**Pillars of Prosperity**

Springer

This book offers an  
innovative examination  
of how

'low-technology'  
industries operate.

Based on extensive  
fieldwork in India, the  
book fuses economic  
and sociological  
perspectives on  
information sharing by  
means of informal  
interaction in a low-

technology cluster in a  
developing country. In  
doing so, the book  
sheds new light on  
settings where  
economic relations  
arise as emergent  
properties of social  
relations. This book  
examines industrial  
innovation and  
microeconomic  
network behaviour  
among producers and  
clusters, perceiving  
knowledge diffusion to  
be a socially-spatial, as  
much as a  
geographically spatial,  
phenomenon. This is  
achieved by employing  
two methods -

simulation modelling, and (quantitative, qualitative, and historical) social network analysis. The simulation model, based on its findings, motivates two empirical studies – one descriptive case and one network study – of low-tech rural and semi-urban traditional technology clusters in Kerala state in southern India. These cases demonstrate two contrasting stories of how social cohesion either supports or thwarts informal information sharing and learning. This book pushes towards an economic-sociology approach to understanding knowledge diffusion and technological learning, which perceives innovation and learning as being

more social processes than the mainstream view perceives them to be. In doing so, it makes a significant contribution to the literature on defensive innovation and the role of networks in technological innovation and knowledge diffusion, as well as to policy studies of Indian small firm and traditional technology clusters.

**The New Geography of Jobs** Edward Elgar Publishing

This detailed book explores and provides insights into the development and transformation of various clusters, economies and industrial sectors in East and Southeast Asia. The authors study a number of important issues including the role of information and

communication technology in economic growth, an emerging biomedical cluster in South Korea, an industrial agglomeration of Taiwanese electronics firms in China, and different sectorial and regional growth models in China. They also investigate the increasing relevance of cluster policies and the need to understand them in the context of the institutional and structural transition of newly industrializing East Asian economies. The book moves on to study the technology intensity of FDI in Vietnam and the implications for economic growth and emerging clusters, as well as the origin and characteristics of foreign technology transfer in a Chinese

aircraft industry cluster. Clusters and Economic Growth in Asia will greatly appeal to academics, researchers, politicians, policy planners and industrial specialists, as well as those with a specific interest in clusters and economic growth in Asian economies. Building High-Tech Clusters National Academies Press As a core volume in the Dynamics of Economic Space series, contributors from North America, Australasia, Europe and the Middle East each address the constitutive processes of new economic and institutional spaces and the theoretical, methodological and policy-engaging practices of emerging economic geographies. Together, they provide

a timely and important overview of the current debates about the geographies of economic change. As national and regional economies change rapidly, so the frameworks, concepts and methods used to describe and analyse those processes also need to evolve. This volume puts forward a comprehensive analysis of a range of different and innovative means currently available, through which to view regional economic activities and interactions.

**China's New Creative Clusters**

Cambridge University Press

How nations can promote peace, prosperity, and stability through cohesive political

institutions "Little else is required to carry a state to the highest degree of opulence from the lowest barbarism, but peace, easy taxes, and a tolerable administration of justice; all the rest being brought about by the natural course of things." So wrote Adam Smith a quarter of a millennium ago. Using the tools of modern political economics and combining economic theory with a bird's-eye view of the data, this book reinterprets Smith's pillars of prosperity to explain the existence of development clusters—places that tend to combine effective state institutions, the absence of political violence, and high per-capita incomes. To

achieve peace, the authors stress the avoidance of repressive government and civil conflict. Easy taxes, they argue, refers not to low taxes, but a tax system with widespread compliance that collects taxes at a reasonable cost from a broad base, like income. And a tolerable administration of justice is about legal infrastructure that can support the enforcement of contracts and property rights in line with the rule of law. The authors show that countries tend to enjoy all three pillars of prosperity when they have evolved cohesive political institutions that promote common interests, guaranteeing the provision of public goods. In line with

much historical research, international conflict has also been an important force behind effective states by fostering common interests. The absence of common interests and/or cohesive political institutions can explain the existence of very different development clusters in fragile states that are plagued by poverty, violence, and weak state capacity.

