From the author of the New York Times bestseller *Prisoners of Geography*, the highly anticipated follow-up that uses ten maps of crucial regions around the globe to explain the geopolitical strategies of today's world powers and what it means

for our future. Tim Marshall's global bestseller *Prisoners of Geography* offered us a "fresh way of looking at maps" (The New York Times Book Review), showing how every nation's choices are limited by mountains, rivers, seas and concrete. Since then, the geography hasn't changed, but the world has. Now, in this revelatory new book, Marshall takes us into ten regions that are set to shape global politics and power. Find out why the Earth's atmosphere is the world's next battleground; why the fight for the Pacific is just beginning; and why Europe's next refugee crisis is closer than we think. In ten chapters covering Australia, The Sahel, Greece, Turkey, the UK, Iran, Ethiopia, Saudi Arabia, Spain and Space, Marshall explains how a region's geography and physical characteristics affect the decisions made by its leaders. Innovative, compelling, and delivered with Marshall's trademark wit and insight, this is a gripping and enlightening exploration of the power of geography to shape humanity's past, present, and—most importantly—our future.

Around 1796, Mr. Malthus, an English gentleman, had finished reading a book that confidently predicted human life would continue to grow richer, more comfortable and more secure, and that nothing could stop the march of progress. He discussed this theme with his son, Thomas, and Thomas ardently disagreed with both his father and the book he had been reading, along with the entire idea of unending human progress. Mr. Malthus suggested that he write down his objections so that they could discuss them point-by-point. Not long after, Thomas returned with a rather long essay. His father was so impressed that he urged his son to have it published. And so, in 1798, appeared *An Essay on Population*, by British political economist and demographer THOMAS ROBERT MALTHUS

(1766-1834). Though it was attacked at the time and ridiculed for many years afterward, it has remained one of the most influential works in the English language on the general checks and balances of the world's population and its necessary control. This is a replica of the 1826 sixth edition. Volume 1 includes: Book I: "Of the Checks to the Population in the Less Civilised Parts of the World and in Past Times" and Book II: "Of the Checks to the Population in the Different States of Modern Europe."

Michael Kuby's 6th edition of *Human Geography in Action* is comprised of 14 stimulating, concept-based chapters. The text aims to develop geographic problem-solving skills that prove valuable to readers. Each chapter begins with an introduction to a concept, followed by a case study tying the concept into the real world and wraps up with an activity. These engaging activities featured throughout the text further its "Do Geography" approach. *Human Geography in Action* provides the opportunity to: use GIS to

investigate ethnic distributions and culture regions, track the AIDS epidemic over space and time, model interstate migration flows, simulate India's demographic future, add new baseball franchises, animate past urban growth and assess future growth areas.

Over the next half century, the human population, divided by culture and economics and armed with weapons of mass destruction, will expand to nearly 9 billion people. Abrupt climate change may throw the global system into chaos; China will emerge as a superpower; and Islamic terrorism and insurgency will threaten vital American interests. How can we understand these and other global challenges? Harm de Blij has a simple answer: by improving our understanding of the world's geography. In *Why Geography Matters*, de Blij demonstrates how geography's perspectives yield unique and penetrating insights into the interconnections that mark our shrinking world. Preparing for climate change, averting a cold war with China, defeating terrorism: all of this requires geographic knowledge. De Blij also makes an urgent call to restore geography to America's educational curriculum. He shows how

and why the U.S. has become the world's most geographically illiterate society of consequence, and demonstrates the great risk this poses to America's national security. Peppering his writing with anecdotes from his own professional travels, de Blij provides an original treatise that is as engaging as it is eye opening. Casual or professional readers in areas such as education, politics, or national security will find themselves with a stimulating new perspective on geography as it continues to affect our world.

Rediscovering Geography

Oxford University Press
Two young boys encounter the best and worst of humanity during the Holocaust in this powerful read that USA Today called "as memorable an introduction to the subject as *The Diary of Anne Frank*." Berlin, 1942: When Bruno returns home from school one day, he discovers that his belongings are being packed in crates. His father has received a promotion and the family must move to a new house far, far away, where there is no one to play with and nothing to

do. A tall fence stretches as far as the eye can see and cuts him off from the strange people in the distance. But Bruno longs to be an explorer and decides that there must be more to this desolate new place than meets the eye. While exploring his new environment, he meets another boy whose life and circumstances are very different from his own, and their meeting results in a friendship that has devastating consequences.
