## AVOIDING SURPRISE IN AN ERA OF GLOBAL TECHNOLOGY ADVANCES

Createspace Independent Publishing Platform

While written under the auspices of the Trustees of the Military Intelligence Museum, *Sharing the Secret* is not an academic regimental history. Rather it gives a privileged glimpse into a necessarily publicity-shy organization that has been deeply involved in military intelligence operations since its inception in 1940 through to 2010. Understandably, little has been written about the Corps' work for Official Secret reasons.??The development of Field Security and Protective Security and measures taken to protect the Army for espionage, sabotage, subversion and terrorism in peace and war are examined. These tasks were particularly important during the de-Nazification of Germany during the

aftermath of the Second World War. Field Security led to the successful arrest of leading Nazis, including Himmler and Doenitz.??The author, who served in the Corps for over 20 years and saw active service in Northern Ireland and the Falklands, gives fascinating examples of differing Intelligence techniques in action. These include the exploitation of Imagery Interpretation, Human Intelligence, including the interrogation of prisoners of war, the examination of enemy documents and the deployment of Signals Intelligence so that commanders have enough information to fight the battles. The support the Intelligence Corps gave to the Special Operations Executive during the Second World War is well covered, as are examples of Special Duties since 1945.??The reader will appreciate that, as with any work relating to national intelligence and security, *Sharing the Secret* has been written under the restrictions of the era. That said, it provides a long-overdue insight into the contribution of members of the Intelligence Corps over seventy years of

war and peace.??As featured in Burnham & Highbridge News

### Combat Vehicle Active Protection Systems

Countering the Threat of Improvised Explosive Devices

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and

middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

### **THE ARAB-U.S. STRATEGIC PARTNERSHIP AND THE CHANGING SECURITY BALANCE IN THE GULF**

United Nations

Presents professional information designed to keep Army engineers informed of current and emerging developments within their areas of expertise for the purpose of enhancing their professional development. Articles cover engineer training, doctrine, operations, strategy, equipment, history, and other areas of interest to the engineering community.

*Operation Iraqi Freedom and Operation Enduring Freedom Ground Forces Vehicle and Personnel Protection and Rotary Wing Safety of Flight Update* National Academies Press

This new report from the CSIS Burke Chair in Strategy provides a 2015 assessment of the Gulf military balance, the military capabilities of each Gulf state, the role of the United States as a security partner, and the priorities for change in the structure of both the Gulf Cooperation Council and the Arab Gulf military partnership with the United States.

*The Engineer Pen and Sword*

The United Nations Disarmament Yearbook, volume 40 (Part II): 2015, with a foreword by the High Representative for Disarmament Affairs, summarizes developments and trends in 2015 on key issues of multilateral consideration at the international and regional levels; reviews the activity of the General Assembly, the Conference on Disarmament and the Disarmament Commission; and contains a handy timeline of highlights of multilateral disarmament in 2015.

*United Nations Disarmament Yearbook 2016. Part I* Rowman & Littlefield

Improvised explosive devices (IEDs) are a type of unconventional explosive weapon that can be deployed in a variety of ways, and can cause loss of life, injury, and property damage in both military and civilian environments. Terrorists, violent extremists, and criminals often choose IEDs because the ingredients, components, and instructions required to make IEDs are highly accessible. In many cases, precursor chemicals enable this

criminal use of IEDs because they are used in the manufacture of homemade explosives (HMEs), which are often used as a component of IEDs. Many precursor chemicals are frequently used in industrial manufacturing and may be available as commercial products for personal use. Guides for making HMEs and instructions for constructing IEDs are widely available and can be easily found on the internet. Other countries restrict access to precursor chemicals in an effort to reduce the opportunity for HMEs to be used in IEDs. Although IED attacks have been less frequent in the United States than in other countries, IEDs remain a persistent domestic threat. Restricting access to precursor chemicals might contribute to reducing the threat of IED attacks and in turn prevent potentially devastating bombings, save lives, and reduce financial impacts. Reducing the Threat of Improvised Explosive Device Attacks by Restricting Access to Explosive Precursor Chemicals prioritizes precursor chemicals that can be used to make HMEs and analyzes the movement of those chemicals through United States commercial supply chains and identifies potential vulnerabilities. This report examines current United States and international regulation of the chemicals, and compares the economic, security, and other tradeoffs among potential control strategies.

