from 1981

edited by Roger Bowen, and a *Complete Poetry, Translations & Selected Prose* (2011) edited by Peter Robinson. With Bernard Spencer: *Essays on his Poetry & Life*, Robinson now offers the first collection of writings dedicated to the poet. Coming out of a 2009 centenary conference at Special Collections in the University of Reading, where his archive is housed, these essays cover a great many aspects of Spencer's poetry, translations, and his relations with contemporary writers. The volume also contains an updated bibliography of primary and secondary materials, and forms an invaluable aid to approaching this distinctive voice in

mid-twentieth-century poetry.

The lake charr

Salvelinus namaycush is a ubiquitous member of cold-water lake ecosystems in previously glaciated regions of northern continental U.S., Alaska, and Canada that often support important commercial, recreational, and subsistence fisheries.

The lake charr differs from other charrs by its large size, longevity, iteroparity, top-predator specialization, reduced sexual dimorphism, prevalence of lacustrine spawning, and use of deepwater habitat. The species is remarkably variable in phenotype, physiology,

and life history, some of which is reflected in its ecology and genetics, with as many as four morphs or ecotypes co-occurring in a single lake. The lake charr is often the top predator in these systems, but is highly adaptable trophically, and is frequently planktivorous in small lakes. The lake charr by their name highlights their common habitat, lakes both large and small, but often frequents rivers and occasionally moves into the Arctic Ocean. Movement and behaviour of lake charr are motivated by access to cool, well-oxygenated water, foraging opportunities, predator avoidance, and reproduction. Owing to their broad distribution and trophic level, the lake charr

serves as a sentinel of anthropogenic change. This volume will provide an up-to-date summary of what is currently known about lake charr from distribution to genetics to physiology to ecology. The book provides a compilation and synthesis of available information on the lake charr, beginning with an updated distribution and a revised treatment of the paleoecology of the species. Understanding of ecological and genetic diversity and movement and behaviour of the species has advanced

remarkably since the last major synthesis on the species over 40 years ago. Mid-sections of the book provide detailed accounts of the biology and life history of the species, and later sections are devoted to threats to conservation and fishery management practices used to ensure sustainability. A new standard lake charr-specific terminology is also presented. The book will be a valuable reference text for biologists around the world, ecologists, and fishery managers, and of interest to the angling public.
