Paracord was first created for use as a pull cord in World War Two parachutes, it was chosen due to its strength and durability. It could also be removed from the parachute and taken with a soldier once

they were behind enemy lines. The genuine product is known as paracord 550; the term simply describes the fact that it can handle the stress of five hundred and fifty pounds. It has at least five strands inside it which make up the cord, in fact, it is usually seven strands. The cord can retain its strength even with one or two of these strands broken! In more recent times its role as a survival aid has become increasingly commented on. Using a simple design you can make a product,

such as a keychain, which can be carried with you at all times.