**NATO** John Wiley & Sons

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems

and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

*Countering the Threat of Improvised Explosive Devices* United Nations

Countering the threat of improvised explosive devices (IED)s is a challenging, multilayered problem. The IED itself is just the most publicly visible part of an underlying campaign of violence, the IED threat chain. Improving the technical ability to detect the device is a primary objective, but understanding of the goals of the adversary; its sources of materiel, personnel, and money; the sociopolitical environment in which it operates; and other factors, such as the cultural mores that it must observe or override for support, may also be critical for impeding or halting the effective use of IEDs.

*Disrupting Improvised Explosive Device Terror Campaigns* focuses on the human dimension of terror campaigns and also on improving the ability to predict these activities using collected and interpreted data from a variety of sources. A follow-up to the 2007 book, *Countering the Threat of Improvised Explosive Devices: Basic Research Opportunities*, this book summarizes two workshops held in 2008.

**United Nations Disarmament Yearbook 2019: Part II** National Academies Press

This volume illustrates and describes all known anti-personnel landmines that have been produced, are available or have been used in battlefields and areas of conflict worldwide. It should be of interest to both military and civilian mine-clearance specialists.

*Department of Defense Authorization for Appropriations for Fiscal Year 2007* National Academies Press

International anti-terrorism measures existed long before 11 September 2001 but have increased markedly since. A myriad of norms in different branches of law are now deployed to confront transnational and domestic terrorism. There is also a proliferating body of 'soft law' addressing terrorism, stemming from United Nations organs, specialised international bodies and regional organisations. It is timely to draw together these diverse legal developments over time into a single reference work. Bringing the original documents together provides for ease of reference and enables

scholars, practitioners and students to more easily compare and contrast various sources. The book's coverage is comprehensive (thematically, organisationally, geographically and temporally) and open to a balance of sources (hard and soft), but is judicious in its selection and prioritisation of the most significant and representative documents - in a field where there are many repetitive or insubstantial documents. Importantly, the book looks beyond the traditional trans-Atlantic bias towards European, British and American sources in this area to include materials from Asia, Africa, Latin America and the Middle East. Taken as a whole, the book aids in evidencing the emerging field of international anti-terrorism law.

**Sharing the Secret** Edward Elgar Publishing

This volume provides specialized insights into selected Mediterranean geographies, such as info-communication technologies, tourism, urbanization and climate change threats, with a focus on emerging and often overlooked issues, in light of the impact of current trends of globalization and the financial 'crisis', in the broader context of contemporary world processes of environmental change and accelerated human mobility. Specifically, the book contains sections on emergent and increasingly significant or highly innovative issues specific to the Mediterranean, often providing alternative perspectives on various pressing issues, such as the northward shift of climatic types; littoralisation processes and urbanization trends; tourism growth problems; human exposure to environmental stresses; and the boom in info-communication technologies. As such this book provides new insights into a region that has absorbed the sustained impact of human growth in precarious environments, often at the interface of many worlds, co-existing at various states of development and inter-scalar or cross-border interrelationships. This volume does not cover every aspect of the human and physical geographies of the Mediterranean region, but rather addresses contemporary issues of increasing significance to the Mediterranean, with an emphasis on emergent and pressing issues, as well as new perspectives or methods of approach, of special relevance to the Mediterranean. The core of contributions to this volume originated from an initiative undertaken by the International Geographical Union (IGU) Mediterranean Renaissance Program, now the Commission on the Mediterranean Basin (COMB). Most papers are authored

by members of the latter Commission and additional papers are included, in order to cover more aspects of contemporary Mediterranean geographies.

### TERRORISM

Cambridge Scholars Publishing

This publication summarizes developments and trends in 2019 on key issues of multilateral consideration at the international and regional levels. It reviews the activity of the General Assembly, the Conference on Disarmament and the Disarmament Commission. It contains a timeline that highlights events in multilateral disarmament in 2019. Comprises a foreword written by the High Representative for Disarmament Affairs. Department of Defense Appropriations for 2008: Walter Reed infrastructure ... pt. 3. Navy and Marine Corps force posture and acquisition overview Springer

The volume 41 (Part I) compiles the disarmament resolutions and decisions of the Seventy-first session of the General Assembly, the voting patterns in the General Assembly and the First Committee report and dates of their adoption. Department of Defense Authorization for Appropriations for Fiscal Year 2013 and the Future Years Defense Program: Emerging threats and capabilities National Academies Press

The volume 40 (Part I) compiles the disarmament resolutions and decisions of the seventieth session of the General Assembly, the voting patterns in the General Assembly and the First Committee report and dates of their adoption.

