MATTEO BALL

RELATIVITY

McFarland
Before the COVID-19 pandemic, the idea of providing a basic income to everyone in Canada who needs it was already gaining broad support. Then, in response to a crisis that threatened to put millions out of work, the federal government implemented new measures which constituted Canada's largest ever experiment with a basic income for almost everyone. In this new and revised edition, Evelyn L. Forget offers a clear-eyed look at how these emergency measures could be transformed into a program that ensures an adequate basic income for every Canadian. Forget details what we can learn from earlier basic income

experiments in Canada and internationally. She weighs the options, investigates whether Canadians can afford a permanent basic income program and describes how it could best be implemented across the country. This accessible book offers everything a reader needs to decide if a basic income program is the right follow-up to the short-term government response to COVID-19. *Catalog of the Gerald K. Stone Collection of Judaica* Simon and Schuster Katalog over genstande som tilhører kongehuse Fabergé in the Royal Collection Pen and Sword History This pioneering study on environmental case-law examines how courts engage with science and reviews legitimate styles of judicial reasoning. *Leonardo Da Vinci* James Lorimer & Company Contains list of members.

Pen and Sword
New technologies are made possible by new materials, and until recently new materials could only be discovered experimentally. Recent advances in solving the crystal structure prediction problem means that the computational design of materials is now a reality. *Computational Materials Discovery* provides a comprehensive review of this field covering different computational methodologies as well as specific applications of materials design. The book starts by illustrating how and why first-principle calculations have gained importance in the process of materials discovery. The book is then split into three sections, the first exploring different approaches and ideas including crystal structure prediction from

evolutionary approaches, data mining methods and applications of machine learning. Section two then looks at examples of designing specific functional materials with special technological relevance for example photovoltaic materials, superconducting materials, topological insulators and thermoelectric materials. The final section considers recent developments in creating low-dimensional materials. With contributions from pioneers and leaders in the field, this unique and timely book provides a convenient entry point for graduate students, researchers and industrial scientists on both the methodologies and applications of the computational design of materials.

SAFEGUARDING THE NATION

University of Toronto Press

In the aftermath of the horrific trench warfare of the First World War, the poppy – sprouting across the killing fields of France and Belgium, then immortalised in John McCrae’s moving poem – became a worldwide icon. Yet the poppy has a longer history, as the tell-

tale sign of human cultivation of the land, of the ravages of war and of the desire to escape the earthly realm through inspired Romantic opium dreams or the grim reality of morphine drips. This is a story spanning three thousand years, from the ancient Egyptian fights over prized medicinal potions to the addicted veterans returning home from the American Civil War, from the British political machinations during the Opium Wars with China to the struggle to end Afghanistan’s tribal narcotics trade. Through it all, there stands the transformative poppy. Nicholas J. Saunders brings us the definitive history of this ever-enduring but humble flower of the fields, a story that is at turns tragic, eye-opening and, most essentially, life-affirming – a gift to us all.

The Royal Path of Life

Springer Science & Business Media

This book focuses on the gap between genocide as a legal term and genocidal forcible child transfer as a catastrophic experience that disrupts a group’s continuity. It argues for the need to add an Amending Protocol to the Genocide Convention in order to

provide protection from forcible transfer to all children.

THE TRUE CONFESSIONS OF CHARLOTTE DOYLE (SCHOLASTIC GOLD)

Royal Society of Chemistry

This new history of the Royal Navy, published to coincide with the Golden Jubilee of the White Ensign Association, is a full and exciting account of all the many campaigns, operations and deployments conducted around the world from the Cold War and the Cod Wars to the Falklands War and the Gulf Wars. It has been written and compiled from privileged access to secret and confidential Admiralty Plans and Commanding Officers' reports and contains a wealth of previously unpublished material. The story of how the Royal Navy has adapted to meet the many new challenges of the modern world and how it has carried out its vital roles from manning the nation's strategic nuclear deterrent to guarding the vital offshore oil and gas facilities as well as protecting Britain's worldwide interests is a truly fascinating one,

while the development of ships, submarines, aircraft, weapons, tactics and strategies as well as the changes in personnel and life at sea are brought to life by contributions from people who served over the period. Profusely illustrated throughout with many previously unpublished photographs and paintings, this beautifully-produced volume is a magnificent golden jubilee tribute to the Royal Navy.

Ballantine Books

Sir John Franklin's Arctic expedition departed England in 1845 with two Royal Navy bomb vessels, 129 men and three years' worth of provisions. None were seen again until nearly a decade later, when their bleached bones, broken instruments, books, papers and personal effects began to be recovered on Canada's King William Island. These relics have since had a life of their own--photographed, analyzed, cataloged and displayed in glass cases in London. This book gives a definitive history of their preservation and exhibition from the Victorian era to the present, richly illustrated with period engravings and photographs, many

never before published. Appendices provide the first comprehensive accounting of all expedition relics recovered prior to the 2014 discovery of Franklin's ship HMS Erebus.

