Spon's Mechanical and Electrical Services Price Book 2005 is still the only annual services engineering price book available anywhere. This annual guide to pricing electrical and mechanical services installation contains material prices, labour elements and measured works prices for mechanical contracts from pipework to ductwork and heating systems to air conditioning. Electrical contacts are also covered, from power supply through to light switches. Updates to the 2005 edition will provide a general review of all sections, include pipe-in-pipe, plastic piping for chilled and heating water, and give an expanded coverage of heat exchanges and condensing boilers. Its free CD

Spon's Mechanical and Electrical Services Price Book 2003 is still the only annual services engineering price book available

anywhere. This annual guide to pricing electrical and mechanical (HEVAC) services installation contains material prices, labour elements and measured works prices for mechanical contracts from pipework to ductwork and heating systems to air conditioning. Electrical contacts are also covered, from power supply through to light switches. The M&E comes with a 'free' CDROM that enables the reader to view the entire book on screen, cut and paste prices into other tender documents, export to other major packages, perform simple calculations, index search, produce estimate and tender documents, adjust rates and data. With the added bonus of the Approximate Estimating sections enabling quick, rule-of-thumb pricing, with detailed data and analysis, the 2003 edition of the Mechanical and Electrical Services Price Book provides the definitive estimating toolkit for the construction, building and surveying industries. New Features for 2003 The approximate estimating section now includes: Wider range of building types for both elemental and all-in m2 rates All-in rates for pipework In the Measured works section: The electrical section is now in line with the CAWS that SMM7 follows Added information on access control and security detection and alarm The mechanical section includes more information on plant and equipment (i.e. chillers and heat rejection equipment, condensing boilers, terminal units, under floor heating, BMS and controls, and fire rated ductwork).

The Southern Railway between 1923 and 1939 was the only British company to carry out a sustained programme of

electrification which became known as the Southern Electric. Unlike many recent projects, each incremental step was completed on time and within budget. This successful project was more impressive as it was achieved during a period of economic stagnation (including the 'great depression') and despite government disapproval of the method of electrification. The driving force behind this endeavor was the railway's general manager, Sir Herbert Walker, but at his side was his electrical engineer, Alfred Raworth, the man one journalist described as an 'electrification genius'. Alfred Raworth's career began working with his father the eminent consulting engineer and entrepreneur, John Smith Raworth. Following the collapse of his father's business Alfred joined the railway industry and devised an ambitious and innovative electrification design. This was discarded when the railways of southern England were 'grouped' into the Southern Railway after which he took responsibility for the implementation of the electrification schemes. With Walker's retirement in 1937, those who continued to support steam traction took the policy lead. A marginalised Raworth retired but was later to witness the fruition of many of his discarded ideas.

A fascinating look at the making of the Titanic in vivid, colorful detail. A skilled workforce of thousands spent years building the ship in a remarkable feat of design and engineering. From the engine room to the ball room, here is the story of the riveters, engineers, electricians, carpenters, cabinet makers, and artisans who designed, built, and fitted the "ship of dreams."

Annual Report of the Commissioner of Patents for the Year ...

This book is designed to serve as a resource for exploring and understanding basic electrical engineering concepts, principles, analytical and mathematical strategies that will aid the reader in progressing their electrical engineering knowledge to intermediate or advanced levels. The study of electrical engineering concepts, principles and analysis techniques is made relatively easy for the reader by inclusion of most of the reference data, in form of excerpts from different parts of the book, within the discussion of each case study, exercise and self-assessment problem solution. This is done in an effort to facilitate quick study and comprehension of the material without repetitive search for reference data in other parts of the book. To this new edition the author has introduced a new chapter on batteries where the basic, yet important, facets of the battery and its sustainable and safe operation is covered. The reader will be shown the not-so-obvious charging and discharging performance characteristics of batteries that can be determining factors in the selection, application and optimal performance of batteries.
