THE BIG PROBLEM AND BIGGER PROMISE OF WORKING FROM HOME

University of Chicago Press

“If you read only one book on educating children, this should be the book.... With a warm, informative voice, Bauer gives you the knowledge that will help you flex the educational model to meet the needs of your child.” —San Francisco Book Review Our K-12 school system isn’t a good fit for all—or even

most—students. It prioritizes a single way of understanding the world over all others, pushes children into a rigid set of grades with little regard for individual maturity, and slaps “disability” labels on differences in learning style. Caught in this system, far too many young learners end up discouraged. This informed, compassionate, and practical guidebook will show you how to take control of your child’s K-12 experience and negotiate the school system in a way that nurtures your child’s mind, emotions, and spirit. Understand why we have twelve grades, and why we match them to ages. Evaluate your child’s maturity, and determine how to use that knowledge to your advantage. Find out what subject areas we study in school, why they exist—and how to tinker with them.

Discover what learning disabilities and intellectual giftedness are, how they can overlap, how to recognize them, and how those labels can help (or hinder) you. Work effectively with your child's teachers, tutors, and coaches. Learn to teach important subjects yourself. Challenge accepted ideas about homework and standardized testing. Help your child develop a vision for the future. Reclaim your families' priorities (including time for eating together, playing, imagining, traveling, and, yes, sleeping!). Plan for college—or apprenticeships. Consider out-of-the-box alternatives.

Rethinking Knowledge Now That the Facts Aren't the Facts, Experts Are Everywhere, and the Smartest Person in the Room Is the Room Rethinking

Schools

Asserts that 250 years ago, some parts of the world began to experience sustained progress, opening up gaps and setting the stage for today's hugely unequal world and examines the United States, a nation that has prospered but is today experiencing slower growth and increasing inequality.

RETHINKING INEQUALITY AND HOW WE EARN

Apress

Presents lessons and activities covering the topics of social justice and globalization.

Looking for the Good War

Independently Published

Paid work is absolutely central to the culture and politics of capitalist societies,

yet today's work-centred world is becoming increasingly hostile to the human need for autonomy, spontaneity and community. The grim reality of a society in which some are overworked, whilst others are condemned to intermittent work and unemployment, is progressively more difficult to tolerate. In this thought-provoking book, David Frayne questions the central place of work in mainstream political visions of the future, laying bare the ways in which economic demands colonise our lives and priorities. Drawing on his original research into the lives of people who are actively resisting nine-to-five employment, Frayne asks what motivates these people to disconnect from work, whether or not their resistance is futile, and whether they

might have the capacity to inspire an alternative form of development, based on a reduction and social redistribution of work. A crucial dissection of the work-centred nature of modern society and emerging resistance to it, *The Refusal of Work* is a bold call for a more humane and sustainable vision of social progress. **Rethinking Risk** Greenleaf Book Group Teaching is a lifelong challenge, but the first few years in the classroom are typically a teacher's hardest. This expanded collection of writings and reflections offers practical guidance on how to navigate the school system, form rewarding relationships with colleagues, and connect in meaningful ways with students and families from all cultures and backgrounds.

WHOLE

Princeton University Press

“A highly personal, richly informed and culturally wide-ranging meditation on the loss of meaning in our times and on pathways to rediscovering it.” —Gabor Maté, MD, author of *In The Realm of Hungry Ghosts: Close Encounters With Addiction* A neuroanthropologist maps out a revolutionary new practice—Hedonic Engineering—that combines the best of neuroscience and optimal psychology. It’s an intensive program of breathing, movement, and sexuality that mends trauma, heightens inspiration and tightens connections—helping us wake up, grow up, and show up for a world that needs us all. This is a book about a big idea.

And the idea is this: Slowly over the past few decades, and now suddenly, all at once, we’re suffering from a collapse in Meaning. Fundamentalism and nihilism are filling that vacuum, with consequences that affect us all. In a world that needs us at our best, diseases of despair, tribalism, and disaster fatigue are leaving us at our worst. It’s vital that we regain control of the stories we’re telling because they are shaping the future we’re creating. To do that, we have to remember our deepest inspiration, heal our pain and apathy, and connect to each other like never before. If we can do that, we’ve got a shot at solving the big problems we face. And if we can’t? Well, the dustbin of history has swallowed civilizations older and fancier than ours. This book is

