How far will an ounce of prevention really go?  
While the answer to that question may never be truly known, Process

Plants: A Handbook for Inherently Safer Design, Second Edition takes us several steps closer. The book demonstrates not just the importance of prevention, but the importance of designing with prevention in mind. It emphasizes the role

This successful text puts personality back into the personality course, integrating the classic insights of the personality theorists with modern research in a manner that will fascinate and captive

students. Organized around eight basic aspects of personality-psychoanalytic, ego, biological, behaviorist, cognitive, trait, humanistic, and situational/interactionist-the text both explains the classic theories and also explores how the information applies to the student reader. The text presents a balanced, critical, yet optimistic approach. Personality encourages critical thinking about human nature. While holding the highest scientific

standards, the text uses unique and provocative pedagogical devices (see below) to capture students' interest and bring the field of personality to life. It has been hailed as the best-written and most relevant personality textbook in the field.

Offshore Mechanics: Structural and Fluid Dynamics for Recent Applications is a textbook which covers theoretical concepts in offshore

mechanics with consideration to new applications. Whereas most of the books currently available in the field of offshore mechanics use traditional oil, gas, and ship industry examples in order to explain the fundamentals in offshore mechanics, this book uses more recent applications including offshore wind farms, ocean energy devices, aquaculture, floating bridges and submerged tunnels. Offshore Mechanics: Structural and Fluid

Dynamics for Recent Applications covers traditional and more recent methodologies used in offshore structure modelling (including SPH and Hydro-elasticity models). It examines numerical techniques, including computational fluid dynamics and finite element method and includes easy to understand examples.

specialized expertise in the negotiation and development of airport property or the resources to hire consultants. ACRP Research Report 213 provides airport management, policymakers, and staff a resource for developing and leasing airport land and improvements, methodologies for determining market value and appropriate rents, and best practices for negotiating and re-evaluating current lease agreements. There are many factors that can go

into the analysis, and this report reviews best practices in property development."--Foreword.

Running for public office in postwar Japan requires the endorsement of a political party and a sophisticated system of

organizational support. In this volume, Gerald L. Curtis provides a detailed case study of the campaign of Sato Bunsei, who in 1967 ran for the Lower House of Japan's parliament as a nonincumbent candidate of the ruling Liberal Democratic Party. Sato's district consisted of a modern urban center and a tradition-bound rural hinterland and featured a dynamic dialectic between old and new patterns of electioneering, which led Sat? to innovate new strategies and

techniques. Since its publication in 1971, sociologists and anthropologists as well as political scientists have considered Curtis's microanalysis of Japan's political system to be a vital historical document, offering insights into Japanese social behavior and political organization that are still relevant. The Japanese edition of Curtis's pioneering study, *Daigishi No Tanjo*, a best-seller, is valued today as a classic and read and cited by journalists, politicians, and scholars

alike. This edition features a new introduction in which the author reflects on the reception of his book and on the changes in Japan's election process since its publication.

This second edition of Erica Weintraub Austin and Bruce E. Pinkleton's popular text, *Strategic Public Relations Management*, helps readers move from a tactical public relations approach to a strategic management style. Building on the first edition, it demonstrates skillful use of research and planning techniques, providing updated research methods that make use of the Internet

and programs aiding data entry and analysis. This version also expands its focus to communication program planning more broadly. Chapters in the book cover such critical topics as: \*creating a framework for planning; \*identifying the elements of a campaign; \*determining research needs and developing the research plan; \*gathering useful data for strategic guidance; \*making research decisions; and \*applying theory to professional practice. This book is valuable as a text

in public relations management and communication campaigns courses, while also serving as a reference for practitioners. It introduces readers to the tools necessary for developing and presenting comprehensive, effective, and accountable public relations plans, ensuring they are well prepared for managing and executing communication campaigns.

As a result of the world

class university rankings, many governments adopt public incentives and sanctions to push universities to excel. Above all, the better faculty research publication in SSCI and SCI journals, the more resources and social prestige universities will obtain. This timely book attempts to relate these dilemmas in Taiwan to many non-English speaking counterparts which also struggle with the worldwide SSCI syndrome. As Taiwan's higher education system,

similar to that of some other countries, has been recently devastated by the SSCI-based quantitative evaluations of academic performance in terms of its adverse impacts on the balances between teaching vs. research; qualitative vs. quantitative evaluations; globally oriented, English vs. locally oriented, non-English publications; and publications in academic journals vs. books, The SSCI Syndrome in Higher Education is a long overdue study that offers a systematic,

comprehensive coverage of the above-mentioned SSCI syndrome on the dynamics of Taiwan's academe. This book definitely helps fill an important gap in the literature on Taiwan's higher education system. Tsung Chi Professor of Politics, Occidental College, USA Prudence Chou's book addresses an academy on crisis caused by the ceaseless hype over university rankings. It further confirms that who comes out on top depends on who is doing the ranking. To save the

