Automotive Technician Training is the definitive student textbook for automotive engineering. It covers all the theory and technology sections that students need to learn in order to pass levels 1, 2 and 3 automotive courses. It is recommended by the Institute of the Motor Industry and is ideal for courses and exams run by other awarding bodies. This revised edition overhauls the coverage of general skills and advanced diagnostic techniques. It also

includes a new chapter about electric and hybrid vehicles and advanced driver-assistance systems, along with new online learning activities. Unlike current textbooks on the market, this takes a blended-learning approach, using interactive features that make learning more enjoyable and effective. It is ideal to use on its own but when linked with IMI eLearning online resources, it provides a comprehensive package that includes activities, video footage, assessments and further reading. Information and activities are set out in sequence to meet teacher and learner needs, as well as qualification requirements.

The chaise-longue by Le Corbusier, the radio by Rams, the chair by Eames – designers make things into cult objects and become icons themselves. But who knows which coupé was designed by Frua, which limousine by Engel, which station wagon by Opron? For a long time, car design was considered to be anonymous, the designers stood in the shadow of the perception of the design, even though their designs can be found on the roads in millions. This richly illustrated book captures the origin of a profession and maps the development of car design based on a comprehensive introduction and the career biographies of over 200 selected designers who contributed to the design of cars and

many different associated products in the USA, Europe, and Japan between 1900 and 2000.