divided into three parts. The first, *Choose Your Own Apocalypse*, takes a look at our current Meaning Crisis--where we are today, why it's so hard to make sense of the world, what might be coming next, and what to do about it. It also makes a case that many of our efforts to cope, whether anxiety and denial, or tribalism and identity politics, are likely making things worse. The middle section, *The Alchemist Cookbook*, applies the creative firm IDEO's design thinking to the Meaning Crisis. This is where the book gets hands on--taking a look at the strongest evolutionary drivers that can bring about inspiration, healing, and connection. From breathing, to movement, sexuality, music, and substances--these are the everyday tools to help us wake up, grow up, and

show up. AKA--how to blow yourself sky high with household materials. And the best part? They're accessible, by anyone anywhere, no middleman required. Transcendence democratized. The final third of the book, *Ethical Cult Building*, focuses on the tricky nature of putting these kinds of experiences into gear and into culture--because, anytime in the past when we've figured out combinations of peak states and deep healing, we've almost always ended up with problematic culty communities. Playing with fire has left a lot of people burned. This section lays out a roadmap for sparking a thousand fires around the world--each one unique and tailored to the needs and values of its participants. Think of it as an open-source toolkit for building ethical culture. In *Recapture the*

Rapture, we're taking radical research out of the extremes and applying it to the mainstream--to the broader social problem of healing, believing, and belonging. It's providing answers to the questions we face: how to replace blind faith with direct experience, how to move from broken to whole, and how to cure isolation with connection. Said even more plainly, it shows us how to revitalize our bodies, boost our creativity, rekindle our relationships, and answer once and for all the questions of why we are here and what do we do now? In a world that needs the best of us from the rest of us, this is a book that shows us how to get it done.

We Now Know University of Chicago Press

A call to action to include marginalized,

non-western communities in the continuously expanding digital revolution. In the digital age, technology has shrunk the physical world into a "global village," where we all seem to be connected as an online community as information travels to the farthest reaches of the planet with the click of a mouse. Yet while we think of platforms such as Twitter and Facebook as open and accessible to all, in reality, these are commercial entities developed primarily by and for the Western world.

Considering how new technologies increasingly shape labor, economics, and politics, these tools often reinforce the inequalities of globalization, rarely reflecting the perspectives of those at the bottom of the digital divide. This book asks us to re-consider 'whose

global village' we are shaping with the digital technology revolution today. Sharing stories of collaboration with Native Americans in California and New Mexico, revolutionaries in Egypt, communities in rural India, and others across the world, Ramesh Srinivasan urges us to re-imagine what the Internet, mobile phones, or social media platforms may look like when considered from the perspective of diverse cultures. Such collaborations can pave the way for a people-first approach toward designing and working with new technology worldwide. Whose Global Village seeks to inspire professionals, activists, and scholars alike to think about technology in a way that embraces the realities of communities too often relegated to the margins. We can then start to visualize a

world where technologies serve diverse communities rather than just the Western consumer.

RETHINKING FINANCIAL DEEPENING

Knopf

The global financial crisis experience shone a spotlight on the dangers of financial systems that have grown too big too fast. This note reexamines financial deepening, focusing on what emerging markets can learn from the advanced economy experience. It finds that gains for growth and stability from financial deepening remain large for most emerging markets, but there are limits on size and speed. When financial deepening outpaces the strength of the supervisory framework, it leads to excessive risk taking and instability.

Encouragingly, the set of regulatory reforms that promote financial depth is essentially the same as those that contribute to greater stability. Better regulation—not necessarily more regulation—thus leads to greater possibilities both for development and stability.

RETHINKING HOW TECHNOLOGY SHAPES OUR WORLD

Harvard University Press
Nigeria, despite being the African

country of greatest strategic importance to the United States, remains poorly understood. Leading expert John Campbell explains why Nigeria, projected to have the world's third-highest population by 2050, is so important to understand in a world of jihadi extremism, corruption, oil conflict, and communal violence.

Widow-Burning in India Too Big to Know Rethinking Knowledge Now That the Facts Aren't the Facts, Experts Are Everywhere, and the Smartest Person in the Room Is the Room

"At last, she arrives at the fatal end of the plank . . . and, with her hands crossed over her chest, falls straight downward, suspended for a moment in the air before being devoured by the burning pit that awaits her. . . ." This

grisly 1829 account by Pierre Dubois demonstrates the usual European response to the Hindu custom of sati—sacrificing themselves on the funeral pyres of their husbands—horror and revulsion. Yet to those of the Hindu faith, not least the sati themselves, this act signals the sati's sacredness and spiritual power. *Ashes of Immortality* attempts to see the sati through Hindu eyes, providing an extensive experiential and psychoanalytic account of ritual self-sacrifice and self-mutilation in South Asia. Based on fifteen years of fieldwork in northern India, where the state-banned practice of sati reemerged in the 1970s, as well as extensive textual analysis, Weinberger-Thomas constructs a radically new interpretation of sati. She shows that their self-immolation

transcends gender, caste and class, region and history, representing for the Hindus a path to immortality.