heart and soul out of the Taiwanese academy, this book makes a cogent argument for culturally-responsive research in the social sciences and humanities. Gerard A. Postiglione Professor and Head, Division of Policy, Administration and Social Sciences Director, Wah Ching Center of Research on Education in China, The University of Hong Kong A spectre is haunting almost all universities in the world, including Taiwan — the spectre of "indexization." Academics, particularly

social scientists are panting from the pressure of globally spread neoliberal ideology and market-based principles. Collegiality on campus in the good old days has declined, and managerialism gained power instead. Competitive funding and university rankings are excessively emphasized, and research results are required to be internationalized, i.e., published in English. Although this book is a case study of so-called SSCI syndrome in Taiwan,

the problems and challenges as well as prescription contained here are common to all academics, especially those in the non-English speaking countries positioned as “peripheral.” Yutaka Otsuka Professor of Hiroshima University, President of Japan Comparative Education Society The danger with SSCI syndrome is that it encourages social studies in nonwestern societies to dissociate themselves from local contexts, reflecting a particular

view of what is claimed to be ‘universal’ that is informed only by the Western (especially English-speaking) world. It raises the question of what counts as ‘scholarship’ and defines what knowledge is and who may claim competence in it. This volume serves us well as a timely reminder of such a great danger.  The first part of the book

is a revised edition of To Rome and Beyond, self published in 1981 by Colonel John E. Krebs. The purpose was to have a combat battle record of B Company 760th Tank Battalion. The book was to be ready for the 1981 reunion in Denver, Colorado and was presented with great success although only 200 copies were available, orders were taken and more than 7000 copies were sold. At the Denver reunion the decision was made for the veteran members to begin

gathering stories about their battle memories. Over the next several years the stories came in and Our Story of the 760th Tank Battalion WWII took shape. Colonel Helmuth Froeschle who was the last Battlion Commander as well as the Battlion Historian began putting Our Story together. The story was completed in 13 chapters in 2002, as I predicted previously, we now have a complete history of the 760th Tank Battalion. General Mark W. Clark wrote, "Your 760th Tank

Battalion made a fine record for itself". Colonel Froeschle and I agreed these stories should be adapted and published in a book titled "To Rome and Beyond with Our Story of the 760th Tank Battalion WWII" This book is the factual account of firece fire fights with Tiger Tanks and the dreaded 88MM gun, daring patrols into enemy territory, momentary capture by German Soldiers during an artillery shelling, the anguish and sorrow of a comrade's death, the destruction of battle and

the discomfort of the Italian winters with freezing rain and snow that turned battle terrain into a sea of mud.

The need for this book has arisen from demand for a current text from our students in Petroleum Engineering at Imperial College and from post-experience Short Course students. It is, however, hoped that the material will also be of more general use to practising

petroleum engineers and those wishing for an introduction into the specialist literature. The book is arranged to provide both background and overview into many facets of petroleum engineering, particularly as practised in the offshore environments of North West Europe. The material is largely based on the authors' experience as teachers and consultants and is supplemented by worked problems where they are believed to enhance understanding. The

authors would like to express their sincere thanks and appreciation to all the people who have helped in the preparation of this book by technical comment and discussion and by giving permission to reproduce material. In particular we would like to thank our present colleagues and students at Imperial College and at ERC Energy Resource Consultants Ltd. for their stimulating company, Jill and Janel for typing seemingly endless manuscripts; Dan Smith at Graham and Trotman

Ltd. for his perseverance and optimism; and Lesley and Joan for believing that one day things would return to normality. John S. Archer and Colin G. Wall 1986 ix Foreword Petroleum engineering has developed as an area of study only over the present century. It now provides the technical basis for the exploitation of petroleum fluids in subsurface sedimentary rock reservoirs.

The main emphasis of this volume is on Continuum Mechanics. The 27 contributions written by established authorities in the field of marine vehicle dynamics cover topics relating to the environment, the mechanics associated with the interface, hydroelasticity, linear and non-linear dynamics problems with reference to chaos theory, experimental techniques and other methods of

validation of software. The papers in this volume will provide a useful reference on the implications of new technologies in relation to the dynamics of ships and offshore structures.

The Rajputs ruled the vast majority of the kingdoms that were joined together after Indian independence to form the state of Rajasthan, "Land of

Kings." An important part of Rajput religion is the worship of "heroes" who have died in battle. This practice has attained new significance in recent years, as right-wing Hindu activists have deployed narratives about heroism in Rajput wars with Muslim emperors. In this book, Lindsey Harlan explores the idea of the Rajput hero. She is particularly interested in the role played by gender in stories about heroes and in their worship. She looks at the differences between female and male

storytellers, the relationships of the hero to the women in his tale, and the relationship of the hero to the goddess for whom he is both sacrifice and henchman. She obtains her materials from interviews with Rajput families and their servants, from songfests, from bystanders at shrines, from ritual specialists. Ultimately she shows how heroic traditions encapsulate and express ideals of perfection and masculinity, defined most visibly against the

backdrop of domesticity and femininity. More broadly she argues that heroes reflect ever-changing valuations of history, and serve as sources of inspiration for facing contemporary challenges (domestic, communal, national) and concerns about the future.
