In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally

representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those

who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at [www.worldbank.org/globalfindex](http://www.worldbank.org/globalfindex).

International business activity is not new. The transfer of goods and services across national borders has been taking place for thousands of years, antedating even Joseph's advice to the rulers of Egypt to

establish that nation as the granary of the Middle East. Since the end of World War II, however, international business has undergone a revolution out of which has emerged what is probably the most important economic phenomenon of the latter half of the 20th century: the multinational corporation. The sixth edition of *Multinational Financial Management* provides the conceptual framework within which key financial decisions of the multinational firm can be analyzed. The emphasis throughout the book is on taking advantage of being a multinational corporation. Using real-world examples and illustrations of corporate practices,

the text demonstrates to students the value of making judgments with a solid theoretical foundation. Beyond the traditional coverage of corporate finance, key elements including multiple currency, exchange rates, differing tax systems, and political risks such as nationalization and expropriation are explored. New to This Edition  
Extensive discussion of the Asian currency crisis  
Examination of international differences in corporate governance  
Exploration of the eurocurrency

John Wiley & Sons  
This important book examines the development of soft law instruments in international investment law and the feasibility of a 'codification' of the present state of this field of international economic law. It draws together the views of international experts on the use of soft law in international law generally and in discrete fields such as WTO, commercial, and environmental law. The book assesses whether investment law has sufficiently coalesced over the last 50 years to be 'codified' and focuses particularly on topical issues such as most-favoured-nation treatment and

expropriation. This timely book will appeal to academics interested in the development of international law and legal theory, to those working in investment law, Government investment treaty negotiators and arbitration practitioners.

*International Financial Management* provides a strong foundation for

The same can be said for today's students who become the MNC managers of the future. *International Financial Management* combines a strong foundation in international finance

theory with current, practical applications. It provides thorough, up-to-date treatment of cutting-edge international finance issues along with traditional treatment of international financial management.