The Theory and Practice of Resistance to Work Island Press

#1 New York Times Bestseller “THIS.

This is the right book for right now. Yes, learning requires focus. But, unlearning and relearning requires much more—it requires choosing courage over comfort. In *Think Again*, Adam Grant weaves together research and storytelling to help us build the intellectual and emotional muscle we need to stay curious enough about the world to actually change it. I’ve never felt so hopeful about what I don’t know.”

—Brené Brown, Ph.D., #1 New York Times bestselling author of *Dare to Lead*
The bestselling author of *Give and Take*

and Originals examines the critical art of rethinking: learning to question your opinions and open other people's minds, which can position you for excellence at work and wisdom in life Intelligence is usually seen as the ability to think and learn, but in a rapidly changing world, there's another set of cognitive skills that might matter more: the ability to rethink and unlearn. In our daily lives, too many of us favor the comfort of conviction over the discomfort of doubt. We listen to opinions that make us feel good, instead of ideas that make us think hard. We see disagreement as a threat to our egos, rather than an opportunity to learn. We surround ourselves with people who agree with our conclusions, when we should be gravitating toward those who challenge

our thought process. The result is that our beliefs get brittle long before our bones. We think too much like preachers defending our sacred beliefs, prosecutors proving the other side wrong, and politicians campaigning for approval--and too little like scientists searching for truth. Intelligence is no cure, and it can even be a curse: being good at thinking can make us worse at rethinking. The brighter we are, the blinder to our own limitations we can become. Organizational psychologist Adam Grant is an expert on opening other people's minds--and our own. As Wharton's top-rated professor and the bestselling author of Originals and Give and Take, he makes it one of his guiding principles to argue like he's right but listen like he's wrong. With bold ideas

and rigorous evidence, he investigates how we can embrace the joy of being wrong, bring nuance to charged conversations, and build schools, workplaces, and communities of lifelong learners. You'll learn how an international debate champion wins arguments, a Black musician persuades white supremacists to abandon hate, a vaccine whisperer convinces concerned parents to immunize their children, and Adam has coaxed Yankees fans to root for the Red Sox. Think Again reveals that we don't have to believe everything we think or internalize everything we feel. It's an invitation to let go of views that are no longer serving us well and prize mental flexibility over foolish consistency. If knowledge is power, knowing what we don't know is wisdom.

A People's Curriculum for the Earth

NYU Press

"Highly compelling...page-turning read"
— TNC's Cool Green Science We love our pets. Dogs, cats, birds, reptiles, and other species have become an essential part of more families than ever before—in North America today, pets outnumber people. Pet owners are drawn to their animal companions through an innate desire to connect with other species. But there is a dark side to our domestic connection with animal life: the pet industry is contributing to a global conservation crisis for wildlife—often without the knowledge of pet owners. In *Unnatural Companions*, journalist Peter Christie issues a call to action for pet owners. If we hope to reverse the alarming trend of wildlife

decline, pet owners must acknowledge the pets-versus-conservation dilemma and concede that our well-fed and sheltered cats too often prey on small backyard wildlife and seemingly harmless reptiles released into the wild might be the next destructive invasive species. We want our pets to eat nutritionally healthy food, but how does the designer food we feed them impact the environment? Christie's book is a cautionary tale to responsible pet owners about why we must change the ways we love and care for our pets. It concludes with the positive message that the small changes we make at home can foster better practices within the pet industry that will ultimately benefit our pets' wild brethren.

Rethinking Thin BenBella Books

Statistical Rethinking: A Bayesian Course with Examples in R and Stan builds readers' knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to multilevel models. The author also discusses measurement

error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it prepares them for more advanced or specialized statistical modeling. Web Resource The book is accompanied by an R package (rethinking) that is available on the author's website and GitHub. The two core functions (map and map2stan) of this package allow a variety of statistical models to be constructed from standard model formulas.

THINK AGAIN

Rethinking Schools

Years have passed since the world experienced one of the worst financial crises in history, and while countless experts have analyzed it, many central questions remain unanswered. Should money creation be considered a 'public' or 'private' activity—or both? What do we mean by, and want from, financial stability? What role should regulation play? How would we design our monetary institutions if we could start from scratch? In *The Money Problem*, Morgan Ricks addresses all of these questions and more, offering a practical yet elegant blueprint for a modernized system of money and banking—one that, crucially, can be accomplished through

incremental changes to the United States' current system. He brings a critical, missing dimension to the ongoing debates over financial stability policy, arguing that the issue is primarily one of monetary system design. The Money Problem offers a way to mitigate the risk of catastrophic panic in the future, and it will expand the financial reform conversation in the United States and abroad.

