Thank you for reading our PRINCE2 Foundation Training Manual. The main objective of this book is to provide an easy-to-read and easy-to-understand PRINCE2(R) Foundation training manual. The official PRINCE2 manual, "Managing Successful Projects with PRINCE2," is an excellent reference manual, but it is not a training manual and should not be used as one, as it is very difficult to comprehend and understand if you are new to project management. The official PRINCE2 manual also covers the complete Practitioner Syllabus, and it's impossible to know which parts are just focused on the PRINCE2 Foundation syllabus, so you have to read everything, which is not good if you are just studying for the foundation exam. Henceforth, this book is meant to be (and is) an easy introduction to PRINCE2 based on the Foundation syllabus, and it's quickly becoming the most read book for people wishing to learn about PRINCE2 and prepare for the foundation exam.

Riley Blakely and the remainder of Grandview High's french class is heading out on a school trip to Paris. The three weeks in Paris are supposed to be an 'educational opportunity' for this lot. But of course, these hormonal teenagers just cannot abide by the rules. The one rule set by their lovely Mr. Walker: You cannot room with somebody of the opposite gender. So what does this french class do? Room with the opposite gender, with a funny way of picking roommates. Chit picking. Because hormonal teenagers can just never get enough. Insert Asher West. Her not so secret annoying hater. It's a hate-hate relationship. He's the guy who picked Riley's name. He's the most popular guy in the freaking school and Riley? Not so much. Put the two together and you'll get a whole lot of arguments and awkward moments. They're roommates and they're stuck in Paris, the city of love and the city of lights

This book examines the regulatory framework, regulatory objectives, regulatory logics, regulatory instruments, regulatory failures, and regulatory responses in China's financial market after the global financial crisis. The book provides an in-depth analysis of China's contemporary financial regulatory system, focusing on risks, regulation, and policies in practice. By drawing on public and private interest theories relating to financial regulation, the book contends that the controlled development of the banking sector, and the financial sector generally, has transformed China's banks into more market-oriented institutions and increased public sector growth. However, China's financial market and financial regulation have some inherent weaknesses and deficiencies. This book also offers insights into how this can be improved or adapted to minimize systemic risks in China's financial sector. This book tries to prove that financial regulation is not just a vehicle for maintaining efficient financial markets but a primary tool through which the Chinese government achieves its political and economic objectives. More fundamentally,

according to the law and finance theory, strong market and vibrant judicial systems are needed to further modernize China's financial markets and market economy. The book will be a useful reference for anyone interested in learning from the Chinese experience.

This is a translation of an important classic on Zen swordfighting. Yagyu's Buddhist spirituality is reflected in his central idea of the 'life-giving sword' - the notion of controlling an opponent by the spiritual readiness to fight, rather than during the fight. This is a translation of an important classic on Zen swordfighting. Yagyu Munenori was so widely renowned that he was appointed official sword instructor to two Tokugawa shoguns. Ever since humans became self-aware, we have struggled to find the meaning of life. The price we paid for becoming intelligent was to become painfully ignorant of the difference between good and evil. Adi, a 10-year-old boy, works together with two old philosophers as they try to unravel the prophecy of a promised King. With insatiable curiosity, Adi must work with the wise men as they rationalize with each other on why and how humans became intelligent. Together they attempt to answer some of the most profound questions related to existence. Does evolution end with human beings or is there an 'Overman' who can reach evolution's pinnacle? Will this Overman be able to define values for humankind? Centuries later a young boy promises his mother that he will always uphold the love that she has taught him. It is a promise that drowns him in the nectar of the gods. Krish grows up to be an engineer and joins a team of scientists as they try to create artificial consciousness in a machine. Krish soon realizes

that he has a bigger fight on his hands. A fight to preserve love in a desolate world. His quest for true love ultimately leads him down a path where he comes face to face with a fearsome snake delivering a kiss of death. Humans have come a long way by questioning the nature of objects around us and pushing the limits of our intelligence, but it's now time that we ask the greatest question yet: when does intelligence transcend to become consciousness?

Arthritis, psoriasis and related rheumatic diseases are an enormous and growing problem throughout the world, with as many as 80 million people suffering from one or another of these conditions. Patients seeking help or relief from their own doctors or hospitals are often informed that they will simply have to live with the problem and that little can be done. In this book, Jan de Vries shows how the problems can be reversed by a simple nutritional and natural approach in which there are none of the terrible side effects that can sometimes accompany a course of drugs. Arthritis, Rheumatism and Psoriasis draws attention to a great variety of home remedies, from homeopathy to herbs, and places particular emphasis on diet as a source of cure.

