The World** BRILL

Directly relates to current Ukraine crisis. Russia's Black Sea fleet is based in Ukrainian port of Sebastopol (Crimea). This work brings together scholars from a variety of disciplines on a region

vitaly important in current international relations for Europe, Russia and the Near East, offering fresh perspective combining regional 'insiders' and 'outsider' international experts. If ideas of 'civil society' democratisation are Western in nature then how should one examine these trends in a non-Western society? This book presents a variety of experiences of civil

society, looking at representation, participation and power relations in countries such as the Ukraine, Romania, Bulgaria, and the Caucasus area. It is a rare combination of 'insider' perspectives of regional experts and the 'outsider' views of international experts.

Renowned academics compare major features of imperial rule in the 19th century, reflecting a significant shift away from

nationalism and toward empires in the studies of state building. The book responds to the current interest in multi-unit formations, such as the European Union and the expanded outreach of the United States. National historical narratives have systematically marginalized imperial dimensions, yet empires play an important role. This book examines the methods discerned in the creation of the Habsburg Monarchy, the Ottoman Empire, the Hohenzollern rule and Imperial Russia.

It inspects the respective imperial elites in these empires, and it details the role of nations, religions and ideologies in the legitimacy of empire building, bringing the Spanish Empire into the analysis. The final part of the book focuses on modern empires, such as the German "Reich." The essays suggest that empires were more adaptive and resilient to change than is commonly thought.

 A reissue of Sir Steven

Runciman's classic account of the Dualist heretic tradition in Christianity from its Gnostic origins, through Armenia, Byzantium, and the Balkans to its final flowering in Italy and Southern France. The chief danger that early Christianity had to face came from the heretical Dualist sect founded in the mid-third century AD by the prophet Mani. Within a century of his death Manichaean churches were established from western Mediterranean lands to

eastern Turkestan. Though Manichaeism failed in the end to supplant orthodox Christianity, the Church had been badly frightened; and henceforth it gave the hated epithet of 'Manichaean' to the churches of Dualist doctrines that survived into the late Middle Ages.

 There is now a wide spread interest in regions as a key focus in the organization and

governance of economic growth and wealth creation. This important book considers the factors that influence and shape the competitive performance of regions. This is not just an issue of academic interest and debate, but also of increasing policy deliberation and action. However, as the readings in this book make clear, the very idea of regional competitiveness is itself complex and contentious. Many academics and policy makers have used the concept without fully

considering what is meant by the term and how it can be measured. Policy formulation has tended to rush ahead of understanding and analysis, and the purpose of this book is to close this important gap in understanding. This book was previously published as a special issue of *Regional Studies*.

 This book, by one of the world's leading experts on dynamic panel data, presents a modern review of some of the main topics in panel data

econometrics. The author concentrates on linear models, and emphasizes the roles of heterogeneity and dynamics in panel data modelling. The book combines methods and applications, so will appeal to both the academic and practitioner markets. The book is divided in four parts. Part I concerns static models, and deals with the problem of unobserved heterogeneity and how the availability of panel data helps to solve it, error component models, and error in variables in

panel data. Part II looks at time series models with error components. Its chapters deal with the problem of distinguishing between unobserved heterogeneity and individual dynamics in short panels, modelling strategies of time effects, moving average models, inference from covariance structures, the specification and estimation of autoregressive models with heterogeneous intercepts, and the impact of assumptions about initial conditions and

heteroskedacity on estimation. Part III examines dynamics and predeterminedness. Its two chapters consider alternative approaches to estimation from small and large T perspectives, looking at models with both strictly exogenous and lagged dependent variables allowing for autocorrelation of unknown form, models in which the errors are mean independent of current and lagged values of certain conditioning variables but not with their future values.

Together Parts II and III provide a synthesis, and unified perspective, of a vast literature that has had a significant impact on recent econometric practice. Part IV reviews the main results in the theory of generalized method of moments estimation and optimal instrumental variables.

 With a century of solid theory behind it, tax law confronts a new reality: the weakening of the tenacious link between the sovereignty of states

and taxation. Yet it is to the continuity of certain themes and principles inherent in the various national tax systems that tax law scholarship continues to look, even as it develops new principles designed to meet the expanding processes of internationalization. This completely updated collection of essays offers an expert comparative analysis, conducted by a sample of the best international tax law scholars, of the fundamental theory of tax law and of the prospects

in the near future of tax legislative systems. The emphasis falls naturally on tax theory, jurisprudence, and legislative development in the Member States of the European Union (particularly in Italy, Germany, and Spain), where the process of tax harmonization has been under way for many years. The effect of these processes, via the relevant tax treaties, on the tax systems of Japan and the United States provides a secondary emphasis. Practitioners

and academics in tax law will find in this book an invaluable understanding of the challenges that tax law theory strives to meet at this crucial moment in economic history. The essays present a full and reliable exposition of the current theoretical approaches adopted by the various schools of thought in the field, as well as of the main contributions of jurisprudence.

