Jossey-Bass

The Age of Genius explores the eventful intertwining of outward event and inner intellectual life to tell, in all its richness

and depth, the story of the 17th century in Europe. It was a time of creativity unparalleled in history before or since, from science to the arts, from philosophy to politics. Acclaimed philosopher and historian A.C. Grayling points to three primary factors that led to the rise of vernacular (popular) languages in philosophy, theology, science, and literature; the rise of the individual as a general and not merely an aristocratic type; and the invention and application of instruments and measurement in the study of the natural world. Grayling vividly reconstructs this unprecedented era and breathes new life into the major figures of the seventeenth century intelligentsia who span literature, music, science, art, and philosophy--

Shakespeare, Monteverdi, Galileo, Rembrandt, Locke, Newton, Descartes, Vermeer, Hobbes, Milton, and Cervantes, among many more. During this century, a fundamentally new way of perceiving the world emerged as reason rose to prominence over tradition, and the rights of the individual took center stage in philosophy and politics, a paradigmatic shift that would define Western thought for centuries to come.

Nordic Gender Equality Policy in a Europeanisation Perspective African Books Collective  
This book investigates the forms that the aggression and violence of peasant elites could take in early modern Fennoscandia, and their role within society. The contributors highlight the social stratification, inner divisions, contradictions and conflicts of the peasant communities, but also pay attention to the elite as leaders of resistance against the authorities. With the formation of more centralised states, the elites' status and room for agency diminished, but regional and temporal

variations were great in this relatively drawn-out process, and there still remained several favourable contexts for their agency. Even though the peasant elite was not a homogenous entity, the chapters in this collection present us one uniting feature - the peasant elites' tendency to assert themselves with an active and aggressive agency, even if this led to very different outcomes.

*Politicizing Rape and Pornography*  
McGraw-Hill Education (UK)

This book examines how feminist movements in Norway and France have politicized rape, pornography and sexual exploitation of women from the 1970s to the present. Through a cross-national comparison, it provides insights into why the fight against rape became top priority for French feminists in the 1970s; what kind of strategies the feminist movements used when politicizing sex and violence; who the opponents of the feminist mobilizations were, and who the allies were; as well as what the feminist movements achieved and what the costs of the battles were. This book provides historical context for contemporary and contentious debates about the tension between feminism and sexual freedom, about sexual liberation and abuse, and about the limits of freedom of expression. This text is relevant for students in history, sociology, health, political science, comparative politics and interdisciplinary gender studies. It is also relevant for

researchers and activists who are concerned with the history of feminism, feminist politics and sexual politics.

In these pages, acclaimed historian David Crane gives us an astonishing, intimate snapshot of the people and places surrounding the battle that changed the course of world history. Switching perspectives between Britain and Belgium, prison and palace, poet and pauper, husband and wife, *Went the Day Well?* offers a highly original view of Waterloo, showing how the battle was not only a military landmark, but also a cultural watershed that drew the line between the rural, reactionary age of the past and the urban, innovative era to come. Lyrically rendered in Crane's signature prose style, this essential account freeze-frames the ordinary men and women of 1815 who went about their business, attended lectures, worked in fields and factories—all on the cusp of a new, unforeseeable age.

This book documents and analyses the involvement of Norway in the liberation struggle in Southern Africa. Apart from focussing on the formulation of official policies and the extensive cooperation with the liberation movements in the field of humanitarian assistance, mainly based on the Ministry of Foreign Affairs records, the study highlights the popular involvement and commitment to the struggle. Separate chapters are concerned with the churches, trade unions and solidarity movements, such as the Norwegian Council for Southern Africa and the Namibia Committee. The book also includes a case study on the battle for sanctions. The Study forms part

of the Nordic Africa Institute's research and documentation project -National Liberation in Southern Africa: The Role of the Nordic Countries-.

The benefits and importance of Socratic seminars are widely recognized, but little has been written on how to make them happen successfully in the classroom. In *Socratic Circles: Fostering Critical and Creative Thinking in Middle and High School*, author Matt Copeland provides real-world examples and straightforward answers to frequent questions. He creates a coaching guide for both the teacher new to Socratic seminars and the experienced teacher seeking to optimize the benefits of this powerful strategy. *Socratic Circles* also shows teachers who are familiar with literature circles the many ways in which these two practices complement and extend each other. Effectively implemented, Socratic seminars enhance reading comprehension, listening and speaking skills, and build better classroom community and conflict resolution skills. By giving students ownership over the classroom discussion around texts, they become more independent and motivated learners. Ultimately, because there is a direct relationship between the level of participation and the richness of the experience, Socratic seminars teach students to take responsibility for the quality of their own learning. Filled with examples to help readers visualize the application of these concepts in practice, *Socratic Circles* includes transcripts of student dialogue and work samples of preparation and follow-up activities. The helpful appendices offer ready-to-copy handouts and examples, and suggested selections of text that connect to major

literary works. As our classrooms and our schools grow increasingly focused on meeting high standards and differentiating instruction for a wide variety of student needs and learning styles, Socratic seminars offer an essential classroom tool for meeting these goals. Socratic Circles is a complete and practical guide to Socratic seminars for the busy classroom teacher.