*Clusters and Economic Growth in Asia* OUP  
Oxford

A rising young economist at Berkeley makes correlations between success and geography, explaining how such rising centers of innovation as San Francisco, Boston and Austin are likely to offer influential opportunities and

shape the national and global economies in positive or detrimental ways.

"An innovative book for

an innovative topic." Charles Hampden-Turner Like the subject matter it covers, Clusters of Creativity is innovative and original. It breaks with popular interpretations of Silicon Valley and similar regions, which range from the hyperbolically laudatory to the contemptuously dismissive, and takes a critical, objective look at the lessons that these locations provide about innovation and entrepreneurship. Readable, yet rigorous in its analyses, the book provides a practical and balanced set of perspectives on how the powers of business creativity are fostered and sustained. It focuses not so much on the generations of high technologies but on the motivations and

strategies of business leaders who turn revolutionary innovations into commercial realities. Clusters of Creativity demystifies the many enigmas that surround two leading capitals of the modern global economy, providing insights on managing innovation and entrepreneurship that are both eye-opening and broadly applicable to all organizations and industries. Clusters of Creativity will challenge assumptions, dispel myths, enlighten, inspire, and generally provoke thought. In an age where technology and hyperbole frequently go hand-in-hand, the book's well-founded insights are all the more refreshing and important.

**The Economics of**

## Regional Clusters

Routledge

America's position as the source of much of the world's global innovation has been the foundation of its economic vitality and military power in the post-war. No longer is U.S. pre-eminence assured as a place to turn laboratory discoveries into new commercial products, companies, industries, and high-paying jobs. As the pillars of the U.S. innovation system erode through wavering financial and policy support, the rest of the world is racing to improve its capacity to generate new technologies and products, attract and grow existing industries, and build positions in the high technology industries of tomorrow. Rising to

the Challenge: U.S. Innovation Policy for Global Economy emphasizes the importance of sustaining global leadership in the commercialization of innovation which is vital to America's security, its role as a world power, and the welfare of its people. The second decade of the 21st century is witnessing the rise of a global competition that is based on innovative advantage. To this end, both advanced as well as emerging nations are developing and pursuing policies and programs that are in many cases less constrained by ideological limitations on the role of government and the concept of free market economics. The rapid transformation of the

global innovation landscape presents tremendous challenges as well as important opportunities for the United States. This report argues that far more vigorous attention be paid to capturing the outputs of innovation - the commercial products, the industries, and particularly high-quality jobs to restore full employment. America's economic and national security future depends on our succeeding in this endeavor.

*Innovation Clusters and Interregional*

*Competition* Oxford University Press

This volume contains the proceedings of the international conference "Complexity and Industrial Clusters: Dynamics and Models

in Theory and Practice", organized by Fondazione Comunita e Innovazione and held in Milan on June 19 and 20, 2001 under the aegis of the Accademia Nazionale dei Lincei (founded in Rome in 1604), one of the oldest and most famous national academies of science in the world.

Fondazione Comunita e Innovazione encourages research and the dissemination of knowledge about social, economic, cultural and civil issues. It promotes research and innovation related to local production systems and industrial districts, with special reference to: the interactions between large companies and SMEs (small and medium-size

enterprises), the effects of industrial districts on the development and welfare of their communities and of neighbouring areas, the effects of globalisation on these local systems of productions. Fondazione Comunita e Innovazione was created in Milan in 1999. It supports studies, publications, and events, both on its own and in cooperation with corporations, research institutes, foundations, associations and universities. It also grants scientific sponsorship to research that is in line with its mission, as set forth in its by-laws. The founding member of the Fondazione is Edison (formerly Monted:son). The other

subscribing members, in historical order, are: Ausimont, Tecnimont, Eridania, Accenture, and PricewaterhouseCoope rs.

*Clusters and the New Economics of Competition* World Bank Publications

This book integrates diversified methodologies of area studies, regional economic development, regional science, and related fields to draw up a strategy for forming the “regional food industrial cluster” in Northeast Asia. This is done by assigning “innovation” to a core concept, with the basic problem of food security as the horizontal axis and the areas of Northeast Asia as the vertical axis. Specifically, the

principle of “collaborative advantage” as a key factor is extracted from case studies on food industrial clustering in each area. As a final objective, a practical policy recommendation is presented while the theorization of the industrial cluster is developed. Therefore it is also a challenge to the old and new issue of food security which has been argued until now.