A stand-alone novella from New York Times bestselling author Elizabeth Hoyt! Miss Mary Whitsun is far too intelligent to fall for the rakish charms of a handsome aristocrat. But when the gentleman in question approaches her in a bookshop, mistaking her for his fiancée, Lady Johanna Albright, the flirtatious encounter only raises more questions. Could Mary, a servant raised in a St Giles orphanage, actually be Lady Joanna's long-lost twin sister? If so, Mary has been betrothed since birth—to the rakishly handsome aristocrat himself. . . . Henry Collins, Viscount Blackwell, is far too intrigued by Mary to let her go so easily. He's drawn to her sharp mind, indomitable spirit, and the fiery way in which she dismisses him—ladies simply don't dismiss Lord Blackwell. But as Mary makes her first hesitant steps into society, she can't help but wonder if she truly has a place in Henry's world—or in his heart.

Poetry. Aboriginal Australian Studies. Through a series of compact lyrics, Ali Cobby Eckermann's RUBY MOONLIGHT tells the story of a young Aboriginal woman in the late nineteenth century who survives the massacre of her entire family. Wandering alone through Ngadjuri land, in South Australia, she encounters a luckless Irish trapper whose loneliness matches her own. Drawn

together for comfort, they discover a momentary paradise along riverbanks and across arid plains that proves fragile in the face of frontier violence and colonization. "These innovative poems take up traditional narrative voices, bringing past conflicts vividly to life with short lines that are lucid, refined, and luminous. Colonialism and survival are set against the natural world, love, and the desire for human engagement. The writing is delicate yet strong, the tone is pitched so well the reader is not distracted by the agile technique that carries the narrative forward."—Judges' citation, New South Wales Book of the Year Award

Converting from a carbureted fuel system to electronic fuel injection (EFI) improves the performance, driveability, and fuel economy of any classic vehicle. Through a series of sensors, processors, and wires, it gathers engine and atmospheric information to precisely deliver the correct amount of fuel to your engine. With a carburetor, you must manually adjust and change parts to adapt it to differing conditions and applications. Installing a complete aftermarket EFI system may seem too complex, but it is within your reach by using the clear and easy-to-understand, step-by-step instructions. You will be able to confidently install the correct EFI system in your vehicle and enjoy all the benefits. A variety of EFI Systems are currently available--throttle body injection (TBI), multi port fuel injection (MPFI), stack systems, application specific, and special application systems. Author Tony Candela reveals the attributes of each, so you can select the system that's ideal for your car. Author Tony Candela explains in exceptional detail how to install both of these systems. To achieve top performance from an EFI system, it's not a simple bolt-on and plug-in procedure. This book takes the mystery out of EFI so it's not a black art but rather a clear working set of parameters. You are shown how to professionally install the injectors into the intake system as well as how to integrate the wiring into the main harness. In addition, each step of upgrading the fuel system to support the EFI is explained. The book also delves into integrating ignition and computer control with these aftermarket systems so you can be out driving rather than struggling with tuning. Turbocharged, supercharged, and nitrous applications are also covered. A well-installed and -tuned EFI system greatly improves the performance of a classic V-8 or any engine because the system delivers the correct fuel mixture for every operating condition. Get faster starts, better fuel economy, and crisp efficient performance. In *EFI Conversions: How to Swap Your Carb for Electronic Fuel Injection*, achieving all these benefits is easily within your reach.

Tree species are indispensable to support human life. Due to their long life cycle and environmental sensitivity, breeding trees to suit day-to-day human needs is a formidable challenge. Whether they are edible or industrial crops, improving yield under optimal, sub-optimal and marginal areas calls for uni?ed efforts from the s-entistsaroundtheworld.

In this book, Dr. Li and his author team plan to emphasize why mouse models are useful in vivo systems for understanding disease mechanisms and developing therapeutic strategies in blood cancers. The authors do not intend to cover all types of blood cancers; instead, they will focus on some major ones such as leukemias and lymphomas. However, the authors will try to cover as much as they can the cancer types and point out that many blood cancers need to be studied in mouse disease models although they are still not available at present. A major focus in the book will be to show what we can or cannot learn from mouse disease models and to also show the critical contributions of mouse models in therapeutic drug development.