Rethinking God AMACOM Div American Mgmt Assn

The 2008 financial crisis, the rise of Trumpism and the other populist movements which have followed in their wake have grown out of the frustrations of those hurt by the economic policies advocated by conventional economists for generations. Despite this, textbooks

continue to praise conventional policies such as deregulation and hyperglobalization. This textbook demonstrates how misleading it can be to apply oversimplified models of perfect competition to the real world. The math works well on college blackboards but not so well on the Main Streets of America. This volume explores the realities of oligopolies, the real impact of the minimum wage, the double-edged sword of free trade, and other ways in which powerful institutions cause distortions in the mainstream models. Bringing together the work of key scholars, such as Kahneman, Minsky, and Schumpeter, this book demonstrates how we should take into account the inefficiencies that arise due to asymmetric information, mental biases,

unequal distribution of wealth and power, and the manipulation of demand. This textbook offers students a valuable introductory text with insights into the workings of real markets not just imaginary ones formulated by blackboard economists. A must-have for students studying the principles of economics as well as micro- and macroeconomics, this textbook redresses the existing imbalance in economic teaching. Instead of clinging to an ideology that only enriched the 1%, Komlos sketches the outline of a capitalism with a human face, an economy in which people live contented lives with dignity instead of focusing on GNP.

Examines the history of the Cold War, reflecting Soviet, East European, Chinese, American, and West European viewpoints, and offering new insights and solutions to long-standing puzzles

ONE

CRC Press

The term "middle power" is conceptually fragile. Some scholars have even argued for abandoning it. This book argues that the concept needs to be analysed more profoundly and that new analytical tools need to be developed to better understand the phenomenon. The traditional approach, based on Western states, is insufficient and has become increasingly irrelevant in a transformed

global environment. Instead of drawing from a single theory of international relations, the contributors have chosen to build upon a wide range of theories in a deliberate demonstration of analytic eclecticism. A pluralistic approach provides stronger explanations while remaining analytically and intellectually rigorous. Many of the theory contributions are reconsidering how the largely "Western" bases of such theorising need revising in light of the "emerging middle powers", many of which are in Asia. Presenting a strong argument for studying middle powers, this book explores both the theory and empirical applications of the concept by rethinking the definition and characteristics of middle powers using a range of case studies. It examines

changes in the study of middle powers over the last decade, proposing to look at the concept of middle powers in a coherent and inclusive manner. Finally, it aims to further the discussion on the evolution of the international system and provides sound conclusions about the theoretical usefulness and empirical evolution of middle powers today.

TEACHING FOR JUSTICE IN AN UNJUST WORLD

International Monetary Fund
The digital revolution has hit education, with more and more classrooms plugged into the whole wired world. But are schools making the most of new technologies? Are they tapping into the learning potential of today's Firefox/Facebook/cell phone generation?

Have schools fallen through the crack of the digital divide? In *Rethinking Education in the Age of Technology*, Allan Collins and Richard Halverson argue that the knowledge revolution has transformed our jobs, our homes, our lives, and therefore must also transform our schools. Much like after the school-reform movement of the industrial revolution, our society is again poised at the edge of radical change. To keep pace with a globalized technological culture, we must rethink how we educate the next generation or America will be "left behind." This groundbreaking book offers a vision for the future of American education that goes well beyond the walls of the classroom to include online social networks, distance learning with

"anytime, anywhere" access, digital home schooling models, video-game learning environments, and more. [Too Big to Know](#) Oxford University Press Risk. It's a given factor in the operation of any organization. From corporate fraud and security issues to technological and other man-made disasters, bad things do happen. And while many businesses build elaborate defenses against these unexpected occurrences, often employing powerful technology to help detect and prevent them, most risk-assessment strategies fail to connect the dots before it's too late. This book, based on the author's extensive experience analyzing the sources of corporate and organizational failure, reveals how a company can mitigate risk using available resources,

including what may be the most important asset: its people. Readers will discover valuable strategies, enabling them to: Draw “actionable intelligence” from enormous amounts of data • Quickly make better-informed assessments and decisions • Tap into the rich human sources of information

that can directly alert them to signs of risk • Do a better job of anticipating and avoiding problems Filled with practical, real-world insight and featuring interviews with experienced risk practitioners, this book will help any business recognize the first signs of trouble.
