It is clear that the development of large software systems is an extremely complex activity, which is full of various opportunities to introduce errors. Software engineering is the discipline that provides methods to handle this complexity and enables us to produce reliable software systems with maximum productivity. An Integrated Approach to Software Engineering is different from other approaches because the various topics are not covered in isolation. A running case study is employed throughout the book, illustrating the different activity of software development on a single project. This work is important and instructive because it not only teaches the principles of software engineering, but also applies them to a software development project such that all aspects of development can be clearly seen on a project.

The definitive book on leadership in the digital era: why digital technologies call for leadership that emphasizes creativity, collaboration, and inclusivity. Certain ideas about business leadership are held to be timeless, and certain characteristics of leaders—often including a square jaw, a deep voice, and extroversion—are said to be universal. In *Leading in the Digital World*, Amit Mukherjee argues that since digital technologies are changing everything else, how could they not change leadership ideologies and styles? As more people worldwide participate equally in business, those assumptions of a leader's ideal profile have become irrelevant. Offering a radical rethinking of leadership, Mukherjee shows why digital technologies call for a new kind of leader—one who emphasizes creativity, collaboration, and inclusivity. Drawing on a global survey of 700 mid-tier to senior executives and interviews with C-level executives from around the world, Mukherjee explains how digital technologies are already reshaping organizations and work and what this means for leaders. For example, globally dispersed businesses can't reserve key leadership roles for people from exclusive groups; leadership must become inclusive, or fail. Leaders must learn to collaborate in a multipolar world of networked organizations, working with co-located and non-co-located colleagues. Leaders must lead for creativity rather than productivity. Focusing on practice, Mukherjee outlines goals and

strategies, warns against unthinking assumptions, and explains how leaders can identify the mindsets, behaviors, and actions they need to pursue. With *Leading in the Digital World*, Mukherjee offers the definitive book on leadership for the digital era.