Aquatic Pollutants: Transformation and Biological Effects contains the proceedings of the Second International Symposium on Aquatic Pollutants held at Noordwijkerhout (Amsterdam), The Netherlands on September 26-28, 1977. Organized into 47 chapters, this book first describes the aquatic pollutants and their potential biological effects. Subsequent chapters elucidate chemicals with pollution potential; multidetection

approach to analysis of organic pollutants in water; volatilization of pollutants from water; microbial transformations of aromatic pollutants; and photochemical transformation of pollutants in water. Other chapters address oxidation of organic compounds in aquatic systems; laboratory microcosms for use in determining pollutant stress; continuous biomonitoring systems for detection of toxic levels of water pollutants; and health aspects of water

recycling practices. This book will be useful as a review of existing knowledge in this field. It will also stimulate further thought and research.

 Tsunamis, earthquakes, floods, bird flu, international terrorism - the world seems to get more dangerous by the day. Or does it? John

Withington's disturbing yet fascinating new book describes the worst things that have happened on Earth from the dawn of man to the present day. Part One chronicles all the major natural calamities - floods and earthquakes, volcanic eruptions, hurricanes and typhoons, plague and famine. Part Two describes in compelling detail the greatest man-made disasters - war and invasion, air raids, massacres, riots and terrorism, fires and explosions, shipwrecks,

and air and train crashes. John Withington takes the reader on an epic journey through the annals of the nastiest things to have afflicted mankind. Out of all this horror, he has somehow fashioned a compulsively readable and entertaining book. *The Preobrazhensky Papers* OUP Oxford
Lycurgus, Pericles, Solon, Nicias, Themistocles, Alcibiades, Cimon, Agesilaus, Alexander `I treat the narrative of the Lives as a kind of mirror...The experience is like nothing so much as

spending time in their company and living with them: I receive and welcome each of them in turn as my guest.' In the nine lives of this collection Plutarch introduces the reader to the major figures and periods of classical Greece. He portrays virtues to be emulated and vices to be avoided, but his purpose is also implicitly to educate and warn those in his own day who wielded power. In prose that is rich, elegant and sprinkled with learned references, he explores

with an extraordinary degree of insight the interplay of character and political action. While drawing chiefly on historical sources, he brings to biography a natural story-teller's ear for a good anecdote. Throughout the ages Plutarch's Lives have been valued for their historical value and their charm. This new translation will introduce new generations to his urbane erudition. The most comprehensive selection available, it is accompanied by a lucid

introduction, explanatory notes, bibliographies, maps and indexes. This open access State-of-the-Art Survey describes and documents the developments and results of the Once-Only Principle Project (TOOP). The Once-

Only Principle (OOP) is part of the seven underlying principles of the eGovernment Action Plan 2016-2020. It aims to make the government more effective and to reduce administrative burdens by asking citizens and companies to provide certain standard information to the public authorities only once. The project was horizontal and policy-driven with the aim of showing that the implementation of OOP in a cross-border and cross-sector setting is feasible. The book summarizes the

results of the project from policy, organizational, architectural, and technical points of view.

 'Once we passed the checkpoint at the border, it hit me. I was like, Holy Shit, this is it, I'm entering a combat zone. Cool!' At twenty-six Colby Buzzell, unemployed and living at home, decided to join the US Army. Within months he was in Iraq, a machine gunner in the controversial Stryker Brigade Combat Team, an army unit on the cutting edge of combat technology and the first of its kind. Trapped amid 'guerrilla warfare, urban-style' in Mosul, Iraq,

Buzzell was struck by the bizarre and often frightening world surrounding him. He began writing a blog describing the war - not as being reported by CNN or official briefings - but as experienced by the soldier on the ground. His story is a brutally honest and hard-hitting account of the absurdities of modern war. These are the real stories of the war: a firefight where the resistance came from 'men in black'; a night spent chain-smoking in the guard tower counting

the tracer bullets being fired over the city; and the hesitation of a young soldier who had been passed around from platoon to platoon

because he was too afraid to fight. My War is a powerful story of a young man and a war, unlike any you have read before.