### **COMPLEXITY AND INDUSTRIAL CLUSTERS**

Routledge  
Clusters policies have become a key focus for policy makers in recent years. This book looks at the development of clusters of economic activity and their importance in shaping industrial and public

policy. It examines the success and failures of policy in France and extrapolates its findings to the rest of the world.

### **Sustainable Port Clusters and Economic Development**

Edward Elgar Publishing  
'Research Without Tears' provides a concise and fascinating guide for those starting their first research project and writing a paper, report or thesis.  
Asian Industrial Clusters, Global Competitiveness and New Policy Initiatives  
Houghton Mifflin Harcourt

This book studies the determinants of cluster survival by analyzing their adaptability to change in the economic environment. Linking theoretic knowledge with

empirical observations, a simulation model (based in the N/K method) is developed, which explains when and why the cluster's architecture assists or hampers adaptability. It is found that architectures with intermediate degrees of division of labor and more collective governance forms foster adaptability.

## **THE COMPETITIVENESS OF CLUSTERS IN GLOBALIZED MARKETS**

Routledge

There is now a wide spread interest in regions as a key focus in the organization and governance of economic growth and wealth creation. This important book considers the factors that influence and

shape the competitive performance of regions. This is not just an issue of academic interest and debate, but also of increasing policy deliberation and action. However, as the readings in this book make clear, the very idea of regional competitiveness is itself complex and contentious. Many academics and policy makers have used the concept without fully considering what is meant by the term and how it can be measured. Policy formulation has tended to rush ahead of understanding and analysis, and the purpose of this book is to close this important gap in understanding. This book was previously published as a special issue of *Regional Studies*.

A Life Cycle for  
Clusters? Edward Elgar  
Publishing

Ø In the geography of  
the global economy,  
there are known Šhot  
spots ♦ where new  
technologies germinate  
at an astounding rate  
and pools of capital,  
expertise and talent  
foster the development  
of new industries and  
new ways of doing  
business. These cluste  
Clusters, Networks and  
Innovation Edward

Elgar Publishing  
This important new  
book takes a critical  
view on regional  
industry clusters, in  
particular their  
identification and  
formation, and the  
policies which help  
create and support  
them.

**Clusters of  
Competitiveness**

Harvard Business Press  
Competition,

competitiveness,  
innovation and growth  
are inherently linked.  
This book covers the  
main ideas underlying  
competitiveness and  
its applications,  
drawing lessons for  
developing economies  
and relevant policy  
recommendations.

*Innovation in Clusters*  
Springer Science &  
Business Media

When asked to define  
the ideal leader, many  
would emphasize traits  
such as intelligence,  
toughness,  
determination, and  
vision—the qualities  
traditionally associated  
with leadership. Often  
left off the list are  
softer, more personal  
qualities—but they are  
also essential.

Although a certain  
degree of analytical  
and technical skill is a  
minimum requirement  
for success, studies

indicate that emotional intelligence may be the key attribute that distinguishes outstanding performers from those who are merely adequate. Psychologist and author Daniel Goleman first brought the term "emotional intelligence" to a wide audience with his 1995 book of the same name, and Goleman first applied the concept to business with a 1998 classic Harvard Business Review article. In his research at nearly 200 large, global companies, Goleman found that truly effective leaders are distinguished by a high degree of emotional intelligence. Without it, a person can have first-class training, an incisive mind, and an endless supply of good

ideas, but he or she still won't be a great leader. The chief components of emotional intelligence—self-awareness, self-regulation, motivation, empathy, and social skill—can sound unbusinesslike, but Goleman found direct ties between emotional intelligence and measurable business results. The Harvard Business Review Classics series offers you the opportunity to make seminal Harvard Business Review articles a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world—and will have a

direct impact on you  
today and for years to  
come.

Research Without  
Tears Clusters and the  
New Economics of  
Competition Clusters  
and the New  
Economics of  
Competition The  
Economics of Regional  
Clusters  
Examining the role of

the much-vaunted  
concepts of regional  
clusters in the  
prosperity and  
economic expansion of  
countries, this work  
looks at the different  
experiences of  
industrial districts and  
high-tech regions such  
as Silicon Valley,  
Boston's biotech  
region, and Hsinchu-  
Taipei.