### Defeating the Improvised Explosive Device led and Other Asymmetric Threats

United Nations  
Countering the Threat of Improvised Explosive Devices  
National Academies Press

### HANDBOOK ON THE EUROPEAN UNION AND BREXIT

National Academies Press

The global spread of science and technology expertise and the growing commercial access to advanced technologies with possible military application are creating potentially serious threats to the technological superiority underpinning U.S. military strength. Key to dealing with this situation is the ability of the U.S. intelligence community to be able to provide adequate and effective warning of evolving, critical technologies. To assist in performing this task, the Technology Warning Division of the Defense Intelligence Agency (DIA) asked the National Research Council (NRC) to

undertake a study examining technology warning issues. This report provides the first part of that study. It presents an assessment of critical, evolving technologies; postulates ways potential adversaries could disrupt these technologies; and provides indicators for the intelligence community to determine if such methods are under development. The intention of this report is to establish the foundation for a long-term relationship with the technology warning community to support the examination of technology warning issues.

### DISRUPTING IMPROVISED EXPLOSIVE DEVICE TERROR CAMPAIGNS

Potomac Books

The United Nations Disarmament Yearbook, volume 41 (Part II): 2016, with a foreword by the High Representative for Disarmament Affairs, summarizes developments and trends in 2016 on key issues of multilateral consideration at the international and regional levels; reviews the activity of the General Assembly, the Conference on Disarmament and the Disarmament Commission; and contains a handy timeline of highlights of multilateral disarmament in 2016.

### Science and Technology to Counter Terrorism

United Nations  
This Congressionally-mandated report identifies areas for further cooperation with Russia and other states of the former Soviet Union under the Cooperative Threat Reduction (CTR) program of the Department of Defense in the specific area of prevention of proliferation of biological weapons. The report reviews relevant U.S. government programs, and particularly the CTR program, and identifies approaches for overcoming obstacles to cooperation and for increasing the long-term impact of the program. It recommends strong support for continuation of the CTR program.

### NEXT GENERATION BORDER AND MARITIME SECURITY TECHNOLOGIES

Bloomsbury Publishing

Attacks in London, Madrid, Bali, Oklahoma City and other places indicate that improvised explosive devices (IEDs) are among the weapons of choice of terrorists throughout the world. Scientists and engineers have developed various technologies that have been used to counter individual IED attacks, but events in Iraq and elsewhere indicate that the effectiveness of IEDs as weapons of asymmetric warfare remains. The Office of Naval Research has asked The National Research Council to examine the current state of knowledge and practice in the

prevention, detection, and mitigation of the effects of IEDs and make recommendations for avenues of research toward the goal of making these devices an ineffective tool of asymmetric warfare. The book includes recommendations such as identifying the most important and most vulnerable elements in the chain of events leading up to an IED attack, determining how resources can be controlled in order to prevent the construction of IEDs, new analytical methods and data modeling to predict the ever-changing behavior of insurgents/terrorists, a deeper understanding of social divisions in societies, enhanced capabilities for persistent surveillance, and improved IED detection capabilities.

### **PARLIAMENTARY DEBATES (HANSARD).**

United Nations  
Vulnerabilities abound in U.S. society. The openness and efficiency of our key

infrastructures " transportation, information and telecommunications systems, health systems, the electric power grid, emergency response units, food and water supplies, and others " make them susceptible to terrorist attacks. Making the Nation Safer discusses technical approaches to mitigating these vulnerabilities. A broad range of topics are covered in this book, including: Nuclear and radiological threats, such as improvised nuclear devices and "dirty bombs;" Bioterrorism, medical research, agricultural systems and public health; Toxic chemicals and explosive materials; Information technology, such as communications systems, data management, cyber attacks, and identification and authentication systems; Energy systems, such as the electrical power grid and oil and natural gas systems; Transportation systems; Cities and fixed infrastructures, such as buildings, emergency operations centers, and tunnels; The response of people to

terrorism, such as how quality of life and morale of the population can be a target of terrorists and how people respond to terrorist attacks; and Linked infrastructures, i.e. the vulnerabilities that result from the interdependencies of key systems. In each of these areas, there are recommendations on how to immediately apply existing knowledge and technology to make the nation safer and on starting research and development programs that could produce innovations that will strengthen key systems and protect us against future threats. The book also discusses issues affecting the government's ability to carry out the necessary science and engineering programs and the important role of industry, universities, and states, counties, and cities in homeland security efforts. A long term commitment to homeland security is necessary to make the nation safer, and this book lays out a roadmap of how science and engineering can assist in countering terrorism.