Avi's treasured Newbery Honor Book now in expanded After Words edition! Thirteen-year-old Charlotte Doyle is excited to return home from her school in England to her family in Rhode Island in the summer of 1832. But when the two families she was supposed to travel with mysteriously cancel their trips, Charlotte finds herself the lone passenger on a long sea voyage with a cruel captain and a mutinous crew. Worse yet, soon after stepping aboard the ship, she becomes enmeshed in a conflict between them! What begins as an eagerly anticipated ocean crossing turns into a harrowing journey, where Charlotte gains a villainous enemy . . . and is put on trial for murder! After Words material includes author Q & A, journal writing tips, and other activities that bring Charlotte's world to life!

ALLIES IN AIR POWER

Scholastic Inc.

In the past century, multinational military operations have become the norm; but while contributions from different nations provide many benefits—from expanded capability to political credibility—they also present a number of challenges. Issues such as command and control, communications, equipment standardization, intelligence, logistics, planning, tactics, and training all require consideration. Cultural factors present challenges as well, particularly when language barriers are involved. In *Allies in Air Power*, experts from around the world survey these operations from the birth of aviation to the present day. Chapters cover conflicts including World War I, multiple theaters of World War II, the Korean War, the Vietnam War, the Gulf War, Kosovo, the Iraq War, and various United Nations peacekeeping missions. Contributors also analyze the role of organizations such as the UN, NATO, and so-called "coalitions of the willing" in laying the groundwork for multinational air

operations. While multinational military action has become commonplace, there have been few detailed studies of air power cooperation over a prolonged period or across multiple conflicts. The case studies in this volume not only assess the effectiveness of multinational operations over time, but also provide vital insights into how they may be improved in the future.

National Library of Medicine Current Catalog
Routledge

Gerald K. Stone has collected books about Canadian Jewry since the early 1980s. This volume is a descriptive catalog of his Judaica collection, comprising nearly 6,000 paper or electronic documentary resources in English, French, Yiddish, and Hebrew. Logically organized, indexed, and selectively annotated, the catalog is broad in scope, covering Jewish Canadian history, biography, religion, literature, the Holocaust, antisemitism, Israel and the Middle East, and more. An introduction by Richard Menkis discusses the significance of the Catalog and collecting for the study of the Jewish experience in Canada. An informative bibliographical resource,

this book will be of interest to scholars and students of Canadian and North American Jewish studies.

Science and Judicial Reasoning Royal Collection

First multi-year cumulation covers six years: 1965-70.

Journal of the Bombay Branch of the Royal Asiatic Society

University Press of Kentucky

On the night of 22-23 April 1918 the Royal Navy carried out a raid on the German held ports of Zeebrugge and Ostend - Operation Z-O. Under the cover of clouds and smoke, over 70 ships and an assault force of 1,800 Royal Marines embarked on a daring mission which involved a vicious battle of incredible intensity. However, despite the gallant and courageous efforts of the attackers, 11 of whom were later awarded the Victoria Cross, the raid was only partly successful.

Discover the successes and failures of this dramatic raid in this in-depth account, complete with specially commissioned battlescene artwork. The author reveals how despite failure, the raid demonstrated to Germany

that Britain was still capable of offensive action, even as its armies were being forced back.

The Story of Arthur

Truluv National University of Singapore Press

Leonardo da Vinci was not only one of the leading artists of the Renaissance, he was also one of the greatest anatomists ever to have lived. He combined, to a unique degree, manual skill in dissection, analytical skill in understanding the structures he uncovered, and artistic skill in recording his results. His extraordinary campaign of dissection, conducted during the winter of 1510-11 and concentrating on the muscles and bones of the human skeleton, was recorded on the pages of a manuscript now in the Print Room of the Royal Library at Windsor Castle. These are arguably the finest anatomical drawings ever made and are extensively annotated in Leonardo's distinctive "mirror-writing", with explanations of the drawings, notes on related anatomical matters, memoranda and so on. This publication reproduces the entire manuscript, and for the first time translates all of

Leonardo's copious notes on the page so that the unfolding of his thoughts may readily be followed.

Twentieth Century

Forcible Child

Transfers Cambridge

University Press

The Holocaust,

Corporations, and the Law

explores the challenge

posed by the Holocaust to

legal and political thought

by examining issues

raised by the restitution

class action suits brought

against Swiss banks and

German corporations

before American federal

courts in the 1990s.