This book examines the relationship between media and medicine, considering the fundamental role of news coverage in constructing wider cultural understandings of health and disease. The authors advance the notion of 'biomediatization' and demonstrate how health knowledge is co-produced through connections between dispersed sites and forms of expertise. The chapters offer an innovative combination of media content analysis and ethnographic data on the production and circulation of health news, drawing on work with journalists, clinicians, health officials, medical researchers, marketers, and audiences. The volume provides students and scholars with unique insight into the significance and complexity of what health news does and how it is created.

"A tour de force."—Gordon S. Wood, *New York Times Book Review* How were human rights invented, and how does their tumultuous history influence their perception and our ability to protect them today? From Professor Lynn Hunt

comes this extraordinary cultural and intellectual history, which traces the roots of human rights to the rejection of torture as a means for finding the truth. She demonstrates how ideas of human relationships portrayed in novels and art helped spread these new ideals and how human rights continue to be contested today.

The reality of the fantastic combines a 'new philological' close study of a fifteenth-century Icelandic manuscript compilation of fifteen fornaldarsögur and riddarasögur, AM 343a 4to, with an historically-based analysis of the manuscript's various contents, demonstrating how fictions that are in many respects non-realistic can be made to yield up insights into the real-world concerns and interests of a group of fifteenth-century Icelanders. Both the methodology of this study and its conclusions should interest readers from diverse fields, including literature, history and manuscript studies. This book engages with human rights and human rights education (HRE) in ways that offer opportunities for criticality and renewal. It takes up various ideas, from critical and decolonial theories to philosophers and intellectuals, to theorize the renewal of HRE as Critical Human Rights Education. The point of departure is that the acceptable "truths" of human rights are seldom critically examined, and productive interpretations for understanding and acting in a world that

is soaked in the violations these rights try to address, cannot emerge. The book cultivates a critical view of human rights in education and beyond, and revisits receivable categories of human rights to advance social-justice-oriented educational praxes. It focuses on the ways that issues of human rights, philosophy, and education come together, and how a critical project of their entanglements creates openings for rethinking human rights education (HRE) both theoretically and in praxis. Given the persistence of issues of human rights worldwide, this book will be useful to researchers and educators across disciplines and in numerous parts of the world.

The formation of states in early modern Europe has long been an important topic for historical analysis. Traditionally, the political and military struggles of kings and rulers were the favoured object of study for academic historians. This book highlights new historical research from Europe's northern frontier, bringing 'the people' back into the discussion of state politics, presenting alternative views of political and social relations in the Nordic countries before industrialisation. The early modern period was a time that witnessed initiatives from people from many groups formally excluded from political influence, operating outside the structures of central government, and this book returns to the subject of contentious politics and state building from below.

From the Introduction: We need not be surprised, then, that in the Middle Ages

also there were rulers who aspired to supreme political and temporal power. The truly exceptional thing is that in medieval times there were always at least two claimants to the role, each commanding a formidable apparatus of government, and that for century after century neither was able to dominate the other completely, so that the duality persisted, was eventually rationalized in works of political theory and ultimately built into the structure of European society. This situation profoundly influenced the development of Western constitutionalism.

Rethinking education: towards a global common good? Ib Diploma Program  
What's the problem with literacy at college? How might everyday literacy be harnessed for educational ends? Based on the first major study of literacy practices in colleges in the UK, this book explores the reading and writing associated with learning subjects across

the college curriculum. It investigates literacy practices in which students engage outside of college, and teaching and learning strategies through which these can help support the curriculum. With insightful analyses of innovative practices, it considers ways of changing teaching practices to enable students to draw upon their full potential. Recent research work has challenged the myth of individual student deficit, arguing cogently that people have 'funds of knowledge' from diverse and vibrant cultural roots, and that these have been misguidedly disqualified by the education system. It has claimed that different 'ways with words' can provide valuable resources for learning.

However, the empirical exploration of this claim has lagged far behind the theoretical debate. Improving Learning in College resolves this by showing the integrity and richness of the literacy practices of a significant population, not previously the focus of such research: those who take vocational and academic college courses in colleges. It addresses an issue which has not until now been developed within this research tradition: that of how these practices can not only be valued and validated, but mobilised and harnessed to enhance learning in educational settings. This book will interest all teachers, teacher-educators and researchers concerned with post-compulsory education and vocational education in compulsory schooling.

Curriculum as a Political Problem Berkley  
This revised edition offers college and university leaders an up-to-date analytical perspective for resolving basic academic issues. Brubacher reexamines, refines and extends earlier arguments and other key questions in response to significant new social, economic, legal and educational developments. He

discusses the limits of autonomy, the exercise of academic freedom, the desirability of open admissions, prescribed curricula and collective bargaining. He also investigates such emerging new problems as

accountability, corporate interests on campus, and the right to confidentiality; expands on ways to promote equal access and specialized education without undermining the criteria for admission.
