In this comprehensive guide to creating an e-commerce Web site using PHP and MySQL, renowned author Larry Ullman walks you through every step—designing the visual interface, creating the database, presenting content, generating an online catalog, managing the shopping cart, handling the order and the payment process, and fulfilling the order—always with security and best practices emphasized along the way. Even if you're an experienced Web developer, you're guaranteed to learn something new. In 11 engaging, easy-to-follow chapters, *Effortless E-Commerce with PHP and MySQL* teaches you how to: • Think of the customer first, in order to maximize sales • Create a safe server environment and database • Use secure transactions and prevent common vulnerabilities • Incorporate different payment gateways • Design scalable sites that are easy to maintain • Build administrative interfaces • Extend both examples to match the needs of your own sites Larry Ullman is the president of Digital Media and Communications Insights, Inc., a firm specializing in information technology (www.dmcinsights.com). He is the author of several bestselling programming and Web development books, including *PHP and MySQL for Dynamic Web Sites: Visual QuickPro Guide*. Larry also writes articles on these subjects and teaches them in small and large group settings. Despite working with computers, programming languages, databases, and such since the early 1980s, Larry still claims he's not a computer geek (but he admits he can speak their language).

This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book

has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.