Although the suits were

settled for unprecedented

amounts of money, the

defendants did not

formally assume any legal

responsibility. Thus, the

lawsuits were bitterly

criticized by lawyers for

betraying justice and by

historians for distorting

history. Leora Bilsky

argues class action

litigation and settlement

offer a mode of

accountability well suited

to addressing the

bureaucratic nature of

business involvement in

atrocities. Prior to these

lawsuits, legal treatment

of the Holocaust was

dominated by criminal law

and its individualistic

assumptions, consistently

failing to relate to the

structural aspects of Nazi

crimes. Engaging critically

with contemporary

debates about corporate

responsibility for human

rights violations and

assumptions about "law,"

she argues for the need to

design processes that

make multinational

corporations accountable,

and examines the

implications for

transitional justice, the

relationship between law

and history, and for

community and

representation in a post-

national world. Her novel

interpretation of the

restitution lawsuits not

only adds an important

dimension to the study of

Holocaust trials, but also

makes an innovative

contribution to broader

and pressing

contemporary legal and

political debates. In an era

when corporations are

ever more powerful and

international, Bilsky's

arguments will attract

attention beyond those

interested in the

Holocaust and its long

shadow.

EVERYTHING WORTHY OF OBSERVATION

The Poppy

Container Molecules and

Their Guests deals with

the fundamental

principles and objectives

that govern this rapidly

developing subject and

illustrates the emergence

of a new field of

biomimetic chemistry. The

book demonstrates how a

number of techniques,

such as molecular

modelling, synthesis,

crystal structure, NMR

solution structure and

mass spectral structure

determinations can be

combined to develop a

new branch of organic

chemistry. It discusses the

chemistry of completely

new families of complexes

- the carceplexes,

hemicarceplexes and

velcraplexes - and reviews

for the first time the uses

of the interiors of

hemicarceplexes as a new

phase for carrying out

chemical reactions and for

protecting unstable

species. Furthermore, it

illustrates how

complexation and

decomplexation rates are

measured to provide free

energies of binding,

discusses new

phenomena such as

constrictive binding, and

shows how solvophobic

forces drive complexation

in a variety of organic

solvents. It also covers

catalysis through

complexation and chiral

recognition in catalysis,

both secondary themes of

this volume. Container

Molecules and Their

Guests will provide

stimulating reading for

researchers, post-graduate students and teachers involved in bio-organic chemistry, organic chemistry, materials science, and medicinal and pharmaceutical chemistry.

THE HOLOCAUST, CORPORATIONS, AND THE LAW

Royal Society of Chemistry
 Malay seals originate from those parts of maritime Southeast Asia long connected by political, economic, and cultural networks; the lingua franca of the Malay language; and the faith of Islam. Seals make up an important element in the manuscript and literary culture of the region. Defined as seals from Southeast Asia or used by Southeast Asians, with inscriptions in Arabic script, Malay seals constitute a treasure trove of data that can throw light on myriad aspects of the history of the Malay world, ranging from the nature of kingship, the administrative structure of states, the biographies of major personalities and the form of Islamic thought embraced, as well as on developments

in the art and material culture of the region. This important reference work describes and analyses the Malay sealing tradition, carefully cataloguing more than 2,000 seals sourced from collections worldwide, primarily seal impressions stamped in lampblack, ink, or wax on manuscript letters, treaties, and other documents, but including some seal matrices made of silver, brass, or stone. These Malay seals originate from the present-day territories of Malaysia, Brunei, Singapore, and Indonesia as well as the southern parts of Thailand and Cambodia, and the Philippines, and date from the second half of the sixteenth century to the early twentieth century. Complete transcriptions and translations of the Jawi inscriptions are provided, bringing the seals to light as objects of literary and art historical analysis, and key resources for an understanding of the Malay Islamic world of Southeast Asia in the early modern period. *Current Catalog* State University of New York Press
 The Royal Society came into being in late November 1660, intended

for the promoting of experimental learning. This its members proposed to do by means of weekly meetings in which there should be discussion, accounts of experiments or presentation of papers, and performances of experiments. In almost every way its aims and functions were the very opposite of academic bookishness, its intention being that members should accept nothing as true but what they could see and touch. Yet within a few months Fellows were expressing their need for a library which has been maintained from the Society's earliest years.

University of Michigan Press

Time's 'Man of the Century', Albert Einstein is the unquestioned founder of modern physics. His theory of relativity is the most important scientific idea of the modern era. In this short book Einstein explains, using the minimum of mathematical terms, the basic ideas and principles of the theory which has shaped the world we live in today. Unsurpassed by any subsequent books on relativity, this remains the most popular and useful

exposition of Einstein's immense contribution to human knowledge.
